CONTENTS

CHAPTER

- 1. INTRODUCTION
 - 1.1 Description of the Queueing Problem, 1

- 1

- 1.2 Characteristics of Queueing Processes, 2
 - 1.2.1 Arrival Pattern of Customers, 2

1.2.2 Service Patterns of Servers, 3

- 1.2.3 Queue Discipline, 4
- 1.2.4 System Capacity, 5
- 1.2.5 Number of Service Channels, 6
- 1.2.6 Stages of Service, 6
- 1.3 Measures of Effectiveness, 8
- 1.4 Notation, 8
- 1.5 History, 10
- 1.6 Common Areas of Application, 12
- 1.7 Deterministic Queueing Models, 13
- 1.8 Poisson Process and the Exponential Distribution, 23

1.9 Markovian Property of the Exponential Distribution, 29 Problems, 34

2. SINGLE-CHANNEL EXPONENTIAL QUEUEING MODELS

38

1

2.1 Steady-State Solution for the M/M/1 Model, 40

2.1.1 Step 1—Difference Equations for $p_n(t)$, 41

- 2.1.2 Step 2—Differential-Difference Equations, 43
- 2.1.3 Step 3—Solution of the Differential Equations for $p_n(t)$, 44

2.1.4 Step 4—Steady-State Solution for p_n , 44

- 2.2 Measures of Effectiveness, 51
- 2.3 Waiting-Time Distributions, 56
- 2.4 Relations Between Expected Queue Length and Expected Waiting Time—Little's Formula, 59
- 2.5 Finite System Capacity—Queues With Truncation (M/M/1/K), 64

xi

90

148

- 2.6 Transient Behavior, 71
 - 2.6.1 Transient Behavior of M/M/1/1, 71
 - 2.6.2 Transient Behavior of $M/M/1/\infty$, 75

2.7 Busy Period Analysis, 84 Problems, 86

3. SIMPLE MARKOVIAN BIRTH-DEATH QUEUEING MODELS

- 3.1 Birth–Death Processes, 92
- 3.2 Queues With Parallel Channels (M/M/c), 95 3.2.1 Busy Period, 103
- 3.3 Queues With Parallel Channels and Truncation (M/M/c/K), 104
- 3.4 Erlang's Formula (M/M/c/c), 109
- 3.5 Queues With Unlimited Service $(M/M/\infty)$, 112 3.5.1 Steady-State Results, 112 3.5.2 Transient Analysis, 114
- 3.6 Finite Source Queues, 118
- 3.7 State-Dependent Service, 126
- 3.8 Queues With Impatience, 134 3.8.1 M/M/1 Balking, 134 3.8.2 M/M/1 Reneging, 139

Problems, 140

4. ADVANCED MARKOVIAN MODELS

- 4.1 Bulk Input $(M^{[X]}/M/1)$, 148
- 4.2 Bulk Service $(M/M^{[Y]}/1)$, 154
- 4.3 Erlangian Models $(M/E_k/1 \text{ and } E_k/M1)$, 161
 - 4.3.1 Erlang Service Model $(M/E_k/1)$, 163
 - 4.3.2 Érlang Arrival Model $(E_k/M/1)$, 174
- 4.4 Priority Queue Disciplines, 178
 - 4.4.1 Single Exponential Channel With Priorities, 179
 - 4.4.2 Nonpreemptive Markovian Systems With Many Priorities, 188
 - 4.4.3 Preemptive Priorities, 195
- 4.5 Series Queues, 198
 - 4.5.1 Queue Output, 198
 - 4.5.2 Series Queues With Blocking, 204
- 4.6 Cyclic Queues, 214

