

Reynolds's Reinforced Concrete Designer's Handbook

ELEVENTH EDITION

Charles E. Reynolds

BSc (Eng), CEng, FICE

James C. Steedman

BA, CEng, MICE, MStructE

and

Anthony J. Threlfall

BEng, DIC

Taylor & Francis

Taylor & Francis Group

LONDON AND NEW YORK

Contents

List of tables	vi	19 Miscellaneous structures and details	206
Preface to the eleventh edition	ix	20 Elastic analysis of concrete sections	226
The authors	x		
Acknowledgements	xi	Part 3 – Design to British Codes	237
Symbols and abbreviations	xii	21 Design requirements and safety factors	239
		22 Properties of materials	245
Part 1 – General information	1	23 Durability and fire-resistance	249
1 Introduction	3	24 Bending and axial force	256
2 Design criteria, safety factors and loads	5	25 Shear and torsion	283
3 Material properties	14	26 Deflection and cracking	295
4 Structural analysis	28	27 Considerations affecting design details	312
5 Design of structural members	44	28 Miscellaneous members and details	322
6 Buildings, bridges and containment structures	54		
7 Foundations, ground slabs, retaining walls, culverts and subways		Part 4 – Design to European Codes	333
		29 Design requirements and safety factors	335
Part 2 – Loads, materials and structures	73	30 Properties of materials	338
8 Loads	75	31 Durability and fire-resistance	342
9 Pressures due to retained materials	86	32 Bending and axial force	345
10 Concrete and reinforcement	95	33 Shear and torsion	362
11 Cantilevers and single-span beams	105	34 Deflection and cracking	371
12 Continuous beams	111	35 Considerations affecting design details	381
13 Slabs	128	36 Foundations and earth-retaining walls	390
14 Framed structures	154	Appendix: Mathematical formulae and data	395
15 Shear wall structures	169		
16 Arches	175	References and further reading	397
17 Containment structures	183		
18 Foundations and retaining walls	195	Index	399
