PREFACE

THE FOUNDATIONS OF THERMOELASTICITY-EXPERIMENTS AND THEORY (A.PHILLIPS)

1. Introduction 1
2. The initial yield surface 4
3. The subsequent yield surface 6
4. Some theoretical consequences 10
References 13

ON THE PHYSICS AND MATHEMATICS OF SELF-STRESSES (E.KRÖNER)

1. Introduction 22
2. The physical origin of the self-stresses 23
3. Formulation of the mathematical problem of self-stresses 27
4. The method of modified Green's functions 30
5. Concluding remarks 35
References 38

DISTORTION IN MICROPOLAR ELASTICITY (W.NOWACKI)

1. Fundamental relations and equations 39
2. Principle of virtual work 42
3. Theorem of minimum of the complimentary work 43
4. Reciprocity theorem 44
5. Equations in displacements and rotations 47
6. Compatibility equations 51
References 57

THE YIELD CRITERION IN THE GENERAL CASE OF NONHOMOGENEOUS STRESS AND DEFORMATION FIELDS (J.A.KÖNIG and W.OLSZAK)

1. Introduction 58
2. The plasticity condition 61
3. Special cases of the yield condition 62
4. Example: Pure bending 63
5. Criteria for neutral, passive and active processes 65

6. The flow law 67
References 69

ELECTRO-MAGNETO-ELASTICITY (J.B.ALBLAS)
1. Introduction 71
2. Balance equations 77
3. The jump and boundary conditions 85
4. The constitutive equations 91
5. Linearization of the magnetic problem 95
6. Magneto-elastic waves in the infinite space and in the half-space 105
References 114

PLASTICITY AND CREEP THEORY IN ENGINEERING MECHANICS (J.F.BESSELING)
1. Introduction 115
2. Limit analysis 117
3. Models of material behaviour 126
4. The geometrically and physically non-linear structural equations 132
5. Some remarks on the applications in engineering 134
References 136

CREEP IN CONTINUA AND STRUCTURES (J.HULT)
1. Introduction 137
2. Basic laws of deformation and damage 139
3. Stable creep deformation, methods of analysis 141
3.1 Elastic analogue 142
3.2 Reference stress methods 143
3.3 Energy theorems 144
4. Ductile instability 144
5. Brittle instability 149
6. Mixed type instability 150
References 150

WEAKENING OF ELASTIC SOLIDS BY DOUBLY-PERIODIC ARRAYS OF CRACKS (W.R.DELAMETER and G.HERRMANN)
1. Introduction 156
2. Formulation of the problems and the method of solution 157

3. Stress intensity factors 159
4. Change in strain energy and effective elastic contstants 162
5. Summary of results 167
References 168

DYNAMIC THERMAL SHOCK RESISTANCE (H.BARGMANN)

1. Introduction 174
2. The basic problem of radiation heating 175
3. Thermal shock resistance of structures 178
4. Representative materials 179
References 180

PLASTOKINETICS OF METAL FORMING (H.LIPPMANN)

1. Introduction 182
2. Some rigorous solutions to kinetically stationary problems 184
2.1 General 184
2.2 Plane-strain compression of a layer 184
2.3 Axially symmetric bulging of a membrane 188
3. Perturbation method 191
3.1 General, Indentation of the half-space 191
3.2 Elementary kinetics of non-stationary forging 193
4. Further non-stationary solutions 196
4.1 Hagen-Poiseuille flow 196
4.2 Flexural waves in plate bulging 197
4.3 Uniaxial longitudinal waves in upsetting 201
References 206
