

BRIDGE SUBSTRUCTURE AND FOUNDATION DESIGN

Contents

PREFACE

xiii

CHAPTER 1 INTRODUCTION AND GENERAL PRINCIPLES

1

- 1.1 Bridge Engineering and Aesthetics 1
- 1.2 Pier Types 4
- 1.3 Abutment Types 19
- 1.4 Abutment Walls 27
- 1.5 Foundation Types 30
- 1.6 Subsurface Exploration and Foundation Investigations 44
- 1.7 Specifications and Standards 53
- 1.8 Cost Correlation, Superstructure versus Substructure 56
- 1.9 Design Example 1-1 61
- References 69

CHAPTER 2 LOADS AND LOADING GROUPS

72

- 2.1 General Considerations 72
- 2.2 Permanent Loads 74
- 2.3 Transient Loads 80
- 2.4 Force Effects from Superimposed Deformations 88
- 2.5 Forces on Substructure 89
- 2.6 Earthquake Effects 97
- 2.7 Transfer of Loads from Superstructure to Substructure 98
- 2.8 Distribution of Longitudinal Forces to Fixed and Expansion Piers 103
- 2.9 Numerical Examples 112
- 2.10 Load Combinations and Load Factors 117

vii

- 2.11 Case Study, Ice Load on Bridges 123
- References 125

CHAPTER 3 METHODS OF ANALYSIS AND DESIGN

127

- 3.1 General Principles 127
- 3.2 Service Load Design Method (Allowable Stress Design, ASD) 129
- 3.3 Reliability and Uncertainty in Design 131
- 3.4 Alternate Approach to Limit States 135
- 3.5 AASHTO Strength Design Method, Reinforced Concrete Structures 138
- 3.6 LRFD Principles of Strength Design (AASHTO, 1994 Specifications) 140
- 3.7 Design for Thermal Effects 142
- 3.8 Shrinkage and Creep (LRFD Specifications) 145
- 3.9 Design for Vessel Collision 147
- 3.10 Basic Philosophy of Seismic Design 149
- 3.11 Requirements of Reinforced Concrete in Seismic Design 152
- 3.12 Tolerable Differential Movement and Settlement of Bridges 165
- 3.13 Design Example 3-1, Settlement 173
- 3.14 Case Study, Forces Induced by Settlement 175
- 3.15 Design Requirements for Bridges in Waterways 177
- References 181

CHAPTER 4 PIERS FOR CONVENTIONAL BRIDGES

184

- 4.1 Pier Types 184
- 4.2 Criteria for Pier Selection 185
- 4.3 Loads and Moments on Piers: End Conditions 187
- 4.4 Effect of Temperature Change and Shrinkage 198
- 4.5 Seismic Design Considerations for Piers and Columns 201
- 4.6 Structural Capacity under Combined Axial Compression and Bending 203
- 4.7 Section Analysis 212
- 4.8 Structural Capacity of Composite Columns 217
- 4.9 Design Example 4-1: Single Shaft Pier (Load Factor Design) 220
- 4.10 Design Example 4-2: Hammerhead Pier 234
- 4.11 Design Example 4-3: Steel Bent Cap 242
- 4.12 Design Example 4-4: Steel Bent Cap for Torsional Loading 247
- 4.13 General Principles of Pier Frame Analysis 252
- 4.14 Design Example 4-5: Multiple Column Pier 261
- 4.15 Design Example 4-6: Pier Integral with Superstructure 266

- 4.16 Pier Trestles 280
- 4.17 Pier Protection Design Provisions in Navigable Waterways 281
- 4.18 Design Example 4-7: Bridge Protection in Waterways 288
- 4.19 Design Example 4-8: Pier Stability Under Stream Flow 293
- References 294

CHAPTER 5 PIERS FOR SPECIAL BRIDGES

298

- 5.1 Structural Interaction of Elastic Piers in Multi-Span Arch Bridges 298
- 5.2 Towers for Suspension Bridges 302
- 5.3 Towers and Pylons for Cable-Stayed Bridges 311
- 5.4 Piers for Segmental Concrete Bridges 329
- 5.5 Piers for Movable Bridges 361
- 5.6 Supports Integral with Superstructure 367
- References 379

CHAPTER 6 WALL SYSTEMS

381

- 6.1 Diaphragm Walls in Traffic Underpasses 381
- 6.2 Gravity and Semi-Gravity Walls 392
- 6.3 Mechanically Stabilized Earth Walls and Prefabricated Modular Walls 395
- 6.4 Ground Movement in Excavations 396
- 6.5 Design Principles of Diaphragm Walls 402
- 6.6 Design Principles of Gravity and Semi-Gravity Walls 416
- 6.7 Commentary on Mechanically Stabilized Earth Walls 425
- 6.8 Commentary on Prefabricated Modular Walls 428
- 6.9 Design Example 6-1, Traffic Underpass 430
- 6.10 Design Example 6-2, Anchored Diaphragm Wall 435
- 6.11 Design Example 6-3, Stability of Ground-Anchored Wall System 437
- 6.12 Design Example 6-4, Posttensioned Diaphragm Wall 439
- 6.13 Seismic Design Requirements of Wall Systems 443
- References 446

