B I B L I O T H E K

Inventar-Nr.: 1427

Sachgebiete: _____

Standort: _____

PRENTICE-HALL, INC., Englewood Cliffs, New Jersey

CONTENTS

1 AN OVERVIEW OF OPERATING SYSTEMS 1

1.1. The Purpose of an Operating System 1

- 1.1.1. Resource Sharing 1
- 1.1.2. Virtual Machines 2
- 1.1.3. Operating Systems and User Programs 3

1.2. Technological Background 5

- 1.2.1. Computer and Job Profiles 5
- 1.2.2. Batch Processing Systems 6
- 1.2.3. Spooling Systems 10
- 1.2.4. Interactive Systems 14

1.3. The Similarity of Operating Systems 17

1.4. Design Objectives 18

- 1.4.1. Special Purpose Systems 18
- 1.4.2. General Purpose Systems 19

1.5. Literature 21

2 SEQUENTIAL PROCESSES 23

2.1. Introduction 23

2.2. Abstraction and Structure 24

2.3. Computations 26

- 2.3.1. Data and Operations 26
- 2.3.2. Processes 28
- 2.3.3. Computers and Programs 31

- 2.4. Data Structures 33**
 - 2.4.1. Primitive Data Types 33
 - 2.4.2. Structured Data Types 35
 - 2.5. Program Structures 36**
 - 2.5.1. Primitive Statements 36
 - 2.5.2. Structured Statements 38
 - 2.6. Program Construction 42**
 - 2.6.1. The Banker's Algorithm 42
 - 2.6.2. A Hierarchical Solution 45
 - 2.6.3. Conclusion 48
 - 2.7. Literature 52**
-
- 3 CONCURRENT PROCESSES 55**
 - 3.1. Concurrency 55**
 - 3.1.1. Definition 55
 - 3.1.2. Concurrent Statements 57
 - 3.1.3. An Example: Copying 58
 - 3.2. Functional Systems 60**
 - 3.2.1. Program Verification 60
 - 3.2.2. Time-dependent Errors 61
 - 3.2.3. Disjoint Processes 64
 - 3.2.4. The History Concept 68
 - 3.2.5. A Closure Property 71
 - 3.2.6. Non-functional Systems 75
 - 3.3. Mutual Exclusion 77**
 - 3.3.1. Resource Sharing 77
 - 3.3.2. Data Sharing 81
 - 3.3.3. Critical Regions 83
 - 3.3.4. Conclusion 87
 - 3.4. Process Cooperation 89**
 - 3.4.1. Process Communication 89
 - 3.4.2. Semaphores 93
 - 3.4.3. Conditional Critical Regions 98
 - 3.4.4. An Example: Message Buffers 100
 - 3.4.5. An Example: Readers and Writers 106
 - 3.4.6. A Comparison of Tools 114
 - 3.4.7. Event Queues 116
 - 3.4.8. Conclusion 121

3.5. Deadlocks 122

- 3.5.1. The Deadlock Problem 122
- 3.5.2. Permanent Resources 123
- 3.5.3. Hierarchal Resource Allocation 126
- 3.5.4. Hierarchal Process Communication 127

3.6. Literature 130**4 PROCESSOR MANAGEMENT 133****4.1. Introduction 133****4.2. Short-term Scheduling 134**

- 4.2.1. Process Descriptions 135
- 4.2.2. A Basic Monitor 137
- 4.2.3. Process Implementation 138
- 4.2.4. Semaphore and Event Implementation 142
- 4.2.5. Processor Multiplexing 145
- 4.2.6. Timing Constraints 150
- 4.2.7. Conclusion 151

4.3. Literature 152**5 STORE MANAGEMENT 155****5.1. Store Technology 156**

- 5.1.1. Store Components 156
- 5.1.2. Hierarchal Stores 158

5.2. Store Addressing 159

- 5.2.1. Program Segmentation 159
- 5.2.2. Single-segment Computations 161
- 5.2.3. Multi-segment Computations 164
- 5.2.4. Program Relocation 167
- 5.2.5. Conclusion 169

5.3. Placement Algorithms 169

- 5.3.1. Contiguous segments 170
- 5.3.2. Paged segments 173
- 5.3.3. Conclusion 178

5.4. Store Multiplexing 178

- 5.4.1. Demand Fetching 178
- 5.4.2. Process Behavior 182

- 5.4.3. Load Control *184*
- 5.4.4. Refinements *188*
- 5.4.5. Conclusion *190*

- 5.5. Literature *191*

- 6 SCHEDULING ALGORITHMS *193*

- 6.1. Queuing System Model *194*
 - 6.1.1. The Arrival Pattern *195*
 - 6.1.2. The Service Pattern *197*
 - 6.1.3. Performance Measures *201*
 - 6.1.4. A Conservation Law *202*

- 6.2. Non-preemptive Scheduling *204*
 - 6.2.1. First-come First-served *206*
 - 6.2.2. Shortest Job Next *208*
 - 6.2.3. Highest Response Ratio Next *209*

- 6.3. Preemptive Scheduling *213*
 - 6.3.1. Round Robin Scheduling *214*
 - 6.3.2. Limited Swapping *221*

- 6.4. Literature *224*

- 7 RESOURCE PROTECTION *225*

- 7.1. Introduction *225*
- 7.2. Class Concept *226*
- 7.3. Capabilities *232*
- 7.4. Conclusion *234*
- 7.5. Literature *234*

- 8 A CASE STUDY: RC 4000 *237*

- 8.1. System Objectives *238*

- 8.2. Basic Concepts 239**
 - 8.2.1. Programs and Internal Processes 239
 - 8.2.2. Documents and External Processes 240
 - 8.2.3. Monitor 241

- 8.3. Process Communication 241**
 - 8.3.1. Messages and Answers 241
 - 8.3.2. Advantages of Message Buffering 243
 - 8.3.3. Event Primitives 244

- 8.4. External Processes 247**
 - 8.4.1. Input/output 247
 - 8.4.2. Mutual Exclusion 249
 - 8.4.3. Process Identification 249
 - 8.4.4. Replacement of External Processes 250

- 8.5. Internal Processes 251**
 - 8.5.1. Scheduling Primitives 251
 - 8.5.2. Process Hierarchy 253

- 8.6. Resource Protection 254**
 - 8.6.1. Processor Allocation 255
 - 8.6.2. Store Allocation 256
 - 8.6.3. Message Buffers and Process Descriptions 256
 - 8.6.4. Peripheral Devices 257
 - 8.6.5. Privileged Operations 258

- 8.7. Monitor Features 258**
 - 8.7.1. Real-time Synchronization 259
 - 8.7.2. Conversational Access 259
 - 8.7.3. File System 260

- 8.8. Basic Operating System 263**
 - 8.8.1. Process Control 263
 - 8.8.2. System Initialization 267

- 8.9. Size and Performance 268**

- 8.10. Implementation Details 269**
 - 8.10.1. Process Communication 270
 - 8.10.2. Process Scheduling 273
 - 8.10.3. Preemption and Input/output 280
 - 8.10.4. Interruptable Monitor Procedures 281

8.11. A Critical Review 281

8.11.1. System Advantages 282

8.11.2. System Disadvantages 283

8.12. Literature 285**EXERCISES 287****ANSWERS 309****VOCABULARY 335****INDEX TO VOCABULARY 341****REFERENCES 343****INDEX TO ALGORITHMS 351****INDEX 353**
