

RECOMMENDATIONS OF THE COMMITTEE FOR WATERFRONT STRUCTURES EAU 1980

Issued by the
Committee for Waterfront Structures
of the Society for Harbor Engineering
and the German Society for Soil Mechanics
and Foundation Engineering

Fourth English Edition
(English Translation of the Sixth German Edition)

with 159 Illustrations

1982

Summary of the prefaces to the first to the third expanded English editions and preface to the fourth expanded English edition (EAU 1980)	IX
Summary of the prefaces to the second to the fifth expanded German editions and preface to the sixth expanded German edition (EAU 1980)	X
Preface to the first German edition	XIV
List of Recommendations R 1 to R 150	XXIII

A Published Recommendations 1

0 Statical Calculations 1

0.1 Preparation of statical calculations for waterfront structures (R 142)	1
0.2 Employment of electronic calculations for waterfront structures (R 143)	3

1 Soil Exploratory Work, Soil Investigations and Theoretical Soil Properties . . . 8

1.1 Preparation of reports and expert opinions on subsoil conditions for constructing waterfront structures under difficult conditions (R 150)	8
1.2 Layout and depth of borings and of static and dynamic penetrometer tests (R 1)	12
1.3 Determination of the shear strength c_u from undrained tests on saturated, cohesive soil samples (R 88)	14
1.4 Determination of the effective shear parameters φ' and c' (R 89)	17
1.5 Determination of the angle of internal friction φ' for non-cohesive soils (R 92)	21
1.6 Safety factors for use in connection with the Recommendations (R 96)	23
1.7 Investigation of the degree of density of non-cohesive backfill for waterfront structures (R 71)	26
1.8 Influence of compaction by vibration on the properties of non-cohesive soils (R 48)	27
1.9 Shear parameters for the state of failure or of sliding when using the EAU (R 131)	28
1.10 Mean soil properties for preliminary designs (R 9)	30
1.11 Soil properties for final designs (R 54)	32

2 Active and Passive Earth Pressures 33

2.1 Cohesion in cohesive soils (R 2)	33
2.2 Apparent cohesion in sand (R 3)	33
2.3 Assumed angle of wall friction in sheet piling structures (R 4) (see 8.2.3)	33
2.4 Active earth pressure on sheet piling in front of walls on pile foundations (R 45) (see 11.2)	33
2.5 Effect of artesian water under the harbor bottom or river bed, on active and passive earth pressures (R 52)	34

	Page
2.6 Determination of active earth pressure in saturated, non- or partially consolidated, soft cohesive soils (R 130)	36
2.7 Action of active earth pressure and water pressure difference and construction hints for waterfront structures with soil replacement and fouled or disturbed dredge pit bottom (R 110)	39
2.8 Effects of percolating ground water on water pressure difference, active and passive earth pressures (R 114)	44
2.9 Effects of earthquakes on the design and dimensioning of waterfront structures (R 124)	50
3 Slope Failure, Foundation Failure and Sliding (see 8.4.9 and 8.4.10)	57
3.1 Relevant standards	57
3.2 Safety against failure by heave (R 115)	58
3.3 Foundation failure due to subsurface erosion; its occurrence and its prevention (R 116)	60
4 Water Levels, Water Pressure Difference, Drainage, Influence of waves	63
4.1 Mean ground water level in tidal areas (R 58)	63
4.2 Water pressure difference in direction of water side (R 19)	63
4.3 Water pressure difference on sheet piling in front of built-over embankments in tidal areas (R 65)	63
4.4 Design of sheet piling drainage with filter weepholes (R 51)	65
4.5 Design of sheet piling drainage with flap valves in tidal areas (R 32)	66
4.6 Design of backwater drainage for concrete quays in tidal areas (R 75)	70
4.7 Relieving artesian pressure under harbor bottoms (R 53)	71
4.8 Design of ground water flow nets (R 113)	73
5 Ship Dimensions and Loading of Waterfront Structures	79
5.1 Usual ship dimensions (R 39)	79
5.2 Assumed berthing load of vessels at quays (R 38)	82
5.3 Berthing velocities of vessels transverse to berth (R 40)	83
5.4 Loading classes (R 18)	83
5.5 Vertical live loads (R 5)	84
5.6 Wave pressure on vertical waterfront structures (R 135)	88
5.7 Determination of the design wave for marine and harbor structures (R 136)	95
5.8 Layout and loading of bollards for seagoing vessels (R 12)	103
5.9 Layout and loading of mooring hooks (R 13) (see 6.11)	105
5.10 Layout, design and loading of mooring devices for vessels at embankments in inland harbors (R 102)	105
5.11 Dimensions and load data for usual general cargo and container cranes in seaports (R 84)	107
6 Configuration of Cross-Section and Equipment of Waterfront Structures	113
6.1 Standard dimensions of cross-section of quays for seagoing vessels (R 6)	113
6.2 Top elevation of waterfront structures in seaports (R 122)	114
6.3 Standard dimensions of cross-section of waterfront structures in inland harbors (R 74)	119

