Preface xxiv

## PART I ORDINARY LEAST SQUARES 1

---

### Chapter 1 The Least-Squares Linear Fit 3

- 1.1 Earnings and Attributes of Workers 3
- 1.2 Generalizing the Sample Average 7
- 1.3 OLS Regression 14
- 1.4 Overview 15
- 1.5 Exercises 16
- 1.6 Appendix: Data Collection 17

### Chapter 2 The Geometry of Least Squares 19

- 2.1 Introductory Example 19
- 2.2 Ordinary Least Squares 21
- 2.3 Examples of OLS 25
- 2.4 Orthogonal Projection 28
  - 2.4.1 The Projection Theorem 31
  - 2.4.2 Orthogonal Projectors 31
- 2.5 Exact Multicollinearity 34
- 2.6 Mathematical Notes 36
  - 2.6.1 Gram–Schmidt Orthonormalization 36
  - 2.6.2 Properties of Orthogonal Projectors 37
  - 2.6.3 Proofs 38
- 2.7 Overview 40
- 2.8 Exercises 41
  - 2.8.1 Review 41
  - 2.8.2 Extensions 44

**Chapter 3 Partitioned Fit 47**

- 3.1 Introductory Example 47
- 3.2 Partitioned Fit 54
- 3.3 Projection 61
- 3.4 Projectors 66
- 3.5 Overview 68
- 3.6 Exercises 69
  - 3.6.1 Review 69
  - 3.6.2 Extensions 72

**Chapter 4 Restricted Least Squares 74**

- 4.1 Introduction 74
- 4.2 Linear Restrictions 77
- 4.3 Restricted Least Squares 79
- 4.4 Generalized Distance 84
  - 4.4.1 Translation 87
- 4.5 Generalized Projection 88
- 4.6 Overview 91
- 4.7 Exercises 92
  - 4.7.1 Review 92
  - 4.7.2 Extensions 94

**Chapter 5 Overview of Ordinary Least Squares 97**

- 5.1 Geometric Theory 97
- 5.2 Econometric Specifications 99
- 5.3 Econometric Method 100

**PART II LINEAR REGRESSION 101**

---

**Chapter 6 Linear Unbiased Estimation 105**

- 6.1 Experimental Example 105
- 6.2 First Moments 110
- 6.3 Conditional Means 113
- 6.4 Projection of Random Variables 114
- 6.5 Mathematical Notes 118
- 6.6 Methodological Notes 120
- 6.7 Overview 121
- 6.8 Exercises 122
  - 6.8.1 Review 122
  - 6.8.2 Extensions 123

**Chapter 7 Variances and Covariances 125**

- 7.1 Introduction 125
- 7.2 Second Moments 129

7.3	Spherical Distributions	131
7.4	The Variance Ellipse	133
7.5	Minimum MSE Linear Prediction	135
7.6	Mathematical Notes	140
7.6.1	A Square Root of the Variance Matrix	140
7.6.2	The Cauchy–Schwarz Inequality	143
7.6.3	Linear Transformation of Variance Ellipses	144
7.6.4	A Quadratic Decomposition	146
7.7	Overview	148
7.8	Exercises	149
7.8.1	Review	149
7.8.2	Extensions	152

## Chapter 8 Variances and Covariances of Ordinary Least Squares 154

8.1	Experimental Example	154
8.2	Second-Moment Properties	157
8.3	Variance and Covariance Matrices	159
8.4	Estimation of the Variance Parameter	163
8.5	Methodological Note	167
8.6	Overview	168
8.7	Exercises	168
8.7.1	Review	168
8.7.2	Extensions	170

## Chapter 9 Efficient Estimation 173

9.1	Introduction	173
9.2	Design and Precision	175
9.2.1	Dispersion	177
9.2.2	Sample Size	177
9.2.3	Near Multicollinearity	178
9.2.4	Forecast Variance	180
9.3	Restricted Estimation	182
9.4	The Gauss–Markov Theorem	186
9.4.1	Geometry of the Gauss–Markov Theorem	187
9.4.2	Proof of the Gauss–Markov Theorem	188
9.5	Mathematical Notes	189
9.6	Overview	190
9.7	Exercises	191
9.7.1	Review	191
9.7.2	Extensions	193

