List of Figures	xiv
Typography	xix
Abbreviations	xx
Terminology	xxiii
1 Introduction	1
1.1 What is a TCAD System?	2
1.2 What is a Data Level?	2
1.3 Outline	4
2 TCAD System Data Analysis	7
2.1 General Principles	7
2.1.1 Tool Integration	7
2.1.2 Data Flows	11
2.2 TCAD Users and Tasks	14
2.3 Tool Data	16
2.4 Task and Framework Data	18

2.4.1	Tool Coupling	18
2.4.2	Framework Internal Data	19
2.5	Representational Aspects	19
2.6	Summary	21
3	Concepts of Data Levels	23
3.1	Interchange Formats	25
3.1.1	Textual Representation	27
3.1.2	Binary Representation	28
3.2	Application Procedural Interface	29
3.2.1	Client-Server Approaches	30
3.3	Object-Orientedness	31
3.4	The VISTA Approach	32
4	VISTA Data Level Architecture	35
4.1	Design Guidelines	35
4.2	PIF — The Intersite Format	36
4.3	PBF — The Intertool Format	38
4.4	Comparison to Other Approaches	39
5	Software Engineering Aspects	41
5.1	Software Project Management	41
5.2	VMAKE	42
5.3	CVS	43
5.4	TAC	44
5.5	UNFUG	44

5.6	VOOPS	46
5.6.1	Why Object-Oriented Programming?	47
5.6.2	Drawbacks	48
5.6.3	Comparison to Object-Oriented Languages	49
5.6.4	Architecture of VOOPS	50
5.6.5	The VOOPS Class Model	51
6	VISTA Data Level Implementation	53
6.1	PAI — The Layered Procedural Interface	53
6.1.1	Error Handling	55
6.1.2	VISTA Operating System	55
6.1.3	File Layer	55
6.1.4	Network Layer	56
6.1.5	Caching Layer	58
6.1.6	Basic Layer	58
6.1.7	Interface Layer	62
6.1.8	Application Layer and Language Bindings	63
6.1.9	Procedural Interfaces	64
6.1.10	PIF Binary File Manager	66
6.2	Semantic Issues	67
6.3	Grid Representations	68
6.3.1	Tensor Product Grids	68
6.3.2	Unstructured Grids	69
6.4	Performance Evaluation	71

7	High-Level Libraries	73
7.1	GRS	74
7.1.1	Architecture	74
7.1.2	Unstructured Grid Reading and Writing	89
7.1.3	Generic Interpolation	89
7.1.4	The KIRKPATRICK Point Location Method	90
7.1.5	A Practical GRS Example — The MINIMOS Wrapper	97
7.2	Other High-Level Libraries	101
7.2.1	GAS	101
7.2.2	G2S	102
7.2.3	MAT	103
7.2.4	CLS	104
8	Example: Integration of VLSICAP	105
8.1	Theory	105
8.2	Architecture and Integration Guidelines	108
8.2.1	Integration Considerations	109
8.3	Data Level Integration	110
8.3.1	Input Files needed by VLSICAP	110
8.3.2	The PIF Geometry Format	110
8.3.3	VLSICP PIF Output	112
8.4	User Interface Integration	113
8.4.1	MESHCP User Interface Integration	113
8.4.2	VCPGP Integration	114
8.4.3	VLSICP Integration	115

8.4.4	Visualizing Results	115
8.5	Example: A Microstrip Line	116
8.6	Example: A Parasitic MOSFET	119
8.6.1	Data Exchange Aspects	122
8.7	The TCAD Aspects of PIF — A Practical SFC Example	126
9	Conclusion and Future Aspects	129
9.1	Model Server	130
9.2	G3S Geometric Library	130
9.3	Object-Oriented Design Representation	130
A	The PIF Syntax	133
A.1	PIF Language Rules	133
A.2	Notation Conventions	134
A.3	PIF Syntax Definition	134
A.4	PIF Language Rules	138
B	UNFUG Reference	149
B.1	The Template File — UNFUG Expression Evaluation	149
B.2	The UNFUG Syntax	150
B.2.1	Looped Code Generation	150
B.2.2	Conditional Code Generation	151
B.2.3	Miscellaneous Functions	151
B.3	The Tuple File — Tuple Specification	152
B.4	A Simple Example	153

C VOOPS Reference	157
C.1 The Class Table	157
C.2 Methods and the Messaging Concept	159
C.3 The VOOPS Syntax	160
C.4 A Simple Example	168
Bibliography	173
List of Publications	185
Index	189