	Page
6.4 Design of waterfront structures for cargo handling harbors in inland canals (R 82)	122
6.5 Sheet piling waterfront on canals for inland vessels (R 106)	122
6.6 Partially sloped bank construction at inland harbors with extreme water level fluctuations (R 119)	124
6.7 Nominal depth of harbor bottom at quay walls (R 36)	127
6.8 Overdepth dredging at quay walls (R 37)	128
6.9 Layout and loading of bollards for seagoing vessels (R 12) (see 5.8)	130
6.10 Equipping of berths for large vessels with quick release hooks (R 70)	130
6.11 Layout, design and loading of light mooring facilities for ships at vertical waterfront structures (R 13)	130
6.12 Layout, design and loading of access ladders (R 14)	132
6.13 Layout and design of stairs in seaports (R 24)	133
6.14 Fenders for berths for large vessels at quays (R 60)	135
6.15 Suspended brushwood fenders for berths for large vessels at quays (R 61)	135
6.16 Fenders in inland harbors (R 47)	137
6.17 Elastomer fendering and elastomer fender elements for seaports (R 141)	140
6.18 Acceptance conditions for fender elastomers (R 62)	149
6.19 Elastomer bearings for harbor jetties and footbridges (R 63)	150
6.20 Foundation of cranes at waterfront structures (R 120)	152
6.21 Crane rails and their installation on concrete (R 85)	155
6.22 Rails bonded to concrete for railroad and crane tracks (R 108)	159
7 Earthwork in Harbors	165
7.1 Dredging in front of vertical waterfront structures in seaports (R 80)	165
7.2 Overdepth dredging at quay walls (R 37) (see 6.8)	166
7.3 Dredging and hydraulic fill tolerances (R 139)	166
7.4 Hydraulic filling of port areas for planned waterfront structures (R 81)	169
7.5 Backfilling of waterfront structures (R 73)	173
7.6 Dredging of underwater slopes (R 138)	175
7.7 Scour and scour protection at waterfront structures (R 83)	178
7.8 Vertical drains for accelerating the consolidation of soft cohesive soils (R 93)	179
7.9 Soil replacement procedure for waterfront structures (R 109)	183
7.10 Action of active earth pressure and water pressure difference and construction hints for waterfront structures with soil replacement and fouled or disturbed dredge pit bottom (R 110) (see 2.7)	188
7.11 Calculation and design of rubble mound moles and breakwaters (R 137)	189
8 Sheet Piling Structures	194
8.1 Material and Construction	194
8.1.1 Design and driving of timber sheeting (R 22)	194
8.1.2 Design and driving of reinforced concrete sheet piling (R 21)	196
8.1.3 Mixed (combined) steel sheet piling (R 7)	199
8.1.4 Shear resistant interlock welding of connected steel sheet piling (R 103)	200
8.1.5 Selection of the section and material for sheet piling (R 34)	203
8.1.6 Quality requirements of steels in steel sheet piles (R 67)	204
8.1.7 Tolerances for interlock dimensions in steel sheet piles (R 97)	205
8.1.8 Acceptance conditions for steel sheet piles and steel piles at the site (R 98)	208

