Preface xi

Chapter 1 Prologue 1
1 Introduction 1
2 Guide for the reader 4

Chapter 2 Perceptions and reality: the genesis of the Sherman act 10
1 Introduction 10
2 Reality: the legacy from the past 13
3 Perceptions about the economy after the end of the Civil War 18
4 State of the U.S. economy during the last third of the nineteenth century 25

Chapter 3 Competition, cooperation, and efficiency 48
1 Introduction 48
2 Competition in pure exchange 49
3 Description of the example 54
4 Analysis of competition for the example 62
5 Conclusion 73

Chapter 4 Stable coalitions 74
Part 1 Stable coalitions whose returns are convex functions 74
1 Introduction 74
2 Definitions and basic properties 78
3 Extreme coalitions 83
4 Properties of the imputations for a superadditive, strictly convex function 87
5 Totally kind functions 94
6 Application to semiprivate goods 99
Part 2 Stable coalitions whose returns are concave functions 101

1 Introduction 101
2 Some facts about concave characteristic functions 108
3 Status of the core for concave f 110
4 Status of the core for plants of optimal size 117

Part 3 Stable coalitions for private and semiprivate goods 122
1 Introduction 122
2 The principal result 124
3 The invisible-hand theorem 129
4 Relations between the neoclassical and core theories 135

Chapter 5 Equilibrium with decreasing average cost: an application of the theory of the core illustrated by production and exchange among spatially separated markets 144
1 Introduction 144
2 Description of the economic model 146
3 The linear programming problem 154
4 The optimal assignment 157
5 Status of the core 161
6 An algorithm for finding the optimal assignment 166
7 Some numerical examples for illustrating the theoretical results 169
8 Prices paid and prices received 176
9 Conclusions 181
10 Appendix: multiproduct plants 182

Chapter 6 A theory of self-enforcing agreements 187
1 Introduction 187
2 Long-term versus short-term contracts 193
3 A principal-agent problem: Prizzi's honor 199
4 Research and development: a free-loader problem 205
5 The Prisoners' Dilemma 210
6 Summary 218

Chapter 7 Some new results on duopoly applied to theories of Cournot, Bertrand, and Edgeworth 220
1 Introduction 220
2 Assumptions of the model 221
3 Noncooperative equilibria under Assumption 2, Bertrand–Edgeworth 224
4 Noncooperative equilibria under Assumption 1, Cournot 231
5 Additional tests of the rival theories 237

Chapter 8 Rivalry by means of innovation 242
Part 1 Some empirical results 242
1 Introduction 242
2 Innovation when research results are private 245
3 Some empirical results relating merger intensities to growth rates, 1895–1930, and merger rates to measures of innovation, 1951–9 250
4 Empirical evidence from cross sections of manufacturing industries over time, 1947–72 254
Part 2 A theory of innovation and its effects 262
1 Introduction 262
2 Optimal sequential research from a known distribution 264
3 *N* Simultaneous independent research programs 270
4 The unified theory 277
5 Predictions 285
6 Technical appendix 287
