

THIRD EDITION

# Numerical Methods for Partial Differential Equations

WILLIAM F. AMES

*School of Mathematics  
Georgia Institute of Technology  
Atlanta, Georgia*

**ACADEMIC PRESS, INC.**

Harcourt Brace Jovanovich, Publishers

**Boston San Diego New York**

**London Sydney Tokyo Toronto**

# Contents

Preface to the Third Edition	xi
Preface to the Second Edition	xiii
Preface to the First Edition	xv

## 1 Fundamentals

1-0 Introduction	1
1-1 Computer Program Packages	3
1-2 Typical Problems	6
1-3 Classification of Equations	8
1-4 Discrete Methods	14
1-5 Finite Differences and Computational Molecules	15
1-6 Finite Difference Operators	20
1-7 Method of Weighted Residuals	24
1-8 Finite Elements	27
1-9 Method of Lines	33
1-10 Errors	35
1-11 Stability and Convergence	36
1-12 Irregular Boundaries	38
1-13 Choice of Discrete Network	41
1-14 Dimensionless Forms	42
References	47

## 2 Parabolic Equations

2-0 Introduction	50
2-1 Properties of a Simple Explicit Method	52
2-2 Fourier Stability Method	56
2-3 Implicit Methods	58
2-4 Additional Stability Considerations	64
2-5 Matrix Stability Analysis	66
2-6 Extension of Matrix Stability Analysis	69
2-7 Consistency, Stability, and Convergence	71
2-8 Pure Initial Value Problems	72
2-9 Variable Coefficients	74
2-10 Examples of Equations with Variable Coefficients	78
2-11 General Concepts of Error Reduction	81
2-12 Methods of Lines (MOL) for Parabolic Equations	85
2-13 Weighted Residuals and the Method of Lines	86
2-14 Bubnov–Galerkin Scheme for Parabolic Equations	89
2-15 Finite Elements and Parabolic Equations—Hermite Basis	93
2-16 Finite Elements and Parabolic Equations—General Basis Functions	97
2-17 Finite Elements and Parabolic Equations—Special Basis Functions	98
2-18 Explicit Finite Difference Methods for Nonlinear Problems	102

2-19	An Application of the Explicit Method	106
2-20	Implicit Methods for Nonlinear Problems	111
2-21	Further Applications in One Dimension	119
2-22	Asymmetric Approximations	123
	References	130
<b>3</b>	<b>Elliptic Equations</b>	
3-0	Introduction	133
3-1	Simple Finite Difference Schemes	135
3-2	Direct Methods	139
3-3	Iterative Methods	144
3-4	Linear Elliptic Equations	146
3-5	Some Point Iterative Methods	149
3-6	Convergence of Point Iterative Methods	154
3-7	Rates of Convergence	161
3-8	Accelerations	166
3-9	Conjugate Gradient Method	173
3-10	Extensions of SOR	176
3-11	Qualitative Examples of Over-Relaxation	181
3-12	Other Point Iterative Methods	186
3-13	Block Iterative Methods	198
3-14	Alternating Direction Methods	202
3-15	Summary of ADI Results	205
3-16	Triangular Elements	212
3-17	Boundary Element Method (BEM)	218
3-18	Spectral Methods	225
3-19	Some Nonlinear Examples	227
	References	231
<b>4</b>	<b>Hyperbolic Equations</b>	
4-0	Introduction	236
4-1	The Quasilinear System	241
4-2	Introductory Examples	247
4-3	Method of Characteristics	252
4-4	Constant States and Simple Waves	256
4-5	Typical Application of Characteristics	258
4-6	Finite Differences for First-Order Equations	265
4-7	Lax-Wendroff Methods and Other Algorithms	268
4-8	Dissipation and Dispersion	271
4-9	Explicit Finite Difference Methods	277
4-10	Attenuation	281
4-11	Implicit Methods for Second-Order Equations	284
4-12	Time Quasilinear Examples	286
4-13	Simultaneous First-Order Equations—Explicit Methods	289
4-14	An Implicit Method for First-Order Equations	294
4-15	Hybrid Methods for First-Order Equations	294
4-16	Finite Elements for First-Order Equations	297
4-17	Asymmetric Weighting Functions	300
4-18	Finite Elements and the Wave Equation	302

4-19 Spectral Methods and Periodic Systems	306
4-20 Gas Dynamics in One Space Variable	307
4-21 Eulerian Difference Equations	309
4-22 Lagrangian Difference Equations	315
4-23 Hopscotch Methods for Conservation Laws	317
4-24 Explicit–Implicit Schemes for Conservation Laws	321
References	323
<b>5 Special Topics</b>	
5-0 Introduction	326
5-1 Singularities	326
5-2 Shocks	334
5-3 Eigenvalue Problems	341
5-4 Parabolic Equations in Several Space Variables	349
5-5 Additional Comments on Elliptic Equations	354
5-6 Hyperbolic Equations in Higher Dimensions	361
5-7 Mixed Systems	370
5-8 Higher Order Equations in Elasticity and Vibrations	374
5-9 Computational Fluid Mechanics	382
5-10 Stream Function—Vorticity Method for Fluid Mechanics	385
5-11 Primitive Variable Methods for Fluid Mechanics	394
5-12 Vector Potential Methods for Fluid Mechanics	400
5-13 Introduction to Monte Carlo Methods	405
5-14 Fast Fourier Transform and Applications	408
5-15 Method of Fractional Steps	411
5-16 Applications of Group Theory in Computation	415
5-17 Computational Ocean Acoustics	420
5-18 Enclosure Methods	422
References	423
Author Index	435
Subject Index	443
