# CONTENTS

PREFACE	i
<b>1 WATER, A MULTI-DIMENSIONAL RESOURCE</b>	1
1.1 Introduction	1
1.2 Water resources planning	4
1.3 Multi-dimensional management	5
1.4 The age of man	8
1.5 Stress	10
1.6 International policy	14
1.7 Climate change	16
1.8 The oceans	18
References	19
<b>2 WATER RESOURCES ASSESSMENT</b>	21
2.1 Introduction	21
2.2 Network design	22
2.3 Streamflow gauging	27
2.3.1 Weir design	28
2.3.2 Gauges	32
2.3.3 Current gauging	33
2.3.4 Salt dilution	35
2.4 Hydrological modelling	36
References	38
<b>3 DROUGHT MANAGEMENT</b>	41
3.1 Definition of drought	41
3.2 Reservoir yield analysis	42
3.2.1 Definitions	43
3.2.2 Mass flow methods	44
3.2.3 Simulation of reservoir operation	45
3.2.4 Storage-draft-frequency analysis	46
3.3 Operating rules	48
3.4 Probability matrix methods	50
3.4.1 Mutually Exclusive Model	50
3.5 Queuing theory	54
3.6 Conjunctive use of alternative sources	57
3.7 Artificial recharge	59
3.8 Case study	62
References	63
<b>4 FLOOD MANAGEMENT</b>	65
4.1 Factors affecting flooding	65
4.2 Flood calculations	66
4.3 Hazard assessment	68
4.4 Analysis of rainfall depth, duration and frequency	70

4.5	Indices of flood magnitude	71
4.5.1	Probability	71
4.5.2	Rainfall	73
4.5.3	Flood parameters	73
4.6	Flood management	74
4.7	Reservoir routing methods	79
4.8	Flood risk analysis	82
4.9	Flood plain management	83
4.9.1	Hazards associated with flooding	84
4.10	Integrated flood plain management	84
4.10.1	Alternative planning zones	86
4.10.2	Warning systems	87
	References	88
5	EFFECTS OF CATCHMENT DEVELOPMENT ON RUNOFF	89
5.1	Effects of urbanisation	89
5.2	Stormwater management	90
5.2.1.	Effects on recurrence interval	93
5.3	Case studies	95
5.3.1	Example: Calculation of peak runoff for various conditions	97
5.4	Detention storage	104
5.4.1	Channel storage	105
5.4.2	Town planning	109
5.5	Water quality	109
	References	111
6	GROUNDWATER	113
6.1	The extent of groundwater	113
6.2	Flow of groundwater	115
6.2.1	Groundwater parameter	117
6.3	Ground water and well hydraulics	119
6.3.1	Steady radial flow to a well	119
6.3.2	Unsteady radial flow to a well	120
6.4	Groundwater modelling	121
6.5	Groundwater pollution	123
6.5.1	Dispersion	126
6.5.2	Finite difference solution	129
6.6	Groundwater protection	130
	References	131
7	WATER QUALITY AND THE ENVIRONMENT	133
7.1	Water pollution	133
7.1.1	Public health	134
7.2	Water quality standards	135
7.3	Stormwater pollution	136
7.4	Eutrophication of receiving waters	139
7.5	Mass balance	140
7.5.1	Mixed and plug flow	140
7.5.2	Systems analysis	144

---

7.5.3	Non-conservative parameters	144
7.5.4	Mass balance equation with non-conservatives	145
7.5.4	Oxygen balance in rivers	147
7.6	Numerical methods	149
7.6.1	Two-step method	150
7.6.2	Demonstration of numerical inaccuracy	151
7.6.3	Implicit finite difference schemes	153
7.7	Soil erosion	154
7.7.1	Desertification	156
7.7.2	Reservoir sedimentation	158
7.8	Environmental and social impact assessment	160
7.8.1	Impacts on water and related sources	162
7.8.2	Impacts on land and related resources	164
7.8.3	Impacts on public health	164
7.8.4	Socio-economic impacts	164
7.8.5	Impacts of dams	165
	References	165
8	WATER USE	167
8.1	Domestic and urban use	167
8.1.1.	Volumes required	169
8.1.2	Consumption pattern	171
8.2	Water demand projections	171
8.2.1	Statistical analysis	172
8.2.2	Planning alternatives	175
8.2.3	Disruptions	175
8.3	Hydro electric power	176
8.3.1	Pumped storage	177
8.4	Energy calculations	178
8.4.1	Example	178
8.5	Development factors	179
8.5.1	Economics of hydropower development	180
8.6	Machine selection	181
8.7	Small hydro	183
8.8	Irrigation	187
8.8.1	Impact of irrigation	187
8.8.2	Irrigation technology	190
8.8.3	Water requirements	192
8.8.4	Factors and objectives in the selection of emitters	194
8.9	Passive use	195
	References	195
9	DEMAND MANAGEMENT	197
9.1	Balancing supply and demand	197
9.2	Economic theory of supply and demand	199
9.2.1	Effect of metering	201
9.3	Management by use of tariffs	201
9.4	Timing	203
9.4.1	Long-term (planning and design)	203