## Chapter 10 Normal Distribution Theory 195

10.1	Introduction	195
10.2	Distribution Theory for OLS Estimators	198

10.3	Interval Estimators	200
10.3.1	Variance	200
10.3.2	Coefficient Vector with Known Variance	201
10.3.3	Coefficient Vector with Unknown Variance	203
10.3.4	Linear Functions of Coefficients	204
10.4	Efficiency of OLS	205
10.5	Basic Distribution Theory	205
10.5.1	The Multivariate Normal Distribution	206
10.5.2	The Chi-Square and $F$ Distributions	210
10.5.3	Singular Variances and Generalized Inverses	211
10.5.4	Singular Multivariate Normal Distributions	214
10.6	Methodological Notes	215
10.7	Overview	216
10.8	Exercises	217
10.8.1	Review	217
10.8.2	Extensions	219

## **Chapter 11 Hypothesis Testing 222**

11.1	Introduction	222
11.2	Hypothesis Testing	224
11.3	Statistical Power	228
11.3.1	Power Comparisons for Tests	229
11.3.2	$t$ Statistics	229
11.3.3	Optimal Power and the $F$ Test	231
11.4	Basic Distribution Theory	232
11.5	Methodological Notes	236
11.6	Overview	237
11.7	Exercises	238
11.7.1	Review	238
11.7.2	Extensions	239

## **Chapter 12 Overview of Linear Regression 240**

12.1	Statistical Theory	240
12.2	Probability Distribution Theory	241

---

## **PART III GENERALIZATIONS OF THE LINEAR MODEL 243**

---

### **Chapter 13 Nonnormal Distribution Theory 245**

13.1	Introduction	245
13.2	Nonnormal Parametric Distributions	246
13.2.1	The Student $t$ Distribution	247
13.2.2	Laplace (Double Exponential) Distribution	249
13.2.3	Logistic Distribution	250
13.2.4	Power Exponential Distribution	250

13.3	LAD Estimation	251
13.3.1	The Sample Median	252
13.3.2	LAD Linear Regression	253
13.4	Asymptotic Distribution Theory	256
13.4.1	Convergence in Distribution	259
13.4.2	Law of Large Numbers	262
13.4.3	Central Limit Theorem	265
13.4.4	Sample Size	267
13.5	Mathematical Notes	270
13.5.1	The Density of an Order Statistic	270
13.5.2	Properties of LAD Fit	271
13.5.3	Convergence Proofs	273
13.6	Overview	278
13.7	Exercises	279
13.7.1	Review	279
13.7.2	Extensions	281

## Chapter 14 Maximum Likelihood Estimation 284

14.1	Introduction	284
14.2	Probability Model Specification	285
14.3	The Likelihood Function	288
14.4	The Maximum Likelihood Estimator	293
14.5	Identification	295
14.6	The Score Function	300
14.7	The Information Matrix	302
14.8	The Cramér–Rao Lower Bound	305
14.9	Mathematical Notes	311
14.10	Overview	312
14.11	Exercises	314
14.11.1	Review	314
14.11.2	Extensions	315

## Chapter 15 Maximum Likelihood Asymptotic Distribution Theory 318

15.1	Introduction	318
15.2	Consistency	320
15.3	Asymptotic Normality	324
15.3.1	Score	325
15.3.2	Information	326
15.3.3	Asymptotic Distribution	327
15.4	Variance Estimation	329
15.5	Efficiency	331
15.6	Linearized MLE	333
15.7	Restricted Estimation	334

15.8	Mathematical Notes	336
15.9	Overview	340
15.10	Exercises	342
	15.10.1 Review	342
	15.10.2 Extensions	343

## Chapter 16 Maximum Likelihood Computation 347

16.1	Introduction	347
16.2	Grid Search	349
16.3	Polynomial Approximation	349
16.4	Line Searches	351
	16.4.1 The Method of Steepest Ascent	353
	16.4.2 Quadratic Methods	355
	16.4.3 Quadratic Methods and the MLE	357
	16.4.4 LMLE	361
16.5	Convergence Criteria	362
16.6	Transformations of Parameters	364
16.7	Concentrating the Likelihood Function	368
16.8	The Gauss–Seidel Algorithm	371
16.9	Mathematical Notes	372
	16.9.1 Proofs	372
	16.9.2 Stochastic Order	374
	16.9.3 Uniqueness of the MLE	375
16.10	Overview	376
16.11	Exercises	377
	16.11.1 Review	377
	16.11.2 Extensions	379

