The Sea Floor

An Introduction to Marine Geology

Second, Revised and Updated Edition

With 209 Figures and 9 Tables

Springer-Verlag

Berlin Heidelberg New York

London Paris Tokyo

Hong Kong Barcelona

Budapest

Contents

Introduction	1
1 Origin and Morphology of Ocean Basins	15
1.1 The Depth of the Sea	15
1.2 Endogenic Processes	16
1.3 Exogenic Processes.....	20
1.4 Morphology of the Mid-Ocean Ridge	21
1.5 Morphology of the Trenches	25
1.6 Fracture Zones and Plate Tectonics.....	28
1.7 Seamounts, Island Chains, and Hot Spots.....	29
1.8 Evidence for Sea-Floor Spreading: the Magnetic Stripes...	32
1.9 Open Tasks and Questions.....	36
2 Origin and Morphology of Ocean Margins	41
2.1 General Features of Continental Margins	41
2.2 Margins Are Sediment Traps.....	44
2.3 Atlantic-Type (= Passive) Margins	45
2.4 Unsolved Questions in the Study of Passive Margins	51
2.5 Pacific-Type (= Active) Margins.....	51
2.6 Shear Margins and Complex Margins	54
2.7 The Shelf Areas	55
2.8 The Shelf Break	56
2.9 Continental Slope and Continental Rise	57
2.10 Submarine Canyons	60
2.11 Deep-Sea Fans	66
3 Sources and Composition of Marine Sediments.....	69
3.1 The Sediment Cycle.....	69
3.2 Sources of Sediment.....	69
3.2.1 River Input.....	69
3.2.2 Glacier Input	71
3.2.3 Input from Wind	71

3.2.4	Volcanic Input	72
3.3	Sediments and Seawater Composition	73
3.3.1	Acid-Base Titration	73
3.3.2	Interstitial Water and Diagenesis	75
3.3.3	Residence Time	77
3.4	Major Sediment Types	77
3.5	Lithogenous Sediments	78
3.5.1	Grain Size	78
3.5.2	Sand	80
3.5.3	Silt-sized Sediment	80
3.5.4	Clay-sized Sediment	82
3.6	Biogenous Sediments	82
3.6.1	Types of Components	82
3.6.2	Benthic Organisms	83
3.6.3	Planktonic Organisms	84
3.7	Nonskeletal Carbonates	85
3.7.1	Carbonate Saturation	85
3.7.2	The Bahamas	86
3.7.3	Dolomite	88
3.8	Hydrogenous Sediments	89
3.8.1	Marine Evaporites	89
3.8.2	Phosphorites	90
3.8.3	Iron Compounds	90
3.9	Sedimentation Rates	92
4	Effects of Waves and Currents	97
4.1	Sediment Transport	98
4.1.1	Role of Grain Size	98
4.1.2	Role of Velocity	99
4.1.3	Role of Events	101
4.2	Effects of Waves	102
4.2.1	Waves and Offshore Sediment	102
4.2.2	Beach Processes	103
4.3	Effects of Currents	111
4.3.1	Surface Currents	111
4.3.2	Current Markers	114
4.3.3	Upwelling	118
4.3.4	Deep Ocean Currents and Benthic Storms	120
4.3.5	Exchange Currents	124
4.3.6	Turbidity Currents	125
5	Sea Level Processes and Effects of Sea Level Change	127
5.1	Importance of Sea Level Positions	127

5.2	Sea Level Processes and Indicators	129
5.2.1	Wave Action.	129
5.2.2	Tides and Storm Action: the Intertidal Zone	132
5.2.3	Photosynthesis	134
5.3	Coastal Morphology and the Recent Rise in Sea Level	135
5.3.1	General Effects of Recent Sea Level Rise	135
5.3.2	River Mouths	138
5.3.3	Lagoons and Barriers.	140
5.3.4	Mangrove Swamps.	141
5.4	Ice-Driven Sea Level Fluctuations.	143
5.4.1	The Würm Low Stand.	143
5.4.2	Pleistocene Fluctuations	144
5.4.3	Effects on Reef Growth.	145
5.5	Tectonically Driven Sea Level Fluctuations	147
5.5.1	Sea Level and Sediment Bodies	147
5.5.2	Reconstruction of Sea Level Changes	147
5.5.3	The Causes of Change.	149
5.5.4	Geologic Aspects.	151
5.6	Sea Level and the Fate of Venice	152
5.6.1	Venice Is Sinking.	152
5.6.2	What are the Causes for the Subsidence?.	152
5.6.3	What Can Be Done About It?.	155
6	Productivity and Benthic Organisms – Distribution, Activity, and Environmental Reconstruction	157
6.1	The Ocean Habitat	157
6.1.1	Diversity of Organisms	157
6.1.2	Productivity and Supply of Organic Matter	157
6.1.3	Sunlight and Nutrients	161
6.1.4	Salinity	162
6.1.5	Temperatures	162
6.1.6	Oxygen	165
6.2	Benthic Life	166
6.2.1	Types	166
6.2.2	Food and Substrate	167
6.3	Organisms and Rocky Substrate	168
6.4	Sandy Substrate	171
6.5	Muddy Bottom Substrate	172
6.6	Trails and Burrows	175
6.6.1	Trace Fossils.	175
6.6.2	Lebensspuren	176
6.6.3	Preservation	177
6.7	Bioturbation	177
6.7.1	Effects of Mixing.	177

