## PART ONE: CONCEPTS, THEORIES AND FRAMEWORKS

1. Methods and Policy for Sustainable Development	3
1.1. Motivation and purpose	3
1.2. Policy for sustainable development	4
1.3. Organisation of the book	9
2. Integration of Economics, Ecology and Thermodynamics	11
2.1. A short history of environment in economics	11
2.2. Thermodynamics and ecological–economic analysis	16
2.3. Economic–ecological theoretical perspectives	21
2.4. A basic dynamic model	36
2.5. Methodological frameworks	44
3. Sustainable Development and Management	53
3.1. Environmental sustainability and economic development	53
3.2. Theoretical perspectives on sustainable development	55
3.3. Environmental functions, sustainable and multiple use	61
3.4. Nature, future generations and ethical considerations	71
3.5. Spatial aspects of sustainable development	77

## PART TWO: METHODS FOR ANALYSIS AND EVALUATION

4. Analytical Methods and Techniques	83
4.1. The need for integration of methods	83
4.2. Indicators for sustainable development	87
4.3. Natural resource accounting	94
4.4. Integrated economic–ecological models	103
4.5. Geographic information systems	113

5. Methods for Policy Analysis and Implementation	117
5.1. Support of environmental policy and management	117
5.2. Evaluation methods for decisions	118
5.3. Decision support of policies and management	127
5.4. Policy instruments for sustainable development	133
5.5. Theories, frameworks, methods and policy: Conclusions	141

### PART THREE: APPLICATION OF METHODS – CASE STUDIES

6. A Multisectoral Growth Model with Materials Flows and Economic–Ecological Interactions	147
6.1. Introduction	147
6.2. Sectors, production, equilibrium and dynamics	151
6.3. The ecological system	155
6.4. Materials balance conditions	156
6.5. Sustainable development feedback	157
6.6. Specification, calibration, scenario and sensitivity analysis	160
6.7. Conclusions	170
Appendix. List of symbols	171
7. Environmental Accounting, Materials Balances and Sustainability Indicators – Cadmium Accumulation in Soil	173
7.1. Introduction	173
7.2. ‘Sustainability’ and cadmium in the Dutch economy	175
7.3. A dynamic materials balance for cadmium	180
7.4. An indicator of sustainability	181
7.5. The environmental accounts	186
7.6. Interactions among accounts, indicators and model	198
8. Sustainable Multiple Use Management and Values of Dutch Forests	199
8.1. Forests: Multiple use, stress, economics and policy	199
8.2. The case study layout	200
8.3. Models for forest management	201
8.4. The operational multiple use forest model	204
8.5. Model tests	206
8.6. Scenario analysis by simulation	207
8.7. Multicriteria and cost-benefit evaluation	211
8.8. Conclusions	212
Appendix. Symbols of the energy language used to represent systems	216

9. A Dynamic Model of Conflicts Between Nature and Agriculture in a Dutch Region	217
9.1. Introduction	217
9.2. A case study: The Peel region in the Netherlands	217
9.3. An integrated dynamic model	219
9.4. Performance indicators	220
9.5. Scenario analysis	221
9.6. Conclusions	229
10. Multicriteria Evaluation for Sustainable Use of Australian Forests	231
10.1. Introduction	231
10.2. Problem definition	234
10.3. Problem presentation	236
10.4. Problem evaluation	237
10.5. Sensitivity analysis	241
10.6. Conclusions	242
11. Integrated Dynamic and Spatial Modelling and Multicriteria Evaluation for a Greek Island Region	243
11.1. Introduction	243
11.2. Region and problem description	243
11.3. Model structure	248
11.4. Scenario analysis	253
11.5. Multicriteria evaluation	262
11.6. Spatial evaluation	270
11.7. Conclusions	278