## Chapter 17 Maximum Likelihood Statistical Inference 380

17.1	Introduction	380
17.2	The Classical Hypothesis Test Statistics	384
	17.2.1 The Wald Test	384
	17.2.2 The Score Test	385
	17.2.3 The Likelihood Ratio Test	388
	17.2.4 A Graphic Description of the Test Statistics	389
17.3	Asymptotic Distribution Theory	393
	17.3.1 The Likelihood Ratio Test	394
	17.3.2 The Score Test	395
	17.3.3 The Wald Test	395
	17.3.4 The $C(\alpha)$ Test	396
	17.3.5 Limiting Distribution	396
17.4	Parameter Transformations and Invariance	397
17.5	Power	402
	17.5.1 Local Power	403

17.5.2 Neyman–Pearson Lemma	406
17.6 Interval Estimation	408
17.7 Overview	409
17.8 Exercises	410
17.8.1 Review	410
17.8.2 Extensions	412
<b>Chapter 18 Heteroskedasticity</b>	<b>416</b>
18.1 Heteroskedasticity in Wages	417
18.2 Heteroskedasticity and OLS	421
18.3 Testing for Heteroskedasticity	423
18.3.1 The Goldfeld–Quandt <i>F</i> Test	424
18.3.2 The Breusch–Pagan Score Test	424
18.4 Adjustments to OLS	427
18.5 Heteroskedasticity and WLS/GLS	429
18.5.1 Maximum Likelihood	433
18.5.2 FGLS	435
18.5.3 Adaptive Estimation	440
18.6 Methodological Notes	442
18.7 Mathematical Notes	443
18.7.1 Score and Information	444
18.7.2 The Maximum Likelihood Estimator	444
18.7.3 The Breusch–Pagan Score Test	446
18.7.4 Regularity	447
18.7.5 Asymptotic Theory for Heteroskedasticity	448
18.8 Overview	451
18.9 Exercises	452
18.9.1 Review	452
18.9.2 Extensions	453
<b>Chapter 19 Serial Correlation</b>	<b>455</b>
19.1 The Phillips Curve	455
19.2 The Basic Autoregressive Model	458
19.2.1 The Autocorrelation Function	458
19.2.2 The Log-Likelihood Function	460
19.3 Autocorrelation and OLS	462
19.4 Testing for Autocorrelation	464
19.4.1 Breusch–Godfrey Score Test	464
19.4.2 The Durbin–Watson Test	466
19.5 Variance Estimation for OLS	466
19.6 Serial Correlation and GLS	468
19.6.1 Maximum Likelihood Estimation	469
19.6.2 FGLS	471
19.7 Prediction	471

19.8	Methodological Notes	472
19.9	Mathematical Notes	475
19.9.1	Score and Information	475
19.9.2	Breusch–Godfrey Score Test	476
19.9.3	Asymptotic Distribution Theory	477
19.9.4	OLS versus GLS	480
19.10	Overview	481
19.11	Exercises	482
19.11.1	Review	482
19.11.2	Extensions	483

## Chapter 20 Instrumental Variables Estimation 486

20.1	The Phillips Curve Revisited	487
20.2	Latent Variable Models	491
20.3	Omitted Explanatory Variables	493
20.4	Consistent Estimation	499
20.5	Two-Stage Least Squares	502
20.6	Two-Step Variance Estimation	505
20.7	Efficiency	509
20.7.1	Simultaneous Equations	509
20.7.2	Dynamic Regression	511
20.7.3	IV and GLS	512
20.8	Issues in Small Samples	514
20.9	Methodological Notes	515
20.10	Mathematical Notes	516
20.10.1	Covariance Stationarity	517
20.10.2	Dynamic Regression Log-Likelihood	518
20.10.3	Hatanaka's Estimator	518
20.10.4	Two-Step Estimation	519
20.10.5	Optimal Instruments	520
20.11	Overview	521
20.12	Exercises	522
20.12.1	Review	522
20.12.2	Extensions	526

## Chapter 21 The Generalized Method of Moments 531

21.1	A Random Walk	532
21.2	Definition of GMM	536
21.2.1	Turning Moments into Estimators	537
21.2.2	Nonlinear Least Squares	539
21.2.3	Two-Stage Least Squares	541
21.3	Identification	542
21.4	Distribution Theory	545
21.4.1	Proof of Consistency	546