9.4.2	Operational time-frame	204
9.4.3	Crisis management	206
9.4.4	Notes on management by use of tariffs	207
9.5	The cost of water	207
9.5.1	Future trends	211
9.6	Economic value of water	212
9.7	Loss control	212
9.8	Water harvesting	215
	References	215
10	<b>HYDRAULIC STRUCTURES</b>	217
10.1	The purpose of hydraulic structures	217
10.2	Measurement structures	218
10.3	Dams	220
10.4	Effects of construction of dams	223
10.4.1	Large dams	223
10.4.2	Problems associated with large dams	225
10.5	Dam construction	227
10.5.1	Impacts during planning and construction	228
10.5.2	Impacts in the catchment	230
10.5.3	Building power lines, canals, roads, etc.	230
10.5.4	Impacts of reservoir management	231
10.5.5	Impacts of supply of hydropower	231
10.6	Water conduits	232
10.6.1	Pipeline design (Stephenson, 1989)	233
10.6.2	Canals	234
10.7	Environmental structures	234
10.8	Hydraulic models	235
10.8.1	Model study of a drop inlet with air entrainment	235
10.8.2	Model objectives	237
10.8.3	Construction and testing of model	238
10.8.4	Air entrainment down drop shaft	238
10.8.5	Comparison of air entrainment rate with theory	241
10.8.6	Model scale effect	241
	References	242
11	<b>ECONOMICS OF WATER RESOURCES DEVELOPMENT</b>	243
11.1	Economic analysis	243
11.1.1	Definitions	243
11.2	Resource evaluation	244
11.3	Present value analysis	245
11.3.1	Discount rate	245
11.3.2	Inflation	245
11.3.3	Taxation	246
11.3.4	Public projects	247
11.4	Planning horizon and project life	247
11.5	Risk and uncertainty	248
11.6	Formula relating annual cash flow to present value	249
11.7	Methods of project comparison	249

---

11.8	Systems analysis	252
11.9	Financing water resources projects	252
11.10	International funding agencies	253
11.10.1	The World Bank	254
11.10.2	Investment experience	255
11.10.3	Social impact	257
11.10.4	Technological impact	257
11.10.5	Environmental concerns	258
11.10.6	Sustainability of project benefits	258
11.11	Socio-economics	259
11.11.1	Health and wellbeing	259
11.11.2	Assessing social impacts	260
	References	264
12	ADMINISTRATION OF WATER PROJECTS	265
12.1	Planning process	265
12.2	Asset management	266
12.2.1	Assets	266
12.3	Public versus private management	269
12.4	Life cycle costing	272
12.4.1	The life of a works	273
12.4.2	Economic evaluation	274
12.4.3	Computation	275
12.5	Vulnerability	278
12.6	Risk	280
12.6.1	Effect of uncertainty in demand estimates	282
	References	286
13	COMPUTER MODELLING AND OPTIMIZATION	287
13.1	Types of models	287
13.2	Conceptual runoff modelling	288
13.2.1	Sub-catchment arrangement	289
13.2.2	Continuous simulation	289
13.2.3	Routing process	291
13.2.4	A continuous runoff model	291
13.2.5	Rainfall-runoff simulation	294
13.2.6	Sediment yield calculation	294
13.2.7	Infiltration into the unsaturated zone	295
13.2.8	Application	296
13.3	Storage analysis	296
13.3.1	Multiple reservoirs	297
13.4	Water distribution systems	298
13.4.1	Transportation programming	299
13.5	Systems analysis techniques	301
13.5.1	Economic policy	301
13.6	Linear programming by the Simplex method	301
13.7	Decomposition of complex systems	303
13.8	A planning model	307
13.9	Solver	309

13.10 Computer packages	310
References	313
