# Contents

Abbreviations .....	xiii
1 Introduction .....	1
2 General principles and techniques .....	4
2.1 Bioprocess monitoring techniques .....	4
2.1.1 <i>In situ</i> measurement of control variables .....	4
2.1.1.1 Temperature .....	5
2.1.1.2 Pressure .....	5
2.1.1.3 Liquid level and weight .....	5
2.1.1.4 Liquid and gas throughput .....	6
2.1.1.5 Stirrer speed and power input .....	7
2.1.1.6 pH Value of the medium .....	8
2.1.2 <i>In situ</i> measurement of state variables .....	11
2.1.2.1 Dissolved oxygen concentration in the medium .....	11
2.1.2.2 Dissolved carbon dioxide pressure $p\text{CO}_2$ in the medium .....	14
2.1.2.3 Redox potential in the medium .....	14
2.1.2.4 Ion concentrations in culture medium .....	16
2.1.2.5 Off-gas composition .....	17
2.1.2.6 Concentration and biological state of the cells	18
2.1.2.6.1 Optical methods .....	19
2.1.2.6.2 Electrochemical methods .....	23
2.1.2.6.3 Calorimetric methods .....	24
2.1.2.6.4 Acoustic methods .....	26
2.1.2.6.5 Fluorimetric methods .....	27
2.1.2.6.6 Filtration methods .....	28
2.1.2.6.7 Mass balancing methods .....	28
2.1.2.6.8 Biological state of the cells .....	29
2.1.3 On-line aseptic sampling and sample conditioning .....	30
2.1.3.1 Cell-free medium sampling with cross-flow membrane module integrated into a medium recycling loop .....	32
2.1.3.2 Cell-free medium sampling with <i>in situ</i> membrane filter .....	36

2.1.3.3	<i>In situ</i> sampling of cell-containing medium ..	40
2.1.3.4	Sampling of dissolved gas and volatile medium components .....	42
2.1.3.5	Sample conditioning .....	43
2.1.4	On-line analysis techniques .....	45
2.1.4.1	Continuous flow analysis .....	45
2.1.4.2	Flow injection analysis .....	48
2.1.4.3	High-performance liquid chromatography .....	56
2.1.4.4	Fast protein liquid chromatography .....	60
2.1.4.5	Ion chromatography .....	61
2.1.4.6	Membrane chromatography .....	63
2.1.4.7	Capillary electrophoresis .....	64
2.1.4.8	Gas chromatography .....	66
2.1.4.9	Mass spectrometry .....	68
2.1.5	Off-line analysis of key parameters .....	70
2.1.5.1	Sterility and infection .....	70
2.1.5.2	Cell size, viability and morphology .....	74
2.1.5.2.1	Cell size and viability .....	74
2.1.5.2.2	Morphology of filamentous and pellet-forming moulds .....	75
2.1.5.3	Rheology of the cultivation medium .....	81
2.1.5.4	Intracellular cell components .....	83
2.1.5.4.1	Flow cytometry .....	83
2.1.5.4.2	Nuclear magnetic resonance spectroscopy .....	84
2.1.5.4.3	Sample flow analysis .....	86
2.1.5.4.4	NADH-dependent fluorescence .....	87
2.1.5.4.5	ATP and DNA analysis and intra- cellular pH .....	89
2.1.5.5	Plasmid copy number and plasmid stability ...	89
2.1.5.5.1	Determination of stability and copy number of plasmids .....	90
2.1.5.6	Particular analytical methods .....	91
2.1.5.6.1	Some fundamentals of the waveguide technique .....	91
2.1.5.6.2	Surface plasmon resonance sensors	92
2.1.5.6.3	Inferometric immunoassays .....	93
2.1.5.6.4	Near-infrared Fourier transform spectroscopy .....	94
3	Application of general techniques to particular bioprocesses .....	96
3.1	Production of <i>Saccharomyces cerevisiae</i> .....	98
3.1.1	Process monitoring .....	102
3.1.1.1	Medium composition .....	103

3	Application of general techniques to particular bioprocesses .....	96
3.1	Production of <i>Saccharomyces cerevisiae</i> .....	98
3.1.1	Process monitoring .....	102
3.1.1.1	Medium composition .....	103

