| <b>List of symbols and abbreviations</b>                      | xv |
| <b>1 Introduction</b>   | 1  |
| 1.1 Nuclear magnetic resonance                                | 1  |
| 1.1.1 NMR and the spinning top                                | 2  |
| 1.1.2 NMR spectroscopy  | 3  |
| 1.1.3 NMR imaging   | 5  |
| 1.1.4 NMR imaging in biomedicine                              | 8  |
| 1.1.5 Contrast in NMR imaging                                 | 8  |
| 1.1.6 NMR imaging in materials science                        | 9  |
| 1.1.7 Equipment   | 11 |
| 1.2 About this book   | 12 |
| 1.2.1 The NMR signal in the presence of slow molecular motion | 12 |
| 1.2.2 Literature  | 15 |
| 1.2.3 The contents of this book                               | 15 |
| <b>2 Fundamentals</b>   | 17 |
| 2.1 Magnetic fields   | 17 |
| 2.1.1 Homogeneous magnetic fields                             | 18 |
| 2.1.2 Magnetic-field gradients                                | 19 |
| 2.2 Principles of NMR   | 22 |
| 2.2.1 An NMR primer   | 23 |
| 2.2.2 Spin-system response from quantum mechanics             | 44 |
| 2.3 Hardware  | 51 |
| 2.3.1 Overview of basic components                            | 51 |
| 2.3.2 The magnet  | 52 |
| 2.3.3 The transmitter side                                    | 56 |
| 2.3.4 The receiver side                                       | 61 |
| <b>3 NMR spectroscopy</b>                                     | 67 |
| 3.1 Anisotropic nuclear spin interactions                     | 69 |
| 3.1.1 Interaction Hamiltonians                                | 69 |
| 3.1.2 General formalism                                       | 74 |
| 3.1.3 Strong magnetic fields                                  | 75 |
| 3.1.4 Orientation dependence of the resonance frequency       | 78 |

|          |   |            |
|----------|---|------------|
| 3.2      | Wideline NMR  | 79         |
| 3.2.1    | Molecular order                                     | 80         |
| 3.2.2    | Molecular reorientation                             | 85         |
| 3.3      | High-resolution solid-state NMR                     | 91         |
| 3.3.1    | Cross-polarization                                  | 92         |
| 3.3.2    | High-power decoupling                               | 96         |
| 3.3.3    | Sample spinning                                     | 96         |
| 3.3.4    | Multi-pulse methods                                 | 107        |
| 3.4      | Echoes  | 112        |
| 3.5      | Relaxation  | 118        |
| 3.5.1    | Liquids   | 118        |
| 3.5.2    | Solids and slow motion                              | 121        |
| 3.5.3    | Spin diffusion                                      | 123        |
| <b>4</b> | <b>Transformation, convolution, and correlation</b> | <b>125</b> |
| 4.1      | Fourier transformation                              | 126        |
| 4.2      | Convolution   | 129        |
| 4.2.1    | Linear systems                                      | 129        |
| 4.2.2    | Nonlinear systems                                   | 130        |
| 4.2.3    | The convolution theorem                             | 132        |
| 4.3      | Correlation   | 133        |
| 4.3.1    | Linear system analysis                              | 133        |
| 4.3.2    | Nonlinear cross-correlation                         | 134        |
| 4.3.3    | The correlation theorem                             | 135        |
| 4.4      | Further transformations                             | 135        |
| 4.4.1    | Laplace transformation                              | 136        |
| 4.4.2    | Hankel transformation                               | 136        |
| 4.4.3    | Abel transformation                                 | 137        |
| 4.4.4    | z transformation                                    | 139        |
| 4.4.5    | Hadamard transformation                             | 139        |
| 4.4.6    | Wavelet transformation                              | 141        |
| <b>5</b> | <b>Concepts of spatial resolution</b>               | <b>144</b> |
| 5.1      | Point methods                                       | 145        |
| 5.1.1    | FONAR   | 145        |
| 5.1.2    | The sensitive-point method                          | 147        |
| 5.2      | Line methods  | 148        |
| 5.2.1    | The multiple sensitive-point method                 | 148        |
| 5.2.2    | Line-scan methods using selective excitation        | 148        |
| 5.3      | Selective excitation                                | 148        |
| 5.3.1    | Excitation and response                             | 151        |
| 5.3.2    | Shaped pulses                                       | 154        |
| 5.3.3    | Composite pulses                                    | 160        |
| 5.3.4    | Pulse sequences                                     | 163        |
| 5.3.5    | Solid-state techniques                              | 166        |

|          |   |            |
|----------|---|------------|
| 5.4      | Magnetization in field gradients              | 169        |
| 5.4.1    | Linear and nonlinear responses                | 170        |
| 5.4.2    | Position: $k$ space                           | 173        |
| 5.4.3    | Velocity: $q$ space                           | 178        |
| 5.4.4    | Acceleration: $\varepsilon$ space             | 195        |
| <b>6</b> | <b>Basic imaging methods</b>                  | <b>199</b> |
| 6.1      | Reconstruction from projections               | 200        |
| 6.2      | Fourier imaging                               | 208        |
| 6.2.1    | The spin-warp technique                       | 208        |
| 6.2.2    | Multi-slice imaging                           | 213        |
| 6.2.3    | 3D imaging                                    | 214        |
| 6.2.4    | Spectroscopic imaging                         | 215        |
| 6.2.5    | Stimulated-echo imaging                       | 218        |
| 6.2.6    | Imaging with CPMG echoes                      | 221        |
| 6.2.7    | Gradient-echo imaging                         | 223        |
| 6.2.8    | Ultra-fast imaging                            | 224        |
| 6.3      | Imaging in the rotating frame                 | 231        |
| 6.4      | Imaging with noise excitation                 | 235        |
| <b>7</b> | <b>Contrast</b>                               | <b>244</b> |
| 7.1      | Image contrast                                | 245        |
| 7.1.1    | Optimization of contrast                      | 245        |
| 7.1.2    | Magnetization filters; parameter weights      | 246        |
| 7.1.3    | Transfer functions and mobility filters       | 246        |
| 7.1.4    | Parameter contrast                            | 248        |
| 7.1.5    | Contrast parameters                           | 252        |
| 7.1.6    | NMR parameters and material properties        | 253        |
| 7.2      | Filters                                       | 262        |
| 7.2.1    | $T_1$ filters                                 | 263        |
| 7.2.2    | $T_2$ filters                                 | 266        |
| 7.2.3    | $T_{1\rho}$ filters                           | 268        |
| 7.2.4    | Chemical-shift filters                        | 270        |
| 7.2.5    | Susceptibility contrast                       | 273        |
| 7.2.6    | Translational diffusion and transport filters | 276        |
| 7.2.7    | Local-field filters                           | 288        |
| 7.2.8    | Combination filters                           | 294        |
| 7.2.9    | Morphology filters                            | 297        |
| 7.2.10   | Multi-quantum filters                         | 300        |
| 7.2.11   | Homonuclear magnetization-transfer filters    | 307        |
| 7.2.12   | Heteronuclear magnetization-transfer filters  | 310        |
| 7.3      | Spectroscopic parameters                      | 315        |
| 7.3.1    | 1D spectroscopy                               | 316        |
| 7.3.2    | Multi-dimensional spectroscopy                | 320        |

|           |  |            |
|-----------|--|------------|
| 7.4       | Sample manipulation  | 323        |
| 7.4.1     | Temperature variation  | 324        |
| 7.4.2     | Magnetic field distortions   | 324        |
| 7.4.3     | Contrast agents  | 326        |
| 7.4.4     | Noble gases  | 327        |
