Contents

1	The Geometry of Least Squares	3
1.1	Introduction	3
1.2	The Geometry of Least Squares	4
1.3	Restrictions and Reparametrizations	16
1.4	The Frisch-Waugh-Lovell Theorem	19
1.5	Computing OLS Estimates	25
1.6	Influential Observations and Leverage	32
1.7	Further Reading and Conclusion	39
2	Nonlinear Regression Models and Nonlinear Least Squares	41
2.1	Introduction	41
2.2	The Geometry of Nonlinear Least Squares	43
2.3	Identification in Nonlinear Regression Models	48
2.4	Models and Data-Generating Processes	51
2.5	Linear and Nonlinear Regression Functions	55
2.6	Error Terms	58
2.7	Conclusion	64
3	Inference in Nonlinear Regression Models	66
3.1	Introduction	66
3.2	Covariance Matrix Estimation	67
3.3	Confidence Intervals and Confidence Regions	71
3.4	Hypothesis Testing: Introduction	78
3.5	Hypothesis Testing in Linear Regression Models	81
3.6	Hypothesis Testing in Nonlinear Regression Models	88
3.7	Restrictions and Pretest Estimators	94
3.8	Conclusion	98
4	Introduction to Asymptotic Theory and Methods	99
4.1	Introduction	99
4.2	Sequences, Limits, and Convergence	100
4.3	Rates of Convergence	108
4.4	Data-Generating Processes and Asymptotic Theory	113
4.5	Consistency and Laws of Large Numbers	118
4.6	Asymptotic Normality and Central Limit Theorems	125
4.7	Some Useful Results	130
4.8	Conclusion	137

5 Asymptotic Methods and Nonlinear Least Squares	139
5.1 Introduction	139
5.2 Asymptotic Identifiability	139
5.3 Consistency of the NLS Estimator	145
5.4 Asymptotic Normality of the NLS Estimator	153
5.5 Asymptotic Efficiency of Nonlinear Least Squares	157
5.6 Properties of Nonlinear Least Squares Residuals	162
5.7 Test Statistics Based on NLS Estimates	168
5.8 Further Reading and Conclusion	174
6 The Gauss-Newton Regression	176
6.1 Introduction	176
6.2 Computing Covariance Matrices	179
6.3 Collinearity in Nonlinear Regression Models	181
6.4 Testing Restrictions	186
6.5 Diagnostic Tests for Linear Regression Models	193
6.6 One-Step Efficient Estimation	196
6.7 Hypothesis Tests Using Any Consistent Estimates	199
6.8 Nonlinear Estimation Using the GNR	201
6.9 Further Reading	207
7 Instrumental Variables	209
7.1 Introduction	209
7.2 Errors in Variables	210
7.3 Simultaneous Equations	211
7.4 Instrumental Variables: The Linear Case	215
7.5 Two-Stage Least Squares	220
7.6 Instrumental Variables: The Nonlinear Case	224
7.7 Hypothesis Tests Based on the GNR	226
7.8 Identification and Overidentifying Restrictions	232
7.9 Durbin-Wu-Hausman Tests	237
7.10 Conclusion	242
8 The Method of Maximum Likelihood	243
8.1 Introduction	243
8.2 Fundamental Concepts and Notation	247
8.3 Transformations and Reparametrizations	253
8.4 Consistency	255
8.5 The Asymptotic Distribution of the ML Estimator	260
8.6 The Information Matrix Equality	263
8.7 Concentrating the Loglikelihood Function	267
8.8 Asymptotic Efficiency of the ML Estimator	270
8.9 The Three Classical Test Statistics	274
8.10 Nonlinear Regression Models	279
8.11 Conclusion	287

9	Maximum Likelihood and Generalized Least Squares	288
9.1	Introduction	288
9.2	Generalized Least Squares	289
9.3	The Geometry of GLS	292
9.4	The Gauss-Newton Regression	295
9.5	Feasible Generalized Least Squares	298
9.6	Maximum Likelihood and GNLS	301
9.7	Introduction to Multivariate Regression Models	305
9.8	GLS Estimation of Multivariate Regression Models	309
9.9	ML Estimation of Multivariate Regression Models	315
9.10	Modeling Time-Series/Cross-Section Data	320
9.11	Conclusion	325
10	Serial Correlation	327
10.1	Introduction	327
10.2	Serial Correlation and Least Squares Estimation	329
10.3	Estimating Regression Models with AR(1) Errors	331
10.4	Standard Errors and Covariance Matrices	338
10.5	Higher-Order AR Processes	341
10.6	Initial Observations in Models with AR Errors	343
10.7	Moving Average and ARMA Processes	351
10.8	Testing for Serial Correlation	357
10.9	Common Factor Restrictions	364
10.10	Instrumental Variables and Serial Correlation	369
10.11	Serial Correlation and Multivariate Models	371
10.12	Conclusion	373
11	Tests Based on the Gauss-Newton Regression	374
11.1	Introduction	374
11.2	Tests for Equality of Two Parameter Vectors	375
11.3	Testing Nonnested Regression Models	381
11.4	Tests Based on Comparing Two Sets of Estimates	389
11.5	Testing for Heteroskedasticity	396
11.6	A Heteroskedasticity-Robust Version of the GNR	399
11.7	Conclusion	402
12	Interpreting Tests in Regression Directions	403
12.1	Introduction	403
12.2	Size and Power	405
12.3	Drifting DGPs	409
12.4	The Asymptotic Distribution of Test Statistics	411
12.5	The Geometry of Test Power	415
12.6	Asymptotic Relative Efficiency	421
12.7	Interpreting Test Statistics that Reject the Null	423

