Codes

Computer memory

The binary number system

Physical memory devices

Addressing memory

Memory contents: Data types	97	
Distinguishing field types	98	
Summary	99	
COMPUTER LOGIC:		C
THE CENTRAL PROCESS	SING UNIT	C
The central processing unit: Basic functions	102	
Machine instructions	103	
The stored-program concept	104	
The computer's instruction set	105	
Registers	107	
A computer: The whole package	108	
Memory contents	109	
The memory, or machine, cycle	109	
Tying in input/output	114	
Computer systems	117	
Electronics	119	
Boolean logic (Optional)	120	
Integrated circuits (Optional)	120	
Summary	128	
SOFTWARE:		-
PROBLEM DEFINITION AND	<b>PLANNING</b>	. 4
Software: Basic concepts	132	
The programming process	133	
Problem definition	133	
Planning	134	
Detailed planning	136	

)

Flowcharting	137	
Decision tables	141	
Program planning: A summary	144	
Structured programming	145	
The top-down approach	147	
Implementation and maintenance	147	
Summary	148	
SOFTWARE:		$\sim$
PROGRAMM	ING	8
The programming process	150	
An instruction	151	
A single logical operation: Adding two numbers	152	
An assembler program	154	
Compilers	156	
Program logic	158	
BASIC	158	
FORTRAN	164	
COBOL	169	
Assembler language	174	
The compilation process	180	
The programming process: A summary	181	
The cost of a program	182	
Language selection	183	
Summary	184	
THE COMPU System	TER	S
The hardware system	188	
The program	188	
The computer system with a stored program	196	
Getting started	197	
Program execution	198	
Finishing	206

#### FILE PROCESSING

#### SEQUENTIAL FILE PROCESSING AND MAGNETIC TAPE

10

Characters, fields, records, and files 216

Updating checking accounts 217

Other examples of record-keeping applications 221

Characteristics of the master-file update problem 223

Magnetic tape 223

Sequential access methods 232

The linkage editor 233

Secondary storage 234

Summary 235

#### FILE PROCESSING AND DIRECT ACCESS STORAGE DEVICES

11

Sequential files and batch processing 238

;

The need for on-line systems 239

Direct access 241

Modern mass storage systems 242

Magnetic drum 244

Magnetic disk 245

The economics of data storage 251

What's the best data storage device? 253

Trends in data storage 254

Summary 254

#### DATA MANAGEMENT

Data management 258

Locating files 258

The relative record address 259

Sequential files on a direct access device	262	
Direct access	262	
Indexed sequential files	265	
Future approaches	267	
The link to software: The access method	268	
Data base management	270	
What's the best file organization?	272	
Summary	274	
INFORMATION SYSTEMS		PART
SYSTEMS AND System anal	YSIS	13
What is a system?	280	
The total-system point of view	284	
Systems analysis	287	
The top-down approach	291	
Where do we go from here?	292	
Summary	293	
MULTIPROGRAMM	IING,	
TIME-SHARING,	-	1/1
AND SYSTEM SOFTW		1—
First-generation computers	296	
The second generation and modern minicomputers	296	
Setup and the value of scheduling	297	
Compilation and the use of libraries	300	
I/O device speeds versus computer processing speeds	301	
System software	303	
The third generation	304	
CPU versus I/O speed in the current generation	304	
Multiprogramming	306	
Operating systems	309	
Time-sharing	315	

The importance of a channel	317	
Cycle stealing	317	
Summary	317	
MODERN SYSTEM SOFTW	ARE	1
Memory management	320	
Time-shared systems	328	
Data communication monitors	331	
Data as a resource	333	
Management information systems	337	
Commercial software	338	
Other common software packages	338	
Assigning partitions	339	
Constraints on the programmer	340	
Some final comments on hardware	342
