Preface *vii*

UNIT

1	The Object of Financial Management: Balancing Risk and Return	1
2	Financial Analysis: Liquidity	9
3	Financial Analysis: Profitability	17
4	Working Capital Management: The Statement of Changes in Financial Position	25
5	Working Capital Management: Cash Budgets	35
6	Pro Forma Statements	43
7	Simple and Compound Interest Computations	51
8	Interest Computations: Present Value and Its Application	59
9	Evaluation of Capital Expenditures: Cash Flow and Taxes	67
10	Evaluation of Capital Expenditures: Payback and Average Return	75
11	Evaluation of Capital Expenditures: Internal Rate of Return	83
12	Evaluation of Capital Expenditures: Net Present Value	91
13	Risk Estimation: Probability and Variance	99
14	Evaluating Capital Expenditures with Varying Uncertainty of Outcome	109
15	Amplification of Risk by Operating Leverage	117
16	Amplification of Risk by Financial Leverage	125
17	Cost of Capital: Securities Promising a Fixed Payment to Investors	133
18	The Cost of Common Stock Equity Capital	141
19	The Weighted Average Cost of Capital (WAAC)	149
20	Returns on Stocks and Bonds	157
21	Short- and Intermediate-Term Credit	165
22	Bonds: Limitations on Issue and Subordination	173
23	Bonds: Refunding	181
24	The Evaluation of Financial Leases	189
25	Financing with Securities Convertible into Common Stock	197
26	Corporate Stock: Cumulative Voting, Stock Dividends, Splits, Rights, and Dilution	207
27	Acquisitions and Mergers	215
28	Corporations in Trouble: Reorganization, Composition Settlements, and Liquidation	223

APPENDIX

- A Interest Rate Computations 231
- B Efficient Use of Small Electronic Calculators in Financial Computation 239
- C Table C: Given the mean (M_e) and standard deviation (Sigma or σ) of a normally distributed set of (homogeneous) events, the estimated probability that a selected tolerance limit will be exceeded by a given event, a member of the same group 249