12.8	Test Statistics that Do Not Reject the Null	428
12.9	Conclusion	433
13	The Classical Hypothesis Tests	435
13.1	Introduction	435
13.2	The Geometry of the Classical Test Statistics	436
13.3	Asymptotic Equivalence of the Classical Tests	445
13.4	Classical Tests and Linear Regression Models	452
13.5	Alternative Covariance Matrix Estimators	458
13.6	Classical Test Statistics and Reparametrization	463
13.7	The Outer-Product-of-the-Gradient Regression	471
13.8	Further Reading and Conclusion	478
14	Transforming the Dependent Variable	480
14.1	Introduction	480
14.2	The Box-Cox Transformation	483
14.3	The Role of Jacobian Terms in ML Estimation	489
14.4	Double-Length Artificial Regressions	492
14.5	The DLR and Models Involving Transformations	498
14.6	Testing Linear and Loglinear Regression Models	502
14.7	Other Transformations	507
14.8	Conclusion	510
15	Qualitative and Limited Dependent Variables	511
15.1	Introduction	511
15.2	Binary Response Models	512
15.3	Estimation of Binary Response Models	517
15.4	An Artificial Regression	523
15.5	Models for More than Two Discrete Responses	529
15.6	Models for Truncated Data	534
15.7	Models for Censored Data	537
15.8	Sample Selectivity	542
15.9	Conclusion	545
16	Heteroskedasticity and Related Topics	547
16.1	Introduction	547
16.2	Least Squares and Heteroskedasticity	548
16.3	Covariance Matrix Estimation	552
16.4	Autoregressive Conditional Heteroskedasticity	556
16.5	Testing for Heteroskedasticity	560
16.6	Skedastic Directions and Regression Directions	564
16.7	Tests for Skewness and Excess Kurtosis	567
16.8	Conditional Moment Tests	571
16.9	Information Matrix Tests	578
16.10	Conclusion	582

17 The Generalized Method of Moments	583
17.1 Introduction and Definitions	583
17.2 Criterion Functions and M-Estimators	587
17.3 Efficient GMM Estimators	597
17.4 Estimation with Conditional Moments	602
17.5 Covariance Matrix Estimation	607
17.6 Inference with GMM Models	614
17.7 Conclusion	620
18 Simultaneous Equations Models	622
18.1 Introduction	622
18.2 Exogeneity and Causality	624
18.3 Identification in Simultaneous Equations Models	631
18.4 Full-Information Maximum Likelihood	637
18.5 Limited-Information Maximum Likelihood	644
18.6 Three-Stage Least Squares	651
18.7 Nonlinear Simultaneous Equations Models	661
18.8 Conclusion	667
19 Regression Models for Time-Series Data	669
19.1 Introduction	669
19.2 Spurious Regressions	669
19.3 Distributed Lags	673
19.4 Dynamic Regression Models	680
19.5 Vector Autoregressions	684
19.6 Seasonal Adjustment	687
19.7 Modeling Seasonality	696
19.8 Conclusion	699
20 Unit Roots and Cointegration	700
20.1 Introduction	700
20.2 Testing for Unit Roots	702
20.3 Asymptotic Theory for Unit Root Tests	705
20.4 Serial Correlation and Other Problems	710
20.5 Cointegration	715
20.6 Testing for Cointegration	720
20.7 Model-Building with Cointegrated Variables	723
20.8 Vector Autoregressions and Cointegration	726
20.9 Conclusion	730
21 Monte Carlo Experiments	731
21.1 Introduction	731
21.2 Generating Pseudo-Random Numbers	734
21.3 Generating Pseudo-Random Variates	735

21.4	Designing Monte Carlo Experiments	738
21.5	Variance Reduction: Antithetic Variates	744
21.6	Variance Reduction: Control Variates	747
21.7	Response Surfaces	755
21.8	The Bootstrap and Related Methods	763
21.9	Conclusion	768

Appendices
