|---|------|
| <b>Glossary</b> . . . . .   | xiii |
| <b>Preface</b> . . . . .  | xix  |
| <b>Acknowledgements.</b> . . . . .  | xxi  |
| <b>Chapter 1: General Introduction</b> . . . . .  | 1    |
| From human-computer interaction to Cognitive Ergonomics. . . . .                          | 1    |
| <b>Part I. The Cognitive Perspective</b> . . . . .  | 5    |
| <b>Introduction</b> . . . . .   | 7    |
| The theory chosen. . . . .  | 7    |
| One basic principle . . . . .   | 7    |
| Overview of part I. . . . .   | 9    |
| <b>Chapter 2: Some Basics of Cognition</b> . . . . .                                      | 10   |
| The evolution of cognition . . . . .  | 10   |
| The system from which cognition arises . . . . .  | 10   |
| Cognitive Performance and Arousal . . . . .   | 13   |
| Selective attention. . . . .  | 15   |
| Attention and effort . . . . .  | 17   |
| Implications of human self-regulation for human-computer<br>interaction . . . . .         | 18   |
| Sensory-motor characteristics. . . . .  | 20   |
| Quantitative characteristics of vision and audition . . . . .                             | 20   |
| Qualitative characteristics of vision . . . . .   | 22   |
| Qualitative attributes of audition . . . . .  | 25   |
| Motor characteristics . . . . .   | 26   |
| Implications of sensory-motor characteristics for human-computer<br>interaction . . . . . | 27   |
| Summary . . . . .   | 29   |

|  |           |
|--|-----------|
| <b>Chapter 3: Long-Term and Working Memory . . . . .</b>                 | <b>31</b> |
| Long-term memory . . . . .   | 31        |
| Declarative knowledge . . . . .  | 32        |
| Procedural knowledge . . . . .   | 36        |
| Working memory . . . . .   | 38        |
| Some experimental paradigms. . . . .                                     | 39        |
| Can working memory be separated from other types of memory?. . . . .     | 40        |
| Implications for human-computer interaction . . . . .                    | 41        |
| Summary . . . . .  | 42        |
| <br>   |           |
| <b>Chapter 4: Complex Information Processing . . . . .</b>               | <b>44</b> |
| Problem solving . . . . .  | 44        |
| Tasks which are difficult to represent. . . . .                          | 45        |
| Search problems . . . . .  | 48        |
| Decisions and predictions. . . . .                                       | 51        |
| Subjective value. . . . .  | 51        |
| Subjective probability . . . . .   | 52        |
| Integration of information . . . . .                                     | 53        |
| Predictions . . . . .  | 54        |
| Human logic . . . . .  | 56        |
| Are people illogical?. . . . .   | 56        |
| Representation of logical tasks . . . . .                                | 58        |
| Operations in logical tasks . . . . .                                    | 59        |
| Metacognition . . . . .  | 60        |
| Skilled cognitive performance . . . . .                                  | 63        |
| Summary . . . . .  | 65        |
| Solutions to problems . . . . .  | 65        |
| <br>   |           |
| <b>Chapter 5: Learning Computerized Tasks . . . . .</b>                  | <b>68</b> |
| General learning principles . . . . .                                    | 68        |
| Bottom-up learning . . . . .   | 68        |
| Top-down learning . . . . .  | 69        |
| Procedural learning . . . . .  | 70        |
| Forgetting . . . . .   | 72        |
| Particular learning principles related to a computer situation . . . . . | 73        |
| Transfer of knowledge . . . . .  | 74        |
| What prior knowledge is evoked? . . . . .                                | 75        |
| Describing prior knowledge . . . . .                                     | 75        |
| Transfer effects . . . . .   | 76        |
| Empirical data . . . . .   | 77        |
| Conclusion . . . . .   | 82        |

