Contents

Preface	vii
Introduction	1
References	2
Chapter 1. Generalities	3
1.1 History	3
1.2 Fundamental Principles	4
Bibliography	5
Chapter 2. Control Systems	6
2.1 Work Cycles	6
Point-to-point working	6
Straight-cut milling	7
Contouring	8
2.2 Transmission of Instructions	8
Nature of instructions	8
Semiautomatic operation	9
Automatic operation	9
Punched cards	10
Punched tapes	10
Magnetic tapes	10
Mixed operations	11
2.3 Sensors	11
Relationship with components	11
Types of transducers	13
Numerical transducers	13
Numerical encoders	13
Pulse generators	16
Analogue transducers	18
Mixed transducers	19

2.4 Modes of Operation	19
Point-to-point working	19
'Yes or no' operation	19
Velocity-step operation	21
Controlled-velocity operation	23
Pulse operation	23
Positioning by blocks	24
Straight-line milling	24
Adjustment of coordinates	24
Operation	25
Contouring	25
Basic principle	25
Types of control	26
Methods of definition	29
Closely spaced definition	29
Medium-spaced definition	29
Widely spaced definition	30
General definition	32
2.5 Motors	32
Linear motors	32
Rotary motors	32
Motors with non-controllable speed	32
Speed-controlled motors	33
Brush motors	34
Stepping motors	35
Hydraulic motors	39
References	40
Chapter 3. Field of Application	43
3.1 Profitability	43
Increase in hourly cost	43
Direct economies	43
Machining time	43
Tooling	44
Manpower	45
Shift working	46
Rejects	46
Indirect economies	47
Jig boring	47
Counterboring	47
Interchangeability	48
Handling and transport	48

Lead times and work in hand	48
Stocks	48
Overheads	49
Archives and administration work	49
3.2 Technical Possibilities	49
Point-to-point and straight-line operation	50
Drilling, tapping, reaming and milling	50
Punching	50
Shearing	51
Riveting and spot welding	51
Bending	51
Wiring and assembly	52
Balancing	54
Inspection	54
Contouring	56
Turning	56
Flame cutting	56
Welding	57
Grinding	57
Cylindrical grinding	57
Grinding of camshafts	57
Grinding of arbitrary surfaces	59
Drafting and design	59
Winding	60
Milling	61
Two-dimensional milling	61
Stepped two-dimensional milling	61
Three-dimensional milling	62
3.3 Economic Limits	62
Drilling and tapping	62
Boring	63
Jig boring	63
Turning	64
Grinding	64
Drafting and design	65
Milling	66
References	69
Chapter 4. Architecture of the Principal Types of Machine Tools	71
4.1 Drilling Machines	71
Column drilling machines	71
Modification of radial drilling machines	72

Transverse-beam drilling machines	75
Moving-portal drilling machines	76
4.2 Boring Machines	77
4.3 Lathes	77
4.4 Grinders	78
Centre grinders	78
Camshaft grinders	79
Other grinding machines	80
4.5 Plotting and Drafting Machines	80
4.6 Milling Machines	82
Conventional milling machines	82
Portal milling machines	82
4.7 Multipurpose Machines	82
4.8 Accessories	86
Turret tool holders	86
Tool magazines	87
Tool holders	91
Presetting of tools	92
Workpiece changers	92
Control consoles	94
References	94
Chapter 5. Job Preparation	96
5.1 Standardization	96
5.2 Point-to-point Programs	97
Geometry of the tool	97
Breaking down of operations	98
Definition of the location of axes	98
Definition of a point	99
Definition of a straight line	99
Definition of a circle	99
Technological data	100
5.3 Contouring Programs	101
Plane curves	102
Mathematical curves	102
Non-mathematical curves	103
Definition of a single curve	103
Piecewise definition	104
Arcs with predetermined tangents	105
Determination of the tangents	105
Curves	106
Arcs of circles	107

Parabolic arcs	109
Cubic arcs	109
Segments determined by recurrence	110
Circular arcs	110
Parabolic or cubic arcs	111
First-order continuity	111
Second-order continuity	112
Parametric curves	113
Ferguson's curves	113
UNISURF curves	115
Principle	115
Properties of the functions f	116
Form of the functions f	117
Determination of the vectors a_i	122
Hodographs	128
Segmentation of curves	133
Modification of the number of sides of a polygon	135
Descriptive operations	136
Points	137
Translation	137
Performing a translation	137
Rotation	137
Performing a rotation	137
Conic projection	139
Laws of cams and followers	141
Cams	141
Masters	144
Case 1: Landis-type machines	144
Case 2: Norton-type machines	146
Centre of the grinding wheel	147
Centre of the roller	147
Masters	148
Twisted curves	148
Mathematical curves	148
Non-mathematical curves	149
Definition of a single curve	149
Piecewise definition	149
Parametric curves	149
Surfaces	150
Mathematical surfaces	150
Non-mathematical surfaces	151
Definition of a single surface	151
Piecewise definition	152

The Inaba method	152
Isolated patch	153
Patch tangent to a given patch	154
Patch lying between two given patches	157
First case	157
Second case	157
Definition by interpolating functions	161
S. A. Coons method	161
First-order continuity	161
Second-order continuity	165
Boundary curves	166
The A.E.G. method	166
Biparametric definitions	167
J. Ferguson's method	167
Conjugate generatrices	168
Continuity of curves and surfaces	169
The UNISURF method	170
Principle	170
Variable generatrix	171
Variable point	171
Conjugate generatrices	172
Transposed curves	173
Continuity	175
Continuity of two curves	175
Tangency	175
Osculation	176
Continuity of biparametric surfaces	177
Examples of the determination of the characteristic polygon of Δ'	179
First case	179
Second case	180
Second-order continuity	181
Continuity of transposed curves	182
Special cases	183
The role of the vertices of a mesh	184
Generalization	185
Automatic definition of a surface	185
Triparametric coordinates	186
Multiparametric coordinates	188
Descriptive operations and transposition	188
The trajectory of the point of contact of a tool	188
Correction for the cutter radius	190
Two-dimensional contouring	190

Three-dimensional contouring	192
Spherical tools	192
Spindle with fixed orientation	192
Variable-orientation spindle	194
Toroidal tool	196
References	197
Chapter 6. Exploitation of Machines	199
6.1 Generalities	199
6.2 Conception of the Product	199
6.3 Dimensioning of Drawings	201
6.4 Work Preparation	202
Process charts	202
The program	202
The general program	203
The post processor	204
Code	204
Coordinates	204
Orientation of the axes	204
Shifting of the origin	205
Format	205
Technological data	205
Length of tools	205
Capacity of the machine	205
Tool changing	205
Work cycles	206
Overshoot	206
Other tasks	207
Checking	207
Program preparation	207
Data typing	207
Double punching	208
Successive double punching	208
Plotting	208
Test piece	208
6.5 Execution of the Job	209
6.6 Archives	209
References	210
Chapter 7. Conclusion	211
References	220

Appendix 1. Spline Curves	222
Physical splines	222
Mathematical splines	222
Spline computation	224
Use of splines	227
References	227
Appendix 2. Coons Surfaces	228
Patch defined by boundary curves	228
Patch with defined boundary curves and slopes	230
Higher-order boundary conditions	232
The bicubic patch	233
Equivalence with other patch definitions	234
Twist vectors	235
Index	237
