INTRODUCTION

1.1	Overview of Multivariate Analysis	3
1.2	Elementary Matrix Algebra	15
1.3	Computer Usage and FORTRAN	20
1.4	Exercises	26
1.5	Some Basic Background References	27

2.1	Vector Random Variables	29
2.2	Multivariate Normal Distributions	35
2.3	Reduction of Data to Sample Estimates	39
2.4	The CORREL Program	40
2.5	Numerical Example	42
2.6	Exercises	45

STUDIES OF A SINGLE POPULATION

3.1	Mathematics of Multiple Correlation	49
3.2	Rank, Inverse, and Determinant	57

3.3	The MATINV Subroutine	60
3.4	The MULTR Program	66
3.5	Examples of Multiple Correlation	71
3.6	Polynomial Curve Fitting	76
3.7	The POLY Program	81
3.8	Examples of Polynomial Curve Fitting	85
3.9	Exercises	94
4	Principal Components	
4.1	Mathematics of Principal Components	96
4.2	Numerical Example of Principal Components	110
4.3	Research Example	114
4.4	The PRINCO Program	115
4.5	Eigenstructure of a Symmetric Matrix	118
4.6	The HOW Subroutine	123
4.7	Exercises	128
5	Selected Factor Analysis Procedures	
5.1	Introduction to Factor Analysis	129
5.2	Extraction of Arbitrary Orthogonal Factors	137
5.3	Analytic Orthogonal Rotation	144
5.4	The Distribution of Errors for a Factor Model	149
5.5	Scoring Factors: Programs COEFF and FSCOR	151
5.6	Research Example	161
5.7	Exercises	167
6	Canonical Correlation	
6.1	Mathematics of Canonical Correlation	168
6.2	Numerical Example of Canonical Correlation	176
6.3	Research Examples	179
6.4	Eigenstructure of a Nonsymmetric Matrix	192
6.5	The CANON Program	194
6.6	The DIRNM Subroutine	198
6.7	Exercises	200
7	Multiple Partial Correlation	
7.1	Mathematics of Multiple Partial Correlation	201
7.2	Numerical Example of Partial Correlation	204

7.3	Research Examples	205
7.4	The PARTL Program	217
7.5	Exercises	220

Part III

MULTIPLE POPULATION STUDIES

8	Multivariate Analysis of Variance	
8.1	Mathematics of Multivariate Analysis of Variance	223
8.2	Numerical Example	230
8.3	Examples of Multivariate Analysis of Variance	232
8.4	The MANOVA Program	238
8.5	Exercises	241
9	Discriminant Analysis	
9.1	Mathematics of Discriminant Functions	243
9.2	Numerical Example of Discriminant Analysis	250
9.3	Research Example	255
9.4	The DISCRM Program	258
9.5	Exercises	261
10	Classification Procedures	
10.1	Mathematics of Classification Statistics	262
10.2	Monte Carlo Study of Classification Statistics	270
10.3	Numerical Example of Classification	272
10.4	Research Examples	274
10.5	The CLASIF Program	283
10.6	Exercises	286
11	Multiple Covariance Analysis	
11.1	Mathematics of Multiple Covariance	287
11.2	Numerical Example of COVAR	290
11.3	Research Example	292
11.4	The COVAR Program	295
11.5	Exercises	298
12	Factorial Discriminant Analysis	
12.1	Mathematics of Factorial Discrimination	299
12.2	Numerical Example of Factorial Discriminant Analysis	302

12.3	Example of Factorial Discriminant Analysis	309
12.4	The FACDIS Program	316
12.5	Exercises	323
13	Strategy Considerations in Multivariate Research	
13.1	Program Sequences	329
13.2	Exercises	330
	References	333
	Appendices	341
	A. Statistical Tables	341
	B. TALENT Data	345
	C. RECTANGLES Data	358
	Index	361
