London and Philadelphia

1984

Contents

Preface	v
Chapter 1. Introduction	1
1.1. The changing structure of the haulage industry	1
1.2. The concept of fatigue	4
1.3. An outline of the contents	8
Chapter 2. Conditions of work	9
2.1. Introduction	9
2.2. Legislation	10
2.3. Hours and schedules of work	15
2.4. Exposure to noise	25
2.5. Vibration	39
2.6. Temperature and ventilation	51
2.7. Exposure to carbon monoxide	55
2.8. Drivers' assessment of their occupational conditions	56
2.9. Aspects of the career of the truck driver	60
2.10. Summary and conclusions	63
Chapter 3. Accidents	67
3.1. Introduction	67
3.2. General levels of safety in the haulage industry	67
3.3. Fatigue, falling asleep and the nature of accidents	72
3.4. Accidents and the time factor—hours of work and time of day	75
3.5. Concluding remarks	83
Chapter 4. The skill of driving	85
4.1. Introduction	85
4.2. Driving as a dual-tracking task	89
4.3. The vigilant driver	104

4.4. Interacting with other vehicles	115
4.5. The mental demands of driving	127
4.6. Concluding remarks	132
Chapter 5. The physiological status of the driver	137
5.1. Introduction	137
5.2. Heart rate	139
5.3. Heart-rate variability	146
5.4. Changes within the ECG cycle	150
5.5. Skin conductance	150
5.6. Electroencephalogram variations	153
5.7. Endocrine response	156
5.8. Critical flicker fusion frequencies	159
5.9. Somatic measures—electro-oculogram, electromyogram and postural changes	160
5.10. Summary and conclusions	160
Chapter 6. The experience of fatigue	165
Chapter 7. Conclusions and criticisms	175
7.1. Introduction	175
7.2. Main conclusions	175
7.3. General criticisms	179
7.4. A brief history of fatigue research	180
7.5. Practical implications of research	184
References	191
Index	215
