# **Corrosion of Steel in Concrete**

**Prevention, Diagnosis, Repair**

**WILEY-  
VCH**

**WILEY-VCH Verlag GmbH & Co. KGaA**

# Contents

**Preface** V

**Foreword** IX

## **Part I**

### **Properties of Cementitious Materials** 1

#### **1 Cements and Cement Paste** 3

1.1 Cement Types and Hydration Reaction 3

1.2 Porosity and Transport Processes 5

1.2.1 Water/cement Ratio and Curing 6

1.2.2 Porosity, Permeability and Percolation 8

1.3 Blended Cements 10

1.3.1 Pozzolanic Materials 10

1.3.2 Ground Granulated Blast Furnace Slag 12

1.3.3 Properties of Blended Cements 12

1.4 Common Cements 14

1.5 Other Types of Cement 17

#### **2 Transport Processes in Concrete** 21

2.1 Composition of Pore Solution and Water Content 22

2.1.1 Composition of Pore Solution 23

2.1.2 Water in Concrete 23

2.1.3 Water Content and Transport Processes 26

2.2 Diffusion 28

2.2.1 Stationary Diffusion 28

2.2.2 Non-stationary Diffusion 29

2.2.3 Diffusion and Binding 32

2.3 Capillary Suction 32

2.4 Permeation 34

2.4.1 Water Permeability Coefficient 34

2.4.2 Gas Permeability Coefficient 35

2.5 Migration 36

2.5.1	Ion Transport in Solution	36
2.5.2	Ion Transport in Concrete	37
2.5.3	Resistivity of Concrete	38
2.6	Mechanisms and Significant Parameters	39
<b>3</b>	<b>Degradation of Concrete</b>	<b>49</b>
3.1	Freeze-thaw Attack	50
3.1.1	Mechanism	51
3.1.2	Factors Influencing Frost Resistance	52
3.1.3	Air-entrained Concrete	53
3.2	Attack by Acids and Pure Water	55
3.2.1	Acid Attack	55
3.2.2	Biogenic Sulfuric Acid Attack	56
3.2.3	Attack by Pure Water	57
3.2.4	Ammonium Attack	58
3.3	Sulfate Attack	58
3.3.1	Mechanism	58
3.3.2	Protection	59
3.4	Alkali Silica Reaction	60
3.4.1	Alkali Content in Cement and Pore Solution	60
3.4.2	Alkali Silica Reaction (ASR)	62
3.5	Attack by Seawater	64
	<b>Part II</b>	
	<b>Mechanisms of Corrosion</b>	<b>69</b>
<b>4</b>	<b>General Aspects</b>	<b>71</b>
4.1	Initiation and Propagation of Corrosion	71
4.1.1	Initiation Phase	71
4.1.2	Propagation Phase	72
4.2	Corrosion Rate	73
4.3	Consequences	74
4.4	Behaviour of Other Metals	76
<b>5</b>	<b>Carbonation-induced Corrosion</b>	<b>79</b>
5.1	Carbonation of Concrete	79
5.1.1	Penetration of Carbonation	80
5.1.2	Factors that Influence the Carbonation Rate	80
5.2	Initiation Time	85
5.2.1	Parabolic Formula	85
5.2.2	Other Formulas	86
5.3	Corrosion Rate	86
5.3.1	Carbonated and Chloride-contaminated Concrete	89

