

THE SOCIETY FOR APPLIED BACTERIOLOGY
SYMPOSIUM SERIES NO. 1

MICROBIAL ASPECTS OF POLLUTION

Edited by

G. SYKES

AND

F. A. SKINNER

1971

ACADEMIC PRESS · LONDON · NEW YORK

Contents

LIST OF CONTRIBUTORS	v
PREFACE	vii
Microbial Aspects of Pollution: Some General Considerations	1
J. G. DAVIS	
Introduction	1
Historical development of pollution studies	2
The microbiologist's role	6
References	9
The Health Hazards of Pollution	11
B. MOORE	
Introduction	11
Preliminary orientations	12
The assessment of microbial hazards of pollution	14
Pollution: past and present	17
Diseases due to pollution of drinking water supplies	17
Health hazards of the recreational use of water	24
Environmental pollution and food	29
References	30
Sewage Pollution of Natural Waters	33
J. H. McCOY	
Nuisances and the destruction of aquatic life	33
Pathogens in sewage	35
Bacterial content of crude sewage and sewage effluent	36
Salmonellae in an estuary	38
Sewage pollution of sea water	49
Risks to human health	49
Further reading	50
References	50
The Scope of the Water Pollution Problem	51
A. L. DOWNING	
Introduction	51
The supply of water	56

Treatment and disposal of waste waters and sludges	58
Self purification in natural waters	63
References	69
Microbial Aspects of Pollution in the Food and Dairy Industries	71
E. G. MÜLDER, J. ANTHEUNISSE AND W. H. J. CROMBACH	
Introduction	71
Microbial composition of dairy waste activated sludge	71
Principles of floc formation	75
Metabolic activity of activated sludge	77
Bulking of activated sludge	79
Waste water of the potato flour and straw board industries	83
Acknowledgments	87
References	87
Aerobic Treatment of Agricultural Wastes	91
K. ROBINSON	
Introduction	91
Possible systems	92
The environment	94
Discussion	100
References	101
The Role of Strict Anaerobes in the Digestion of Organic Material	103
P. N. HOBSON AND B. G. SHAW	
Introduction	103
The overall process of anaerobic digestion	104
Anaerobic digestion of piggery wastes	107
The bacteriology of anaerobic digestion, with special reference to the digestion of piggery wastes	110
General discussion	117
References	120
The Microbial Ecology of the Activated Sludge Process	123
E. B. PIKE AND C. R. CURDS	
Introduction	123
Typical plants and their operation	124
The activated sludge community and selective mechanisms	125

Bacteria in the activated sludge process	126
Protozoa in the activated sludge process	129
The occurrence of fungi	133
Flocculation	134
Bulking of activated sludge	136
Removal of bacteria and pathogenic organisms	136
Mathematical approach to the ecology of activated sludge	137
References	142
Disposal by Dilution?—An Ecologist's Viewpoint	149
H. A. HAWKES	
Introduction	149
The role of dilution in the disposal of wastes	150
The nature and types of pollution	152
Physical and hydrological considerations in the dispersion and mixing of effluents in the aquatic environment	153
Disposal by dilution of effluents containing harmful or undesirable organisms	156
Disposal by dilution of effluents containing toxic or other directly harmful substances	163
Disposal by dilution of effluents containing biogenic materials	168
Practice of disposal by dilution	173
Conclusions	174
References	175
Microbiological Aspects of the Pollution of Fresh Water with Inorganic Nutrients	181
D. R. KEENEY, R. A. HERBERT AND A. J. HOLDING	
Introduction	181
Nutrients limiting microbial growth	182
Sources of nitrogen and phosphorus compounds	184
Forms and quantities of nitrogen and phosphorus in lakewaters	185
Influence of oxidation-reduction potential	186
Assimilation and release of nitrogen compounds	191
General conclusions	195
Acknowledgments	196
References	196

Factors Affecting Algal Blooms	201
J. A. STEEL	
Introduction	201
Requirements for growth	202
Algae in natural environments	208
Conclusions	212
Acknowledgments	212
References	213
Nitrogen Removal from Waste Waters by Biological Nitrification and Denitrification	215
P. L. McCARTY AND R. T. HAUG	
Introduction	215
Biological nitrification	217
Biological denitrification	224
Nitrification-denitrification processes	229
Acknowledgements	230
References	230
Degradation of Herbicides by Soil Micro-organisms	233
S. J. L. WRIGHT	
Introduction	233
The fate and persistence of herbicides in the soil	234
The experimental approach	236
Microbial metabolism of herbicides	237
Conclusions	249
Acknowledgments	251
References	251
The Microbial Breakdown of Pesticides	255
R. E. CRIPPS	
Introduction	255
Problems in the study of biodegradation	256
Naturally recalcitrant molecules	257
Structural factors influencing biodegradability	258
Conclusion	265
References	265

Biodeterioration and Biodegradation of Synthetic Polymers	267
H. O. W. EGGINS, J. MILLS, A. HOLT AND G. SCOTT	
Introduction	267
The biodeterioration of plastics	268
The biodegradation of plastics	270
References	277
Disposal of Infective Laboratory Materials	281
H. M. DARLOW	
Introduction	281
Infected air	282
Infected dust and surfaces	283
Hollow-ware and cultures	284
Liquid effluents	285
Laboratory clothing	286
Animals and cage litter	287
Miscellaneous problems	287
References	288