21.4.2 Proof of Asymptotic Normality	547
21.4.3 Variance Matrix Estimation	548
21.4.4 Efficiency	550
21.5 Methodological Notes	555
21.6 Mathematical Notes	555
21.6.1 Uniform Convergence of the GMM Criterion Function	555
21.6.2 Nonsingularity of the GMM Hessian	556
21.6.3 GMM Efficiency	557
21.7 Overview	557
21.8 Exercises	558
21.8.1 Review	558
21.8.2 Extensions	561
21.9 Appendix: Data Collection	562
<b>Chapter 22 Generalized Method of Moments Hypothesis Tests</b>	<b>564</b>
22.1 Tests of Parameter Restrictions	565
22.1.1 Wald Test	566
22.1.2 Gradient Test	567
22.1.3 Distance Difference Test	567
22.1.4 Minimum Chi-Square Test	568
22.1.5 Special Identities	569
22.1.6 Generalizing Likelihood-Based Diagnostics	570
22.2 Tests of Moment Restrictions	572
22.2.1 Overidentifying Restrictions Tests	576
22.3 Hausman Specification Tests	578
22.4 Equivalence among Test Statistics	585
22.4.1 A Trinity of GMM Test Statistics	586
22.4.2 Minimum Chi-Square	587
22.5 Statistical Power	590
22.6 Sequential Testing	592
22.7 Minimum Distance Estimation	594
22.8 Mathematical Notes	597
22.9 Methodological Notes	601
22.10 Overview	601
22.11 Exercises	602
22.11.1 Review	602
22.11.2 Extensions	605
<b>Chapter 23 Overview</b>	<b>608</b>

---

## PART IV LATENT VARIABLE MODELS 613

---

<b>Chapter 24 Panel Data Models</b>	<b>615</b>
24.1 Introduction	615

24.2	Fixed Individual Effects	616
24.3	Random Individual Effects	618
24.4	Fixed versus Random Effects	622
24.5	Generalizations	623
	24.5.1 Individual-Specific Explanatory Variables	624
	24.5.2 Time-Specific Effects	625
	24.5.3 Dynamic Models	626
24.6	Specification Tests	628
24.7	Linear Projection	630
	24.7.1 Identification and OLS	631
	24.7.2 Efficient Estimation	632
	24.7.3 Diagnostic Tests	634
24.8	Additional Moment Restrictions	635
	24.8.1 Identification	635
	24.8.2 Estimation	636
24.9	Mathematical Notes	638
24.10	Overview	640
24.11	Exercises	641
	24.11.1 Review	641
	24.11.2 Extensions	643

## Chapter 25 Autoregressive Moving-Average Time Series Models 645

25.1	Introduction	645
25.2	Autoregressive Processes	649
	25.2.1 Stationarity	651
	25.2.2 Restricted Estimation	656
	25.2.3 Sequential Testing for Order	657
25.3	Moving-Average Processes	658
	25.3.1 Identification	660
	25.3.2 Kalman Filter	663
	25.3.3 Estimation	667
	25.3.4 Testing Serial Correlation	670
25.4	ARMA Processes	673
	25.4.1 Identification and Invertibility	675
	25.4.2 Kalman Filter and Estimation	679
	25.4.3 Hypothesis Tests	679
25.5	Wold Decomposition	680
	25.5.1 Linearly Deterministic Processes	681
	25.5.2 Wold Decomposition Theorem	682
25.6	Methodological Notes	684
25.7	Mathematical Notes	685
	25.7.1 Yule–Walker Equations	685
	25.7.2 Kalman Filter	686
	25.7.3 MA( $q$ ) Identification	689

