

Pattern Recognition with Fuzzy Objective Function Algorithms

James C. Bezdek

*Utah State University
Logan, Utah*

PLENUM PRESS • NEW YORK AND LONDON

Contents

Notation	xiii
1. Models for Pattern Recognition	1
S1 Pattern Recognition	1
S2 Some Notes on Mathematical Models	5
S3 Uncertainty	7
2. Partitions and Relations	15
S4 The Algebra of Fuzzy Sets	15
S5 Fuzzy Partition Spaces	23
S6 Properties of Fuzzy Partition Spaces	28
S7 Fuzzy Relations	39
3. Objective Function Clustering	43
S8 Cluster Analysis: An Overview	43
S9 Density Functionals	48
S10 Likelihood Functionals: Congenital Heart Disease	60
S11 Least-Squares Functionals: Fuzzy c -Means	65
S12 Descent and Convergence of Fuzzy c -Means	80
S13 Feature Selection for Binary Data: Important Medical Symptoms	86
4. Cluster Validity	95
S14 Cluster Validity: An Overview	95
S15 The Partition Coefficient: Numerical Taxonomy	99
S16 Classification Entropy	109
S17 The Proportion Exponent: Numerical Taxonomy Revisited	119
S18 Normalization and Standardization of Validity Functionals	126
S19 The Separation Coefficient: Star-Tracker Systems	137
S20 Separation Indices and Fuzzy c -Means	145
5. Modified Objective Function Algorithms	155
S21 Affinity Decomposition: An Induced Fuzzy Partitioning Approach	155
S22 Shape Descriptions with Fuzzy Covariance Matrices	165

S23 The Fuzzy c -Varieties Clustering Algorithms	174
S24 Convex Combinations: Fuzzy c -Elliptotypes	192
6. Selected Applications in Classifier Design	203
S25 An Overview of Classifier Design: Bayesian Classifiers	203
S26 A Heuristic Approach to Parametric Estimation: Bayesian Classifiers for Mixed Normal Distributions	216
S27 Nearest Prototype Classifiers: Diagnosis of Stomach Disease	228
S28 Fuzzy Classification with Nearest Memberships	235