CHAPTER 7 ABUTMENTS

449

- 7.1 Top of Abutment Details and Treatment 449
- 7.2 Pile Bent (Stub) Abutments, Design Considerations 452
- 7.3 Closed (Full) Abutments, Design Considerations 454
- 7.4 Gravity and Semi-Gravity Abutments, Design Considerations 456
- 7.5 Abutments on Mechanically Stabilized Earth Walls 456

7.6	Abutments on Modular Systems	458
7.7	Wing Walls	459
7.8	Abutments for Segmental Bridges	461
7.9	Seismic Design of Abutments	465
7.10	Design Example 7-1, Pile Bent Abutments, ASD Method	473
7.11	Design Example 7-2, Full Abutment	479
7.12	Design Example 7-3, Spill-Through Abutment	486
7.13	Design Example 7-4, Abutment of a Simple Span Deck Truss Bridge	492
7.14	Abutments for Arch Bridges	496
7.15	Abutments for Suspension Bridges	500
7.16	Integral Abutments	503
7.17	Prefabricated Concrete Sections	508
	References	508

CHAPTER 8 FOOTINGS

510

8.1	Factors Affecting Selection of Foundation Type	510
8.2	Footing Types	514
8.3	Bearing Capacity Theories	515
8.4	Presumptive Bearing Pressures	523
8.5	Bearing Pressures from Tests	523
8.6	Bearing Resistance of Rock	526
8.7	Failure by Sliding	529
8.8	AASHTO and LRFD Requirements	529
8.9	Settlement of Footings in Soil, Methods of Analysis	531
8.10	Settlement of Footings in Rock	544
8.11	Structural Action of Footings	546
8.12	Flexural Strength of Modified Square Footing, Case Study	557
8.13	Strut-and-Tie Model (LRFD Specifications)	561
8.14	Design Example 8-1, Bearing Capacity by ASD	565
8.15	Design Example 8-2, Settlement of Footings	570
8.16	Design Example 8-3, Footing in Rock	573
8.17	Design Example 8-4, Bearing Capacity by Strength Design	576
8.18	Design Example 8-5, Load Factor Design	576
8.19	Design Example 8-6, Strip Footing	579
8.20	Seismic Design Requirements	580
	References	584

CHAPTER 9 DRIVEN PILES

588

9.1	Soil-Pile Interaction	588
9.2	Pile Types and Selection Criteria	595

9.3	Design Considerations	603
9.4	Design Approach	606
9.5	Movement and Bearing Resistance at the Service Limit State	609
9.6	Design of Piles for Axial Load, Structural Capacity	613
9.7	Design of Piles for Axial Load, Geotechnical Capacity of Single Pile	618
9.8	Bearing Capacity of Pile Groups	631
9.9	Uplift Considerations	632
9.10	Negative Skin Friction	634
9.11	Pile Foundations Under Lateral Loads	636
9.12	Structural Capacity of Piles Subjected to Axial Load and Bending	655
9.13	Design Examples	662
9.14	Bridge Foundations Without Piles	670
	References	674

CHAPTER 10 DRILLED SHAFT FOUNDATIONS

678

10.1	Assessment of Construction Methods	678
10.2	Practical Considerations	681
10.3	Usual Defects and Repairs	683
10.4	AASHTO Requirements	684
10.5	Design Requirements	687
10.6	Generalized Design Approach	690
10.7	Structural Capacity for Axial Load	693
10.8	Geotechnical Strength (Bearing Capacity), Axially Loaded Shafts	695
10.9	Bearing Capacity from Load Tests	701
10.10	Axial Resistance in Rock	704
10.11	Group Action	707
10.12	Safety Factors for ASD	709
10.13	Settlement Considerations	710
10.14	Negative Skin Resistance (Downdrag)	715
10.15	Uplift Resistance	716
10.16	Drilled Shafts under Lateral Load	717
10.17	Flexural Analysis, Laterally Loaded Shafts	729
10.18	Design Examples	734
	References	750

CHAPTER 11 PRISMATIC AND LINEAR FOUNDATIONS

753

11.1	Shapes and Configurations	753
11.2	Construction Considerations	754

11.3	The Transfer of Axial Load: Basic Concepts	759
11.4	Data from Load Tests	760
11.5	Guidelines for the Design of Load Bearing Linear and Prismatic Elements	765
11.6	Structural Capacity for Axial Load	766
11.7	Geotechnical Capacity: Axial Load in Cohesive Soils	767
11.8	Geotechnical Capacity: Axial Load in Cohesionless Soils	768
11.9	Axial Resistance in Rock	770
11.10	Group Action	770
11.11	Settlement Considerations	771
11.12	Downdrag and Uplift	773
11.13	Effects of Lateral Load	774
11.14	Structural Capacity Under Bending and Axial Load	778
11.15	Design Example 11-1	779
	References	781

CHAPTER 12 STRENGTHENING AND REHABILITATION

783

12.1	Design Options to Reduce Maintenance and Repair	783
12.2	Procedures for Detecting Defects and Deterioration	786
12.3	Assessment of Deficiencies of Substructures Below the Water Line	791
12.4	Repair of Scour Damage	796
12.5	Methods for Strengthening Substructures	802
12.6	Replacement and Repair Methods	809
12.7	Repair and Methods to Arrest Concrete Deterioration Below the Water Line	821
12.8	Example of Inspection Guidelines: Assessment of Underwater Concrete	824
12.9	Example of Structural Capacity Analysis	825
12.10	Example of Bridge Rehabilitation	828
	References	834