25.7.4	Score Test Equivalence	690
25.8	Overview	691
25.9	Exercises	693
	25.9.1 Review	693
	25.9.2 Extensions	696
<b>Chapter 26 Simultaneous Equations 697</b>		
26.1	Introduction	697
26.2	Seemingly Unrelated Regressions	698
	26.2.1 Estimation of a Cost Function	699
	26.2.2 Assumptions	700
	26.2.3 OLS versus GLS	701
	26.2.4 Feasible GLS Estimation	704
	26.2.5 Maximum Likelihood Estimation	705
26.3	Simultaneous Equations	706
	26.3.1 Definitions	709
	26.3.2 Assumptions	710
26.4	Identification	711
	26.4.1 Equation Identification	714
	26.4.2 System Identification	717
26.5	Estimation	718
	26.5.1 Limited Information	719
	26.5.2 Full Information	721
	26.5.3 Maximum Likelihood	723
26.6	Hypothesis Tests	727
26.7	Mathematical Notes	730
	26.7.1 Score Functions	730
	26.7.2 Information Matrix	732
26.8	Overview	734
26.9	Exercises	736
	26.9.1 Review	736
	26.9.2 Extensions	742
<b>Chapter 27 Discrete Dependent Variables 747</b>		
27.1	Bernoulli Dependent Variables	748
	27.1.1 Bernoulli Regression	748
	27.1.2 Estimation	750
	27.1.3 A Latent Variable Interpretation	755
27.2	Additional Univariate Models	757
	27.2.1 Ordered Data	758
	27.2.2 Count Data	761
27.3	Multivariate Models	764
	27.3.1 Multiple Choice	764
	27.3.2 Rank-Ordered Multiple Choice	770

27.4	Latent Variables and Computation	771
27.4.1	Score Functions	772
27.4.2	Hessian and Information Functions	773
27.4.3	EM Algorithm	774
27.4.4	Simulation	775
27.5	Methodological Notes	777
27.6	Mathematical Notes	778
27.6.1	Katz Family of Distributions	779
27.6.2	Logit Probabilities	780
27.6.3	EM Algorithm	782
27.6.4	Simulation	784
27.7	Overview	784
27.8	Exercises	786
27.8.1	Review	786
27.8.2	Extensions	788
<b>Chapter 28 Censored and Truncated Variables</b>		791
28.1	Labor Supply	791
28.2	Mixed Probability Functions	794
28.3	Censored Moments	798
28.4	Estimation	800
28.5	Prediction and Truncated Means	802
28.6	Truncated Regression	803
28.7	Nonrandom Sample Selection	806
28.7.1	Log-Likelihood	807
28.7.2	Moments	808
28.7.3	Estimation	809
28.8	Specification of Distribution	810
28.8.1	Censored Regression	810
28.8.2	Truncated Regression	814
28.9	Mathematical Notes	817
28.9.1	Integrals	817
28.9.2	Censored Moments	819
28.9.3	Nonrandom Sample Selection	822
28.10	Overview	824
28.11	Exercises	824
28.11.1	Review	824
28.11.2	Extensions	827
<b>Chapter 29 Overview</b>		831
<b>PART V APPENDICES</b>		833
<b>Appendix A Abbreviations and Acronyms</b>		835
<b>Appendix B Notation</b>		837

B.1	Limits	837
B.2	Sets	838
B.3	Functions	838
B.4	Linear Vector Spaces	838
B.5	Matrices	839
B.6	Random Variables	840
B.7	Optima and Roots	840

**Appendix C Linear Algebra and Matrix Theory 841**

C.1	Linear Vector Spaces	841
C.2	Linear Transformations	847
C.3	Inner Products and Orthogonality	851
C.4	Normed Linear Vector Spaces	855
C.5	Determinants	856
	C.5.1 Volume of a Parallelogram	857
	C.5.2 Determinant of a Matrix	860
	C.5.3 The Cofactor Expansion	862
C.6	Eigenvalues and Eigenvectors	865

**Appendix D Probability 867**

D.1	Fundamental Concepts	867
D.2	Random Variables	868
	D.2.1 Mathematical Notes	875
D.3	Joint and Conditional Probability	879
	D.3.1 Mathematical Notes	883
D.4	Special Distributions	884
D.5	Limiting Approximations	891
	D.5.1 A Sequence of Densities	893
	D.5.2 Sequences of Moments	895
	D.5.3 Sequences of c.f.s	896
	D.5.4 Mathematical Notes	898

**Appendix E Classical Statistics 902**

E.1	Sampling	902
E.2	Classical Statistical Inference	904
	E.2.1 Estimation	904
	E.2.2 Hypothesis Tests	906
	E.2.3 Estimation Methods	907
	E.2.4 Asymptotic Distribution Theory	913

**Appendix F Noncentral Distributions 916****Appendix G Multivariate Differentiation 922**

G.1	Basic Notation	922
G.2	Vectorization and Kronecker Products	924

G.2.1	Kronecker Products	925
G.3	Derivative Vectors	926
G.4	Derivative Matrices	927
G.5	The Normal Log-Likelihood Function	928

**Appendix H Characteristic Functions 931**

**Bibliography 935**

**Index 945**
