I Decision-making under uncertainty: general theory	1
1 Axiomatic theories of choice, cardinal utility and subjective probability: a review	3
1 Historical perspective	4
2 The conceptual framework	6
2.1 About events	7
2.2 About consequences	8
2.3 About constant acts	8
3 Axioms of a normative theory	9
4 Objections to the normative appeal of the axioms	13
5 Merits and limitations of the theory	15
5.1 Relevance	15
5.2 Usefulness	16
5.3 Generality	17
5.4 Integration with other theories	18
5.5 Overall evaluation	19
6 Link with economic applications	20
References	21
2 Decision theory with moral hazard and state-dependent preferences	23
1 Introduction	23
1.1 Scope and example	23
1.2 Moral hazard	26

1.3	State-dependent preferences	27
1.4	Organisation and concepts	30
2	The model and notation	32
3	The von Neumann–Morgenstern theorem	34
4	The Anscombe–Aumann theorem	35
5	Value of information and equipotence	39
6	Decision theory with state-independent preferences and moral hazard	42
6.1	Constant games are omnipotent	42
6.2	Generalised moral expectation theorem	43
6.3	Equipotence and probabilities	46
6.4	Conditional values and subjective probabilities	48
7	Properties of the set of attainable probabilities	50
7.1	Dimensionality of P	50
7.2	Finitely many pure strategies	52
8	Decision theory with state-dependent preferences and moral hazard	54
8.1	Conditional preferences and conditional utilities	54
8.2	Main results	61
8.3	Elicitation and identification of subjective probabilities	64
8.4	Identification of omnipotent games	66
8.5	Null states	67
9	Comments	67
9.1	State-dependent and conditional preferences	67
9.2	Random devices	69
9.3	Value of information	70
9.4	Implications for game theory	72
9.5	Strategies	73
9.6	Constant utility games	74
9.7	Small worlds	74
	Appendix A	76
	Appendix B	82
	Appendix C	86
	Appendix D: Assumptions and definitions	88
	References	88
3	Logical foundations of cardinal utility and subjective probability	90
1	A formal model	90
2	Definition of utility and probability	90
3	Interpretation of the basic concepts	90
4	Savage's interpretation and a difficulty	91
5	State-dependent consequences and preferences	92

6	Identification of utility and probability	92
7	The ordering of consequences	93
8	Moral hazard and the ordering of consequences	93
9	Moral hazard and the definition of events	94
10	Moral hazard and identification	95
11	Equipotence	95
12	Towards a more general theory	96
13	Notation and definitions	97
14	Theory of choices among immediate lotteries	98
15	Equipotence classes and theory of choices among delayed lotteries	99
16	Theory of subjective probability and utility	100
17	Summary and conclusions	101