|  |            |
|--|------------|
| Learning by doing . . . . .                                    | 82         |
| Understanding the nature of the problem space . . . . .        | 83         |
| Learning to search in a given problem space . . . . .          | 90         |
| The role of mental models of computer systems . . . . .        | 95         |
| Some characteristics of the "model" concept . . . . .          | 95         |
| What reality is covered by a system model? . . . . .           | 97         |
| The conceptual status of a mental model . . . . .              | 98         |
| Functions of mental models . . . . .                           | 99         |
| Form of models . . . . .                                       | 102        |
| The role of models in learning computer systems . . . . .      | 103        |
| Validity of model . . . . .                                    | 103        |
| A study of models of varying task validity . . . . .           | 104        |
| The completeness of the model . . . . .                        | 106        |
| How users think about their models . . . . .                   | 107        |
| Summary . . . . .  | 111        |
| General learning principles . . . . .                          | 111        |
| Transfer of prior knowledge . . . . .                          | 111        |
| Learning by problem solving . . . . .                          | 112        |
| Mental model formation . . . . .                               | 112        |
| <b>Chapter 6: Individual Differences . . . . .</b>             | <b>113</b> |
| Stability of human differences . . . . .                       | 113        |
| System-related individual differences . . . . .                | 114        |
| Users' prior knowledge . . . . .                               | 114        |
| Users' cognitive and learning styles . . . . .                 | 115        |
| Stable personality characteristics . . . . .                   | 117        |
| Implications for human-computer interaction . . . . .          | 118        |
| Summary . . . . .  | 119        |
| <b>Part II. The Task Perspective . . . . .</b>                 | <b>121</b> |
| <b>Chapter 7: A General Frame of Reference . . . . .</b>       | <b>123</b> |
| A general overview . . . . .                                   | 123        |
| The task . . . . .   | 125        |
| Division of labour . . . . .                                   | 127        |
| Task models . . . . .  | 130        |
| Do task experts need a particular system task model? . . . . . | 131        |
| Do system designers need particular task models? . . . . .     | 131        |
| Communication between users and system designers . . . . .     | 132        |
| Human-computer communication . . . . .                         | 133        |
| Metacommunication . . . . .                                    | 137        |
| User's model of task in system . . . . .                       | 137        |

|  |            |
|--|------------|
| Example of a user's system model . . . . .                               | 138        |
| System's model of user . . . . .   | 140        |
| Embedded user models . . . . .   | 142        |
| Summary . . . . .  | 143        |
| <b>Chapter 8: From Ideas to Text . . . . .</b>                           | <b>145</b> |
| The writing process . . . . .  | 145        |
| Retrieval of ideas . . . . .   | 145        |
| Analysis of ideas . . . . .  | 146        |
| Organization of ideas . . . . .  | 146        |
| Sequencing of ideas . . . . .  | 146        |
| Translation of ideas into text . . . . .                                 | 146        |
| Writing the text . . . . .   | 147        |
| Order and content of activities . . . . .                                | 147        |
| Writing strategies . . . . .   | 147        |
| Division of labour . . . . .   | 148        |
| Implications for computer support . . . . .                              | 148        |
| Idea processing . . . . .  | 149        |
| Task analysis . . . . .  | 149        |
| Concepts and operations in an idea processing support system . . . . .   | 152        |
| Outline support . . . . .  | 155        |
| Task analysis . . . . .  | 155        |
| Conceptual objects and operations in an outline support system . . . . . | 155        |
| Translating ideas into text . . . . .                                    | 156        |
| Writing text . . . . .   | 158        |
| Task analysis . . . . .  | 158        |
| Conceptual objects and the operations of wordprocessors . . . . .        | 159        |
| Human-computer communications and wordprocessors . . . . .               | 161        |
| Implications for human-computer communication . . . . .                  | 164        |
| Effects of wordprocessors . . . . .                                      | 164        |
| Summary . . . . .  | 165        |
| <b>Chapter 9: From Question to Answer . . . . .</b>                      | <b>168</b> |
| Introduction . . . . .   | 168        |
| Database search . . . . .  | 171        |
| Matching information need to existing data . . . . .                     | 171        |
| The importance of prior knowledge . . . . .                              | 173        |
| Search strategies . . . . .  | 173        |
| Formulation of query . . . . .   | 174        |
| Logical problems . . . . .   | 174        |
| Data models . . . . .  | 176        |
| The procedural/declarative distinction . . . . .                         | 178        |

