
Floods in a Changing Climate

Inundation Modelling

Giuliano Di Baldassarre

UNESCO-IHE Institute for Water Education

Contents

<i>Contributing authors</i>	page ix	4.5 Exercises	42
<i>Forewords</i>	xi	5 Model building	43
<i>Preface</i>	xiii	5.1 Modelling approaches	43
1 Introduction	1	5.2 Model selection	46
1.1 Floods: natural processes and (un)natural disasters	1	5.3 Model implementation	48
1.2 Definitions	1	5.4 Conclusions and perspectives	50
1.3 Flood inundation modelling	4	5.5 Exercises	51
1.4 Climate and floods	4	6 Model evaluation	52
1.5 Problems addressed by this book	6	6.1 Concepts	52
		6.2 Performance measures	52
		6.3 Calibration and validation	55
		6.4 Uncertainty analysis	57
		6.5 Conclusions and perspectives	59
		6.6 Exercises	59
Part I Theory		7 Model outputs	61
2 Theoretical background: steady flow	11	7.1 Mapping model results	61
<i>with contributing author: Luigia Brandimarte</i>		7.2 Deterministic floodplain mapping	63
2.1 Uniform flow	11	7.3 Probabilistic floodplain mapping	63
2.2 Subcritical and supercritical flows	11	7.4 Deterministic versus probabilistic	65
2.3 Water surface profiles	15	7.5 Conclusions and perspectives	66
2.4 Backwater computation	18	7.6 Exercises	66
2.5 Exercises	19		
3 Theoretical background: unsteady flow	21	Part III Applications	
<i>with contributing author: Ioana Popescu</i>		8 Urban flood modelling	69
3.1 Introduction	21	<i>with contributing authors: Jeffrey C. Neal, Paul D. Bates and Timothy J. Fewtrell</i>	
3.2 Navier–Stokes equations	21	8.1 Introduction	69
3.3 Saint-Venant equations	24	8.2 Requirements for hydraulic modelling of urban floods	69
3.4 Kinematic wave model	26	8.3 Test case	71
3.5 Diffusive model	27	8.4 Discussion and conclusions	76
3.6 Fully dynamic model	28		
3.7 Conclusions	30	9 Changes in flood propagation caused by human activities	78
3.8 Exercises	30	9.1 Introduction	78
		9.2 Test site and problem statement	79
		9.3 Methods	80
Part II Methods			
4 Data sources	33		
4.1 Ground data	33		
4.2 Remote sensing data	34		
4.3 Uncertainty	38		
4.4 Conclusions and perspectives	42		

9.4	Results	82	11	Evaluation of floodplain management strategies	89
9.5	Conclusions	82	11.1	Introduction	89
9.6	Exercises	83	11.2	Test site and problem statement	89
10	Changes of stage–discharge rating curves	85	11.3	Methods	91
10.1	Introduction	85	11.4	Results	91
10.2	Test site and problem statement	85	11.5	Discussion	95
10.3	Methods	86	11.6	Conclusions	96
10.4	Results	87		<i>References</i>	97
10.5	Conclusions	88		<i>Index</i>	103