Problems, 217

CONTENTS

5.	MODELS WITH GENERAL ARRIVAL OR SERVICE PATTERNS			. 223

- 5.1 Single-Server Queues With Poisson Input and General Service (M/G/1), 223
 - 5.1.1 Expected-Value Measures of Effectiveness: The Pollaczek-Khintchine Formula, 225
 - 5.1.2 Departure-Point Steady-State System-Size Probabilities, 228
 - 5.1.3 Proof That $\pi_n = p_n$, 235
 - 5.1.4 Ergodic Theory, 236
 - 5.1.5 Special Cases $(M/E_k/1 \text{ and } M/D/1)$, 240
 - 5.1.6 Waiting Times, 244
 - 5.1.7 Busy Period Analysis, 248
 - 5.1.8 Some Additional Results, 250
 - 5.1.9 The Bulk Input Queue $(M^{[X]}/G/1)$, 255
 - 5.1.10 Departure-Point State Dependence, 259
- 5.2 Multiserver Queues With Poisson Input and General Service, 264
 - 5.2.1 Some Results for $M/G/c/\infty$, 265
 - 5.2.2 Some Results for M/G/c/c, 266
 - 5.2.3 Some Further Results for $M/G/\infty/\infty$, 272
- 5.3 General Independent Input and Exponential Service, 274
 - 5.3.1 Arrival-Point Steady-State System-Size Probabilities for GI/M/1, 274
 - 5.3.2 Arrival-Point Steady-State System-Size Probabilities for GI/M/c, 280

Problems, 289

- 6.1 General Independent Input, General Service (GI/G/1), 294 6.1.1 Busy Period, 306
- 6.2 Multiple-Channel Queues With Poisson Input and Constant Service (M/D/c), 308
- 6.3 Semi-Markov Processes in Queueing, 311
- 6.4 Other Queue Disciplines, 318
- 6.5 Heavy-Traffic and Nonstationary Queues, 322
- 6.6 More on Bounds and Inequalities, 327
- 6.7 Diffusion Approximations, 335

Problems, 340

7.	STAT	TISTICAL INFERENCE AND DESIGN AND CONTROL	344
	7.1	Statistical Inference in Queueing, 344 7.1.1 Parameter Estimation Problems, 345	
	7.2	7.1.2 Distribution Selection Problems, 357 Design and Control of Queues, 364 7.2.1 Rate-Control Models, 366 7.2.2 Economic (Cost or Profit) Models, 371	
	Prot	blems, 378	
8.	SIMU	ULATION	381
	8.1	Elements of a Simulation Model, 382	
	8.2	Monte-Carlo Random-Variate Generation, 385	
		8.2.1 Generation of Uniform-(0,1) Kanaom Numbers, 380	0.11
		8.2.2 Generation of Ranaom Variates Other Than Uniform-(0, 1),
	8.3	Bookkeeping Aspects of Simulation Analysis, 392	
	8.4	Simulation Programming Languages, 400	
		8.4.1 GPSS Simulation Language, 401	
		8.4.2 SIMSCRIPT Simulation Language, 405	
		8.4.3 Other Simulation Languages, 411	
	8.5	Statistical Considerations, 412	
		8.5.1 Validation, 412	
		8.5.2 Steady State, 413	
		8.5.3 Statistical Analyses of Output, 415	
		8.5.4 Optimization, 423	
	8.6	Simulation Model Example, 425	
	Pro	blems, 432	
9.	APP	LYING QUEUEING THEORY — A CASE STUDY	436
	91	The Problem 136	
	92	The Cost Model 437	
	9.3	The Queueing Model—Input. 438	
	9.4	The Queueing Model—Output, 445	
	9.5	Results, 445	
	9.6	Model Refinement, 448	
	9.7	Discussion, 451

ADDITIONAL READINGS

Books, 460

Articles. 460 Applications, 460 Bulk Models. 461 Design and Control, 461 Finite Source Queues, 461 General Results, 461 Impatience, 462 Models—Multiple Channels, 462 Models—Single Channel, 462 Priorities, 463 Series and Cyclic. 463 State Dependence. 463

APPENDICES

 1. DICTIONARY OF SYMBOLS
 464

2. DIFFERENTIAL AND DIFFERENCE EQUATIONS

- A2.1 Ordinary Differential Equations, 472
 - A2.1.1 Classification, 472
 - A2.1.2 Solutions, 473
 - A2.1.3 Separation of Variables, 475
 - A2.1.4 Linear Differential Equations of First Order, 476
 - A2.1.5 Linear Differential Equations With Constant Coefficients, 478
 - A2.1.6 Undetermined Coefficients, 482
 - A2.1.7 Variation of Parameters, 484
 - A2.1.8 Differential Operators 487
 - A2.1.9 Reduction of Order, 489
 - A2.1.10 Systems of Simultaneous Linear Differential Equations With Constant Coefficients, 490
 - A2.1.11 Summary, 493

A2.2 Difference Equations, 494

- A2.2.1 Linear Difference Equations With Constant Coefficients, 495
- A2.2.2 Systems of Simultaneous Linear Difference Equations With Constant Coefficients, 497
