<b>Preface</b>	<b>ix</b>
<b>Notation</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
<b>1.1 Composite structures</b>	<b>1</b>
<b>1.2 Design criteria</b>	<b>5</b>
1.2.1 General	5
1.2.2 Characteristic values	5
1.2.3 Limit states design	6
<b>1.3 Material properties</b>	<b>7</b>
1.3.1 General	7
1.3.2 Structural steel	7
1.3.3 Profiled steel	8
1.3.4 Reinforcing steel	9
1.3.5 Concrete	9
1.3.6 Rigid plastic properties	11
<b>1.4 Partial shear connection</b>	<b>13</b>
1.4.1 General	13
1.4.2 Equilibrium of forces	13
<b>1.5 Partial interaction</b>	<b>17</b>
1.5.1 Slip and slip strain	17
1.5.2 Degree of interaction	18
<b>1.6 Buckling</b>	<b>19</b>
1.6.1 General	19
1.6.2 Lateral-distortional buckling	20
1.6.3 Local buckling	21
<b>1.7 References</b>	<b>22</b>
<b>2 Sizing of members</b>	<b>23</b>
<b>2.1 Introduction</b>	<b>23</b>
<b>2.2 Shear lag</b>	<b>23</b>
2.2.1 General	23
2.2.2 Sizing for effective width	25
2.2.3 Effective section of a composite member	27
<b>2.3 Local buckling</b>	<b>29</b>
2.3.1 General	29
2.3.2 Initial local buckling	29
2.3.4 Beams in positive bending	37
2.3.5 Local buckling in shear	38
2.3.6 Concrete-filled steel tubes	39
<b>2.4 References</b>	<b>40</b>
<b>3 Elastic analysis of composite beams</b>	<b>41</b>
<b>3.1 Introduction</b>	<b>41</b>
<b>3.2 Linear material properties</b>	<b>41</b>
<b>3.3 Full interaction analysis</b>	<b>42</b>
3.3.1 Elastic transformed cross-sections	42
3.3.2 Continuous composite beams	46
3.3.3 Deflections due to creep	47
3.3.4 Deflections due to shrinkage	48
<b>3.4 Partial shear connection</b>	<b>50</b>
3.4.1 Simplified model	50
<b>3.5 Method of construction</b>	<b>51</b>
3.5.1 General	51
3.5.2 Flexural stresses	51
<b>3.6 Shear flow on connectors</b>	<b>53</b>
3.6.1 General	53
<b>3.7 References</b>	<b>55</b>

<b>4 Rigid plastic analysis of simply supported beams</b>	<b>56</b>
<b>4.1 Introduction</b>	<b>56</b>
<b>4.2 Rigid plastic flexural capacity of standard composite beams</b>	<b>56</b>
4.2.1 Equilibrium of forces at a design section	56
4.2.2 Steel component weakest	58
4.2.3 Concrete component weakest	65
4.2.4 Shear component weakest	67
4.2.5 Effect of vertical shear on the flexural capacity	69
<b>4.3 Rigid plastic flexural capacity of encased composite beams</b>	<b>70</b>
4.3.1 General	70
<b>4.4 Variation of flexural capacity along the length of the beam</b>	<b>73</b>
4.4.1 General	73
4.4.2 Uniformly distributed shear connection	73
<b>4.5 References</b>	<b>76</b>
<b>5 Mechanical Shear Connectors</b>	<b>77</b>
<b>5.1 Introduction</b>	<b>77</b>
<b>5.2 Local detailing rules</b>	<b>78</b>
5.2.1 General	78
5.2.2 Shape of stud shear connections	79
5.2.3 Spacing of stud shear connectors	79
<b>5.3 Dowel resistance to shear flow forces</b>	<b>80</b>
5.3.1 General	80
5.3.2 Mean strength in push-tests approach	80
5.3.3 Characteristic strength in composite beams approach	82
5.3.4 Composite beams with non-uniform loads	86
5.3.5 Composite beams designed using linear-elastic theory	87
<b>5.4 Fracture of shear connectors due to excessive slip in simply supported beams</b>	<b>88</b>
5.4.1 General	88