|   |            |
|---|------------|
| Syntactical aspects . . . . .   | 178        |
| Evaluating the result of a database search . . . . .  | 180        |
| Effects of databases . . . . .  | 181        |
| Summary . . . . .   | 182        |
| <b>Chapter 10: From Problem to Solution . . . . .</b>   | <b>183</b> |
| From data to knowledge . . . . .  | 183        |
| Artificial intelligence as a background to knowledge systems. . . . .                               | 184        |
| Some problems encountered by artificial intelligence . . . . .                                      | 184        |
| Knowledge systems as experts or tools . . . . .   | 187        |
| Expert systems . . . . .  | 188        |
| Applications of expert systems . . . . .  | 189        |
| The conventional procedure in building expert systems . . . . .                                     | 190        |
| The bottleneck problem in acquiring expert knowledge . . . . .                                      | 191        |
| The problem of representing knowledge. . . . .  | 193        |
| Interactive problem solving . . . . .   | 194        |
| Knowledge systems as tools . . . . .  | 197        |
| User interface to knowledge systems . . . . .   | 197        |
| Communication . . . . .   | 197        |
| Explanation facilities . . . . .  | 198        |
| Conclusion . . . . .  | 200        |
| Summary . . . . .   | 201        |
| <b>Chapter 11: From Function to Form on Computer Support in Design<br/>    Engineering. . . . .</b> | <b>203</b> |
| Introduction . . . . .  | 203        |
| The design process . . . . .  | 203        |
| Different levels . . . . .  | 204        |
| Different phases. . . . .   | 204        |
| Different activities. . . . .   | 205        |
| Conclusion . . . . .  | 206        |
| Ideas on computer support for design . . . . .  | 206        |
| A scenario for computer support. . . . .  | 207        |
| Different supports for different activities . . . . .   | 207        |
| Information retrieval and the assessment of relevance. . . . .                                      | 208        |
| Integration of information . . . . .  | 210        |
| Creation of alternatives . . . . .  | 211        |
| Inferencing. . . . .  | 212        |
| Predictions . . . . .   | 212        |
| Search among alternatives . . . . .   | 213        |
| Checking . . . . .  | 214        |
| Diagnosing faults . . . . .   | 215        |

- Communication . . . . . 216
- Integration of computer tools . . . . . 217
- Experience of current CAD systems . . . . . 219
  - General characteristics of CAD systems . . . . . 220
  - CAD systems in use . . . . . 222
  - Experience of functional aspects . . . . . 223
  - Experience of system handling . . . . . 224
  - Experience of access aspects . . . . . 229
  - Experience of training in the use of CAD . . . . . 230
  - Experience of the effects of CAD . . . . . 233
- Summary . . . . . 234
  
- Part III. The Interface Perspective . . . . . 237**
- Introduction . . . . . 239**
  
- Chapter 12: Communication Styles . . . . . 241**
  - Menu selection . . . . . 241
  - Form fill-in. . . . . 243
  - Command language . . . . . 243
  - Natural language . . . . . 244
  - Direct manipulation . . . . . 246
  - Comparison between communication styles . . . . . 247
  - Summary . . . . . 248
  
- Chapter 13: Lexical and Syntactical Aspects of Communication . . . . 249**
  - Denotation . . . . . 249
  - Connotation . . . . . 252
  - The syntactical aspects of communication. . . . . 252
  - Summary . . . . . 255
  
- Chapter 14: Physical Aspects of Communication . . . . . 256**
  - Response time and computer breakdown . . . . . 256
  - Quality of visual output . . . . . 258
    - Flicker. . . . . 258
    - Positive or negative display mode . . . . . 258
    - Resolution and addressability . . . . . 259
    - Colour. . . . . 259
  - Quality of auditory output . . . . . 260
  - Output media—conclusions. . . . . 261
  - Input Devices. . . . . 261
    - Keyboards . . . . . 261

|   |            |
|---|------------|
| Pointing devices . . . . .  | 263        |
| Direct manipulation devices . . . . .                             | 264        |
| Speech input . . . . .  | 265        |
| Summary . . . . .   | 266        |
| <b>Chapter 15: Metacommunication . . . . .</b>                    | <b>267</b> |
| Metacommunication—definition and motivation . . . . .             | 267        |
| Metacommunication inside and outside the system . . . . .         | 268        |
| When should metacommunication occur? . . . . .                    | 268        |
| Metacommunication at different communication levels . . . . .     | 268        |
| How can current metacommunication be improved? . . . . .          | 272        |
| Summary . . . . .   | 274        |
| <b>Part IV. The Effects Perspective . . . . .</b>                 | <b>275</b> |
| <b>Introduction . . . . .</b>                                     | <b>277</b> |
| <b>Chapter 16: Effects on Cognitive Performance . . . . .</b>     | <b>279</b> |
| Introduction . . . . .  | 279        |
| Computer language and its effects on everyday language . . . . .  | 280        |
| “Computer culture” effects on language . . . . .                  | 282        |
| Computer intervention effects on problem solving . . . . .        | 283        |
| Computer programming effects on problem solving . . . . .         | 285        |
| Conclusion about the effects of programming on thinking . . . . . | 292        |
| Summary . . . . .   | 292        |
| <b>Chapter 17: Conceptual Effects . . . . .</b>                   | <b>294</b> |
| Consequences of the rule-based model . . . . .                    | 294        |
| Computational explanation in science . . . . .                    | 297        |
| Computational theories—the requirements . . . . .                 | 297        |
| Computational practice in everyday life . . . . .                 | 299        |
| Construction games . . . . .                                      | 300        |
| Computers challenge our conception of ourselves . . . . .         | 300        |
| Conclusion . . . . .  | 304        |