3.1.1.2	Gas composition .....	106
3.1.1.3	Concentration and state of the cells .....	106
3.1.1.4	Fluid dynamic behaviour of the multiphase system in the bioreactor .....	107
3.1.2	Cultivation of <i>Saccharomyces cerevisiae</i> .....	109
3.1.2.1	Batch cultivation .....	109
3.1.2.2	Continuous cultivation .....	111
3.1.2.3	Cell cycle and synchronous growth .....	117
3.1.3	Scale-down measurements .....	137
3.1.4	Scale-up .....	141
3.1.5	Economical, ecological and safety aspects .....	148
3.2	Production of fusion protein with recombinant <i>E. coli</i> .....	156
3.2.1	Process monitoring .....	159
3.2.1.1	Medium composition monitoring .....	159
3.2.1.2	Cell concentration and characterization .....	168
3.2.2	Cultivation of recombinant <i>E. coli</i> and production of EcoRI and the fusion protein EcoRI::SPA .....	171
3.2.2.1	Batch process .....	171
3.2.2.2	Fed-batch process .....	175
3.2.3	Economical, ecological and safety aspects .....	179
3.3	Alkaline protease production with <i>Bacillus licheniformis</i> .....	182
3.3.1	Process monitoring .....	183
3.3.1.1	Sampling .....	184
3.3.1.2	Cell mass and DNA concentrations .....	186
3.3.1.3	Soluble starch, reducing sugars, ammonium and amino acids .....	188
3.3.1.4	Protease activity and protein concentration ....	191
3.3.1.5	Phosphate concentration .....	195
3.3.1.6	Rheological investigations .....	196
3.3.2	Batch and fed-batch cultivations .....	197
3.3.3	Economical, ecological and safety aspects .....	203
3.4	Antibiotic production by fungi and streptomycetes .....	203
3.4.1	Process monitoring .....	204
3.4.1.1	Production of penicillin by <i>Penicillium chrysogenum</i> .....	204
3.4.1.2	Production of cephalosporin C by <i>Acremonium chrysogenum</i> ( <i>Cephalosporium acremonium</i> ) .....	223
3.4.1.3	Production of tetracycline by <i>Streptomyces aureofaciens</i> .....	236
3.4.1.4	Comparison of the production of these three antibiotics in stirred tank and airlift tower loop reactors .....	239

3.4.1.5	Balancing of tetracyclin production .....	246
3.4.2	Economical, ecological, and safety aspects .....	252
3.5	Continuous production of primary metabolites with suspended and immobilized microorganisms .....	258
3.5.1	Process monitoring .....	259
3.5.2	Characterization of the immobilized cell systems .....	260
3.5.2.1	Continuous cultivation of <i>Zymomonas mobilis</i> and production of ethanol with suspended and immobilized cells .....	262
3.5.2.2	Continuous cultivation of <i>Clostridium acetobutylicum</i> and production of acetone and butanol with suspended and immobilized cells .....	275
3.5.2.2.1	<i>In situ</i> product removal .....	284
3.5.2.3	Continuous cultivation of <i>Lactobacilli</i> and production of lactic acid with suspended and immobilized cells .....	285
3.5.3	Economical, ecological and safety aspects .....	296
3.6	Cultivation of animal cells and production of proteins .....	300
3.6.1	Process monitoring .....	301
3.6.1.1	Sampling .....	301
3.6.1.2	Perfusion systems .....	303
3.6.1.2.1	External perfusion systems .....	303
3.6.1.2.2	Internal perfusion systems .....	304
3.6.1.3	Monitoring of cell concentration and properties .....	307
3.6.1.3.1	Turbidometer .....	307
3.6.1.3.2	Fluorimeter .....	308
3.6.1.3.3	Flow cytometer .....	310
3.6.1.4	Nutrient and metabolite concentration monitoring .....	311
3.6.1.5	Enzyme activity monitoring .....	312
3.6.1.6	Product concentration monitoring .....	312
3.6.1.6.1	FIA immunoassays .....	313
3.6.1.6.2	Chromatographic methods .....	314
3.6.1.6.3	Mass spectrometric methods .....	314
3.6.1.6.4	Optical spectroscopic methods .....	318
3.6.1.6.5	Dynamic light scattering (DLS) .....	318
3.6.1.7	Cultivation of BHK and CHO cells and pro- duction of $\beta$ -galactosidase and antithrombin III .....	318
3.6.1.7.1	Continuous (perfusion) cultivations .....	323
3.6.1.8	Cultivation of hybridoma cells and production of monoclonal antibodies .....	326

3.6.1.9	Cultivation of <i>Spodoptera frugiperda</i> cells and production of $\beta$ -galactosidase .....	329
3.6.2	Economical, ecological, and safety aspects .....	343
3.7	Anaerobic waste water treatment .....	346
3.7.1	Process monitoring .....	350
3.7.1.1	Determination of cell concentration and activity .....	350
3.7.1.2	Analysis of the liquid phase .....	353
3.7.1.3	Analysis of the gas phase .....	355
3.7.2	Biogas production from whey: Carbon balancing .....	356
3.7.2.1	Ion charge balance .....	356
3.7.2.2	Reactor mass and ion charge balances .....	358
3.7.3	Modelling .....	361
3.7.4	Biogas production from cattle manure .....	363
3.7.4.1	Stoichiometry .....	365
3.7.5	Economical aspects .....	368
4	New Developments .....	371
4.1	Process monitoring .....	371
4.1.1	Fast sampling for intracellular metabolite analysis .....	371
4.1.2	<i>In situ</i> scanning fluorimetry for monitoring of cultivation process .....	372
4.2	Image analysis of cells and cell aggregates .....	375
4.2.1	<i>In situ</i> microscopy of cells and cell aggregates .....	375
4.2.2	<i>Ex situ</i> microscopy and image analysis of cells and cell aggregates .....	377
4.2.3	Fluorescence microscopy investigations .....	382
4.2.4	Electron microscopy investigations .....	385
4.3	Evaluation of experimental data for calculation of metabolite flux in microorganisms and animal cells .....	389
4.4	Signal evaluation, automation and expert systems for process monitoring .....	393
5	References .....	399
5.1	References to Chapter 2 .....	399
5.2	References to Chapter 3 .....	424
5.3	References to Chapter 4 .....	456
	Index .....	463