<b>6</b>	<b>Chloride-induced Corrosion</b>	<b>91</b>
6.1	Pitting Corrosion	92
6.2	Corrosion Initiation	93
6.2.1	Chloride Threshold	94
6.2.2	Chloride Penetration	98
6.2.3	Surface Content ( $C_s$ )	100
6.2.4	Apparent Diffusion Coefficient	102
6.3	Corrosion Rate	104
<b>7</b>	<b>Electrochemical Aspects</b>	<b>109</b>
7.1	Electrochemical Mechanism of Corrosion	109
7.2	Non-carbonated Concrete without Chlorides	112
7.2.1	Anodic Polarization Curve	112
7.2.2	Cathodic Polarization Curve	114
7.2.3	Corrosion Conditions	115
7.3	Carbonated Concrete	116
7.4	Concrete Containing Chlorides	118
7.4.1	Corrosion Initiation and Pitting Potential	118
7.4.2	Propagation	119
7.4.3	Repassivation	120
7.5	Structures Cathodically or Anodically Polarized	121
<b>8</b>	<b>Macrocells</b>	<b>125</b>
8.1	Structures Exposed to the Atmosphere	125
8.2	Buried Structures and Immersed Structures	127
8.3	Electrochemical Aspects	130
<b>9</b>	<b>Stray-current-induced Corrosion</b>	<b>135</b>
9.1	DC Stray Current	136
9.1.1	Alkaline and Chloride-free Concrete	136
9.1.2	Passive Steel in Chloride-contaminated Concrete	141
9.1.3	Corroding Steel	142
9.2	AC Stray Current	142
9.3	High-strength Steel	143
9.4	Inspection	144
9.5	Protection from Stray Current	145
<b>10</b>	<b>Hydrogen-induced Stress-corrosion Cracking</b>	<b>147</b>
10.1	Stress-corrosion Cracking (SCC)	147
10.2	Failure under Service of High-strength Steel	149
10.2.1	Crack Initiation	149
10.2.2	Crack Propagation	150
10.2.3	Fast Propagation	151
10.2.4	Critical Conditions	152
10.2.5	Fracture Surface	153

10.3	Metallurgical, Mechanical and Load Conditions	155
10.3.1	Susceptibility of Steel to HI-SCC	156
10.4	Environmental Conditions	157
10.5	Hydrogen Generated During Operation	158
10.6	Hydrogen Generated before Ducts are Filled	161

### Part III

#### Prevention 163

<b>11</b>	<b>Design for Durability</b>	<b>165</b>
11.1	Conditions of Aggressiveness	166
11.2	Concrete Quality	168
11.3	Cracks	172
11.4	Thickness of the Concrete Cover	174
11.5	Service-life Modelling and Refined Methods for Service-life Design	175
11.5.1	Evaluation of the Service Life with Respect to Carbonation	177
11.5.2	Evaluation of the Service Life with Respect to Chloride Penetration	177
11.6	Performance-based Service-life Design According to <i>DuraCrete</i>	178
11.6.1	Initiation Time for Carbonation-induced Corrosion	181
11.6.2	Propagation Time for Carbonation- (and Chloride)-induced Corrosion	181
11.6.3	Initiation Time for Marine Structures	182
11.6.4	Design Equation for Chloride-induced Corrosion Initiation	183
11.6.5	Tabulated Values	185
11.6.6	Safety Factors	186
11.6.7	Calculation and Results	186
11.6.8	Concluding Remarks	187
11.7	Additional Protection Measures	187
11.7.1	Preventative Measures in the Presence of Chlorides	189
<b>12</b>	<b>Concrete Technology for Corrosion Prevention</b>	<b>193</b>
12.1	Constituents of Concrete	193
12.1.1	Cement	193
12.1.2	Aggregates	194
12.1.3	Mixing Water	195
12.1.4	Admixtures	195
12.2	Properties of Fresh and Hardened Concrete	196
12.2.1	Workability	196
12.2.2	Strength	198
12.2.3	Deformation	201
12.2.4	Shrinkage and Cracking	201
12.3	Mix Design	202
12.4	Concrete Manufacturing	204
12.4.1	Mixing, Handling, Placement, and Compaction	205
12.4.2	Curing	206
12.5	Design Details	208

- 12.6 Concrete with Special Properties 210
  - 12.6.1 Concrete with Mineral Additions 210
  - 12.6.2 High-performance Concrete (HPC) 212
  - 12.6.3 Self-compacting Concrete (SCC) 212
  
- 13 Corrosion Inhibitors 217**
  - 13.1 Mechanism of Corrosion Inhibitors 218
  - 13.2 Mode of Action of Corrosion Inhibitors 218
  - 13.3 Corrosion Inhibitors to Prevent or Delay Corrosion Initiation 219
  - 13.4 Corrosion Inhibitors to Reduce the Propagation Rate of Corrosion 223
  - 13.5 Transport of the Inhibitor into Mortar or Concrete 224
  - 13.6 Field Tests and Experience with Corrosion Inhibitors 226
  - 13.7 Critical Evaluation of Corrosion Inhibitors 227
  - 13.8 Effectiveness of Corrosion Inhibitors 228
  
- 14 Surface Treatments 231**
  - 14.1 General Remarks 231
  - 14.2 Organic Coatings 233
    - 14.2.1 Properties and Testing 234
    - 14.2.2 Performance 236
  - 14.3 Hydrophobic Treatment 237
    - 14.3.1 Properties and Testing 239
    - 14.3.2 Performance 240
  - 14.4 Treatments that Block Pores 241
  - 14.5 Cementitious Coatings and Layers 242
  - 14.6 Concluding Remarks on Effectiveness and Durability of Surface Treatments 243
  