5.4.2 Slip capacities of stud shear connectors $S_{ult}$	90
5.4.3 Parametric study approach	90
5.4.4 Mixed analysis approach	92
<b>5.5 References</b>	<b>98</b>
<b>6 Transfer of longitudinal shear forces</b>	<b>99</b>
<b>6.1 Introduction</b>	<b>99</b>
<b>6.2 Shear flow planes</b>	<b>99</b>
<b>6.3 Shear flow forces</b>	<b>99</b>
<b>6.4 Generic shear flow strengths</b>	<b>101</b>
<b>6.5 Resistance of shear plane traversing depth of slab</b>	<b>103</b>
6.5.1 Shear flow strength of full depth plane	103
<b>6.6 Resistance of shear planes that encompass connectors</b>	<b>108</b>
6.6.1 Strength of planes encompassing connectors	108
<b>6.7 References</b>	<b>110</b>
<b>7 Stocky columns</b>	<b>111</b>
<b>7.1 Introduction</b>	<b>111</b>
<b>7.2 Plastic centroid and concentrically loaded column</b>	<b>112</b>
<b>7.3 General methods of analysis</b>	<b>114</b>
7.3.1 Elastic-plastic technique	114
7.3.2 Rational non-linear analysis	118
<b>7.4 Rigid plastic analysis</b>	<b>119</b>
7.4.1 General	119
7.4.2 Point 'B'	120
7.4.3 Point 'C'	122
7.4.4 Point 'D'	123
7.4.5 Allowance for shear	125
<b>7.5 References</b>	<b>125</b>
<b>8 Slender columns</b>	<b>126</b>
<b>8.1 Introduction</b>	<b>126</b>
<b>8.2 Elastic columns</b>	<b>126</b>
8.2.1 Concentric loading	126
<b>8.3 End moments</b>	<b>132</b>

8.3.1 Secondary effects	132
8.3.2 Graphical interpretation	134
<b>8.4 Moment capacity of slender composite columns</b>	<b>136</b>
8.4.1 Concentrically loaded columns	136
8.4.2 Second order effects	137
8.4.3 Moment capacity for a given column	138
<b>8.5 References</b>	<b>139</b>
<b>9 Composite beams with service ducts</b>	<b>140</b>
<b>9.1 Introduction</b>	<b>140</b>
<b>9.2 Outline of general analysis procedure</b>	<b>140</b>
<b>9.3 Maximum flexural capacity of ducted beam</b>	<b>142</b>
<b>9.4 Pure flexural capacity of ducted region</b>	<b>144</b>
9.4.1 Flexural behaviour	144
<b>9.5 Pure shear capacity of ducted region</b>	<b>146</b>
9.5.1 Mechanism of shear transfer	146
9.5.2 Pure shear capacity of steel T-section	148
9.5.3 Pure shear capacity of composite T-section	151
<b>9.6 Interaction between shear and flexure</b>	<b>155</b>
9.6.1 Failure envelope	155
<b>9.7 Enhanced shear strength due to the shear resistance of the slab</b>	<b>156</b>
9.7.1 Contribution of slab	156
<b>9.8 Strengthening ducted regions by plating</b>	<b>160</b>
9.8.1 Plating	160
<b>9.9 Service duct near supports</b>	<b>162</b>
9.9.1 General	162
<b>9.10 Embedment failure</b>	<b>165</b>
9.10.1 General	165
<b>9.11 References</b>	<b>167</b>
<b>10 Splitting</b>	<b>168</b>
<b>10.1 Introduction</b>	<b>168</b>
<b>10.2 Mechanisms of splitting</b>	<b>168</b>
<b>10.3 Splitting resistances of slabs with rectangular cross-sections</b>	<b>170</b>
10.3.1 Splitting resistance to individual connectors	170
10.3.2 Effective widths of prisms	171
<b>10.4 Effective dimensions for groups of connectors</b>	<b>174</b>
<b>10.5 Pairs of connectors</b>	<b>175</b>
10.5.1 Splitting resistance to pairs of connectors	175
<b>10.6 Groups of connectors</b>	<b>177</b>
10.6.1 Splitting resistance to groups of connectors	177
<b>10.7 Blocks of connectors</b>	<b>178</b>