	Page
8.1.9 Corrosion of steel sheet piling and counter measures (R 35)	208
8.1.10 Danger of sand abrasion on sheet piling (R 23)	210
8.1.11 Ratio costs of a steel sheet piling structure (R 8)	210
8.1.12 Practical batter of sheet piling in harbor installations (R 25)	210
8.1.13 Driving inclination for sheet piling (R 15)	211
8.1.14 Driving of "U"- or "Z"-shaped steel sheet piles (R 118)	211
8.1.15 Driving of mixed (combined) steel sheet piling (R 104)	217
8.1.16 Installation of mixed (combined) steel sheet piling with spud vibrators (R 105)	220
8.1.17 Sound-muffled driving of sheet piles and of precast piles (R 149)	223
8.1.18 Driving of steel sheet piles and steel piles at low temperatures (R 90)	225
8.1.19 Design and dimensioning of pile driving trestles (R 140)	225
8.1.20 Design of welded joints in steel sheet piles and steel piles (R 99)	232
8.1.21 Burning off the tops of driven steel sections for load-bearing welded connections (R 91)	236
8.1.22 Watertightness of steel sheet piling (R 117)	237
8.1.23 Waterfront structures in regions subject to mining subsidence (R 121)	238
8.2 Calculation and Design of Sheet Piling	242
8.2.1 Calculation of single-anchored sheet piling structures (R 77)	242
8.2.2 Calculation of double-anchored steel sheet piling structures (R 134)	243
8.2.3 Assumed angle of wall friction in sheet piling structures (R 4)	246
8.2.4 Allowable stresses in sheet piling structures (R 20)	246
8.2.5 Check of stresses in sheet piling (R 44)	249
8.2.6 Selection of embedment of sheet piling (R 55)	250
8.2.7 Determination of embedment with partial or full fixity of the point of the sheet piling (R 56)	250
8.2.8 Staggered embedment of steel sheet piling (R 41)	253
8.2.9 Vertical load capacity of sheet piling (R 33)	255
8.2.10 Capacity of steel sheet piling to absorb horizontal longitudinal forces acting parallel to the shore (R 132)	256
8.2.11 Staggered design of anchor walls (R 42)	259
8.2.12 Steel sheet piling driven into bedrock (R 57)	259
8.2.13 Sheet piling in unconsolidated, soft cohesive soils (R 43)	260
8.2.14 Effects of earthquakes on the design and dimensioning of waterfront structures (R 124) (see 2.9)	261
8.2.15 Design and dimensioning of single-anchored sheet piling structures in earthquake areas (R 125)	261
8.3 Calculation and Design of Cofferdams	263
8.3.1 Cellular cofferdams as excavation enclosures and as permanent waterfront structures (R 100)	263
8.3.2 Double-wall cofferdams as excavation enclosures and as permanent waterfront structures (R 101)	268
8.4 Wales, Cappings, Anchors	272
8.4.1 Design of steel wales for sheet piling (R 29)	272
8.4.2 Design and calculation of steel wales (R 30)	273
8.4.3 Wales of reinforced concrete for sheet piling with driven steel anchor piles (R 59)	275
8.4.4 Steel capping beams for waterfront structures (R 95)	279

	Page
8.4.5 Reinforced concrete capping beams for waterfront structures (R 129)	282
8.4.6 Top steel nosing for reinforced concrete walls and capping beams at waterfront structures, especially those for cargo handling (R 94)	287
8.4.7 Elevation of the anchor connection in a free earth support deadman or anchor wall (R 11)	288
8.4.8 Auxiliary anchoring at the top of steel sheet piling structures (R 133)	288
8.4.9 Check of stability of anchoring at lower failure plane (R 10)	291
8.4.10 Safety against failure of anchoring soil (to R 10)	297
8.4.11 Sheet piling anchorings in unconsolidated, soft cohesive soils (R 50)	298
8.4.12 Design, anchoring and calculation of protruding corner structures in anchored sheet piling construction in seaports (R 31)	301
8.4.13 Design of protruding quay wall corners with batter pile anchoring (R 146)	303
8.4.14 Hinged support of quay wall superstructures on steel sheet piling (R 64)	306
8.4.15 Flexible connection of driven steel anchor piles to steel sheet piling structures (R 145)	310
9 Anchor Piles	318
9.1 Safety factors for anchoring (R 26)	318
9.2 Maximum pull-out force on anchor piles (R 27)	319
9.3 Design and embedment of flat battered driven steel anchor piles (R 16)	320
9.4 Design and loading of driven, pressure-grouted anchor piles (R 66)	322
9.5 Design and loading of horizontal or inclined, bored anchor piles with enlarged points (R 28)	324
10 Waterfront Structures, Quays and Superstructures of Concrete and Reinforced Concrete	327
10.1 Design of quays and superstructures (R 17)	327
10.2 Construction of reinforced concrete waterfront structures (R 72)	328
10.3 Design of reinforced concrete roadway slabs on piers (R 76)	332
10.4 Box caissons as substructure for waterfront structures in seaports (R 79)	333
10.5 Pneumatic caissons as substructure for waterfront structures in seaports (R 87)	337
10.6 Design and dimensioning of quay walls in blockwork construction (R 123)	340
10.7 Design and dimensioning of quay walls in blockwork construction in earthquake areas (R 126)	346
10.8 Construction and design of quay walls, using the open caisson method (R 147)	347
10.9 Construction and design of quay walls in earthquake regions, using the open caisson method (R 148)	351
10.10 Application and design of bored pile walls (R 86)	351
10.11 Application and design of diaphragm walls (R 144)	354
11 Waterfront Structures on Pile Foundations	360
11.1 Design of walls on pile foundations (R 17)	360
11.2 Active earth pressure on sheet piling in front of walls on pile foundations (R 45)	360
11.3 Calculation of level, elevated walls on pile foundations with rigid relieving platform (R 78)	366