- 15 Corrosion-resistant Reinforcement 249**
  - 15.1 Steels for Reinforced and Prestressed Concrete 249
    - 15.1.1 Reinforcing Bars 249
    - 15.1.2 Prestressing Steel 251
    - 15.1.3 Corrosion Behaviour 252
  - 15.2 Stainless-Steel Rebars 253
    - 15.2.1 Properties of Stainless-Steel Rebars 253
    - 15.2.2 Corrosion Resistance 255
    - 15.2.3 Coupling with Carbon Steel 258
    - 15.2.4 Applications and Cost 260
  - 15.3 Galvanized-Steel Rebars 261
    - 15.3.1 Properties of Galvanized-steel bars 261
    - 15.3.2 Corrosion Resistance 263
  - 15.4 Epoxy-coated Rebars 264
    - 15.4.1 Properties of the Coating 265
    - 15.4.2 Corrosion Resistance 265

- 15.4.3 Practical Aspects 266
- 15.4.4 Effectiveness 266

**Part IV**

**Diagnosis 271**

- 16 Inspection and Condition Assessment 273**
  - 16.1 Visual Inspection and Cover Depth 273
  - 16.2 Electrochemical Inspection Techniques 276
    - 16.2.1 Half-cell Potential Mapping 277
    - 16.2.2 Resistivity Measurements 283
    - 16.2.3 Corrosion Rate 287
  - 16.3 Chemical Analysis of Concrete 291
    - 16.3.1 Carbonation Depth 291
    - 16.3.2 Chloride Determination 292

**17 Monitoring 299**

- 17.1 Introduction 299
- 17.2 Monitoring with Non-electrochemical Sensors 300
- 17.3 Monitoring with Electrochemical Sensors 305
- 17.4 Critical Factors 307
- 17.5 On the Way to “Smart Structures” 308

**Part V**

**Repair 313**

**18 Principles and Methods for Repair 315**

- 18.1 Repair Options 315
- 18.2 Basic Repair Principles 319
- 18.3 Repair Methods for Carbonated Structures 320
  - 18.3.1 Repassivation 320
  - 18.3.2 Reduction of the Moisture Content of the Concrete 323
  - 18.3.3 Coating of the Reinforcement 323
- 18.4 Repair Methods for Chloride-contaminated Structures 324
  - 18.4.1 Repassivation 324
  - 18.4.2 Cathodic Protection 326
  - 18.4.3 Other Methods 327

**19 Conventional Repair 329**

- 19.1 Assessment of the Condition of the Structure 329
- 19.2 Removal of Concrete 330
  - 19.2.1 Definition of Concrete to be Removed 330
  - 19.2.2 Techniques for Concrete Removal 335
  - 19.2.3 Surface Preparation 336
- 19.3 Preparation of Reinforcement 336

19.4	Application of Repair Material	337
19.4.1	Requirements	337
19.4.2	Repair Materials	338
19.4.3	Specifications and Tests	339
19.5	Additional Protection	340
19.6	Strengthening	341
<b>20</b>	<b>Electrochemical Techniques</b>	<b>345</b>
20.1	Development of the Techniques	346
20.1.1	Cathodic Protection	346
20.1.2	Cathodic Prevention	347
20.1.3	Electrochemical Chloride Removal	348
20.1.4	Electrochemical Realkalization	349
20.2	Effects of the Circulation of Current	349
20.2.1	Beneficial Effects	349
20.2.2	Side Effects	350
20.2.3	How Various Techniques Work	352
20.3	Cathodic Protection and Cathodic Prevention	354
20.3.1	Cathodic Protection of Steel in Chloride-contaminated Concrete	354
20.3.2	Cathodic Prevention	356
20.3.4	Cathodic Protection in Carbonated Concrete	357
20.3.5	Throwing Power	358
20.3.6	The Anode System	359
20.3.7	Practical Aspects	360
20.4	Electrochemical Chloride Extraction and Realkalisation	363
20.4.1	Electrochemical Chloride Extraction	364
20.4.2	Electrochemical Realkalisation	369
20.4.3	Practical Aspects	373
	<b>Index</b>	<b>381</b>