10.7.1 Blocks of stud shear connectors	178
<b>10.8 Prisms with non-rectangular cross-sections</b>	<b>179</b>
10.8.1 Upper and lower bound solutions	179
10.8.2 Equivalent prism concept	180
<b>10.9 References</b>	<b>184</b>
<b>11 Post cracking dowel strength</b>	<b>185</b>
<b>11.1 Introduction</b>	<b>185</b>
<b>11.2 Hooped reinforcing bars</b>	<b>185</b>
11.2.1 Dowel strength of studs with hooped reinforcement	186
<b>11.3 Post-cracking confinement of concrete</b>	<b>188</b>
11.3.1 Dowel strength with straight transverse bars	188
<b>11.4 Post-splitting transverse forces</b>	<b>191</b>
11.4.1 Transverse splitting forces	192
<b>11.5 References</b>	<b>193</b>
<b>12 Rigid plastic analysis of continuous composite beams</b>	<b>194</b>
<b>12.1 Introduction</b>	<b>194</b>
<b>12.2 Continuous steel beams</b>	<b>195</b>
12.2.1 The plastic hinge	195
12.2.2 Requirements for plastic analysis of steel beams	199
12.2.3 Plastic analysis of continuous steel beams	199

<b>12.3 Continuous composite beams</b>	<b>203</b>
12.3.1 General	203
12.3.2 Composite plastic hinges	203
12.3.3 Plastic analysis of continuous composite beams	205
<b>12.4 References</b>	<b>207</b>
<b>13 Lateral-Distortional Buckling</b>	<b>208</b>
<b>13.1 Introduction</b>	<b>208</b>
<b>13.2 Beam strength</b>	<b>209</b>
13.2.1 General	209
13.2.2 Design by buckling analysis	209
<b>13.3 Design models</b>	<b>212</b>
13.3.1 General	212
13.3.2 Inverted u-frame approach	213
13.3.3 Empirical approach	216
<b>13.4 Recommendations</b>	<b>217</b>
<b>13.5 References</b>	<b>218</b>
<b>14 General fatigue analysis procedures</b>	<b>219</b>
<b>14.1 Introduction</b>	<b>219</b>
<b>14.2 General fatigue properties</b>	<b>219</b>
14.2.1 General	219
14.2.2 Fatigue endurances	219
14.2.3 Residual strength	221
<b>14.3 Applied loads on bridges</b>	<b>225</b>
14.3.1 General	225
14.3.2 Frequency of fatigue loads	225
14.3.3 Standard fatigue vehicles	226
14.3.4 Load spectrum	226
<b>14.4 Cyclic stress resultants</b>	<b>229</b>
14.4.1 General	229
14.4.2 Influence line diagrams	229
14.4.3 Equivalent range of cyclic forces	233
14.4.4 Force spectrum	235
<b>14.5 Frictional shear flow resistance</b>	<b>237</b>
14.5.1 General	237
14.5.2 Frictional resistance	237
14.5.3 Frictional resistance influence line diagrams	239
<b>14.6 Generic fatigue equation</b>	<b>241</b>
14.6.1 General	241
14.6.2 Generic fatigue material properties	242
14.6.3 Fatigue damage analysis	242
14.6.4 Generic fatigue equation	244
<b>14.7 References</b>	<b>245</b>
<b>15 Fatigue analysis of stud shear connections</b>	<b>246</b>
<b>15.1 Introduction</b>	<b>246</b>
<b>15.2 Stud shear connector fatigue material properties</b>	<b>246</b>
15.2.1 Crack initiation properties	247
15.2.2 Crack propagation properties	248
<b>15.3 Details of composite beam</b>	<b>249</b>
<b>15.4 Crack initiation approach</b>	<b>251</b>
15.4.1 Design mode	251
15.4.2 Assessment mode	255
<b>15.5 crack propagation approach</b>	<b>257</b>
15.5.1 Design mode	257
15.5.2 Assessment mode	261
<b>15.6 Composite building beam</b>	<b>265</b>
15.6.1 General	265
<b>15.7 References</b>	<b>268</b>
<b>Index</b>	<b>269</b>