	Page
11.4 Design and dimensioning of walls on pile foundations in earthquake areas (R 127)	366
12 Design of Harbor Embankments	368
12.1 Embankments in inland ports on rivers with large fluctuations in water level (R 49)	368
12.2 Embankments in seaports and inland harbors with tide (R 107)	370
12.3 Embankments under quay wall superstructures behind sheet piling (R 68)	377
12.4 Partially sloped bank construction at inland harbors with extreme water level fluctuations (R 119) (see 6.6)	377
13 Dolphins	378
13.1 Design of resilient dolphins with parallel piles, in non-cohesive soils (R 69)	378
13.2 Spring constant for the calculation and dimensioning of heavy fendering and heavy berthing dolphins (R 111)	379
13.3 Impact forces and required energy absorption capacity of fenders and dolphins in seaports (R 128)	383
13.4 Use of high-strength, weldable structural steels in elastic berthing and mooring dolphins in marine construction (R 112)	386
14 Experience with Overloaded, Shifted or Collapsed Waterfront Structures, Life-Span	390
14.1 Average service life of waterfront structures (R 46)	390
B Future Work Program	391
C Bibliography	395
1 Annual technical reports	395
2 Books and papers	395
3 Standards and regulations	399
D List of Conventional Symbols	403
E Key Word Index	406

List of Recommendations R 1 to R 150

Appeared in First German Edition:¹⁾

	Section	Page
R 1 Layout and depth of borings and of static and dynamic penetrometer tests	1.2	12
R 2 Cohesion in cohesive soils	2.1	33
R 3 Apparent cohesion in sand	2.2	33
R 4 Assumed angle of wall friction in sheet piling structures	8.2.3	246
R 5 Vertical live loads	5.5	84
R 6 Standard dimensions of cross-section of quays for seagoing vessels	6.1	113
R 7 Mixed (combined) steel sheet piling	8.1.3	199
R 8 Ratio costs of a steel sheet piling structure	8.1.1.1	210
R 9 Mean soil properties for preliminary designs	1.10	30
R 10 Check of stability of anchoring at lower failure plane	8.4.9	291
and safety against failure of the anchoring soil	8.4.10	297
R 11 Elevation of the anchor connection in a free earth support deadman or anchor wall	8.4.7	288
R 12 Layout and loading of bollards for seagoing vessels	5.8	103
R 13 Layout, design and loading of light mooring facilities for ships at vertical waterfront structures	6.11	130
R 14 Layout, design and loading of access ladders	6.12	132
R 15 Driving inclination for sheet piling	8.1.1.3	211
R 16 Design and embedment of flat battered driven steel anchor piles	9.3	320
R 17 Design of quays and superstructures	10.1	327
and design of walls on pile foundations	11.1	360
R 18 Loading classes	5.4	83
R 19 Water pressure difference in direction of water side	4.2	63
R 20 Allowable stresses in sheet piling structures	8.2.4	246
R 21 Design and driving of reinforced concrete sheet piling	8.1.2	196
R 22 Design and driving of timber sheeting	8.1.1	194
R 23 Danger of sand abrasion on sheet piling	8.1.10	210
R 24 Layout and design of stairs in seaports	6.13	133
R 25 Practical batter of sheet piling in harbor installations	8.1.1.2	210
R 26 Safety factors for anchoring	9.1	318
R 27 Maximum pull-out force on anchor piles	9.2	319
R 28 Design and loading of horizontal or inclined, bored anchor piles with enlarged points	9.5	324
R 29 Design of steel wales for sheet piling	8.4.1	272
R 30 Design and calculation of steel wales	8.4.2	273

The 2nd German Edition was Expanded by:

R 31 Design, anchoring and calculation of protruding corner structures in anchored sheet piling construction in seaports	8.4.12	301
--	--------	-----

¹⁾ The first appearance in a collected publication is given in each case. Later revisions and supplementations are not indicated