6.7.2	Mixing Model	179
6.8	Limits of Paleocologic Reconstruction	180
6.9	“Hot Vent” and “Cold Seep” Communities.....	182
7	Imprint of Climatic Zonation on Marine Sediments.....	185
7.1	Overall Zonation and Main Factors.....	185
7.1.1	The Zones.....	185
7.1.2	Temperature and Fertility	185
7.2	Biogeographic Climate Indicators	188
7.2.1	Paleotemperature from Transfer Methods	188
7.2.2	Transfer Equations.....	189
7.2.3	Application of Transfer Methods: Climatic Transgression	190
7.2.4	Limitations of the Transfer Method	191
7.3	Diversity and Shell Chemistry as Climatic Indicators	191
7.3.1	Diversity Gradients	191
7.3.2	Oxygen Isotopes	192
7.3.3	Carbon Isotopes.....	193
7.3.4	Other Chemical Markers	194
7.4	Coral Reefs, Markers of Tropical Climate	194
7.4.1	Global Distribution	194
7.4.2	Reef Building.....	195
7.4.3	Atolls	196
7.5	Geologic Climate Indicators	199
7.5.1	Chemical Indicators.....	199
7.5.2	Physical Geologic Indicators.....	199
7.6	Climatic Clues from Restricted Seas.....	201
7.6.1	Salinity Distributions and Exchange Patterns.....	201
7.6.2	The Baltic As Humid Model of a Marginal Sea ...	203
7.6.3	Conditions of Stagnation	205
7.6.4	The Persian/Arabian Gulf As Arid Model of a Marginal Sea.....	206
7.6.5	Application to Large Ocean Basins	207
7.7	Global Change: The Problem of Detection.....	208
7.7.1	An Unusual Decade	208
7.7.2	Santa Barbara Basin.....	209
7.7.3	El Niño.....	210
7.7.4	The Coral Record.....	211
7.7.5	Global Change: The Role of Marine Geology	211
8	Deep-Sea Sediments – Patterns, Processes, and Stratigraphic Methods	215
8.1	Background.....	215

8.2	Inventory and Overview	215
8.2.1	Sediment Types and Patterns	215
8.2.2	Biogenous Sediments Dominate	216
8.2.3	Sedimentation Rates	217
8.2.4	Thickness of Deep-Sea Sediments	219
8.3	The Pelagic Rain	220
8.3.1	Importance of Fecal Transport	220
8.3.2	Flux of Organic Matter	220
8.3.3	Seasonality of Flux	220
8.4	“Red Clay” and Clay Minerals	222
8.4.1	Origin of “Red Clay”: the Questions	222
8.4.2	Composition of “Red Clay”	222
8.4.3	Distribution of Clay Minerals	224
8.5	Calcareous Ooze	225
8.5.1	Depth Distribution	225
8.5.2	Dissolution Patterns in the Deep Sea	226
8.5.3	Peterson’s Level and the Lysocline	226
8.5.4	Dissolution Patterns near Continents	228
8.5.5	Why is there a CCD?	229
8.5.6	A Global Experiment	229
8.6	Siliceous Ooze	231
8.6.1	Composition and Distribution	231
8.6.2	Controlling Factors	231
8.6.3	Geochemical Implications	233
8.6.4	Deep-Sea Cherts	234
8.7	Stratigraphy and Dating	236
8.7.1	General Considerations	236
8.7.2	Aspects of Biostratigraphy	236
8.7.3	Magnetostratigraphy	238
8.7.4	Chemostratigraphy	239
8.7.5	Cyclostratigraphy	240
9	Paleoceanography – The Deep-Sea Record	241
9.1	Background	241
9.2	The Ice Age Ocean	242
9.2.1	Why an Ice Age?	242
9.2.2	Conditions in a Cold Ocean	243
9.2.3	The 18 K Map	244
9.2.4	Pulsed Deglaciation	246
9.3	The Pleistocene Cycles	247
9.3.1	The Evidence	247
9.3.2	The Carbonate Cycles	247
9.3.3	The Faunal (and Floral) Cycles	249
9.3.4	Oxygen Isotope Cycles	249

9.3.5	Milankovitch Cycles and Dating.....	251
9.3.6	A Change in Tune	253
9.4	The Carbon Connection	253
9.4.1	A Major Discovery	253
9.4.2	Paleoproductivity	254
9.4.3	The Long-Range View.....	257
9.5	Tertiary Oceans: The Cooling Planet.....	257
9.5.1	Trends and Events: Oxygen Isotopes	257
9.5.2	The Great Partitioning	259
9.5.3	The Grand Asymmetries	260
9.5.4	The Onset of the (Northern) Ice Age	261
9.5.5	The Mid-Miocene Cooling Step	262
9.5.6	The End-of-Eocene Cooling	264
9.6	The Cretaceous/Tertiary Boundary	265
9.6.1	The Evidence for Sudden Extinction	265
9.6.2	The Causes of Extinction	265
9.7	Plate Stratigraphy and CCD Fluctuations	266
9.7.1	Backtracking and CCD Reconstruction	266
9.7.2	Atlantic and Pacific CCD Fluctuations.....	269
9.7.3	Possible Causes of CCD Fluctuations	270
9.8	Cretaceous Oceans: a Question of Oxygenation.....	270
9.8.1	A “Stagnant” Ocean?.....	270
9.8.2	Modern Analogs	271
9.8.3	Oxygen in a Warm Ocean.....	272
9.8.4	Milankovitch in the Cretaceous?.....	273
9.8.5	“Anoxic Events” and Volcanism.....	273
10	Resources from the Ocean Floor	277
10.1	Types of Resources.....	277
10.2	Petroleum Beneath the Sea Floor	277
10.2.1	Economic Background.....	277
10.2.2	Origin of Petroleum.....	279
10.2.3	Where Offshore Oil Is Found	280
10.2.4	Present Oil Exploration	283
10.3	Raw Materials from Shelves	285
10.3.1	Phosphorites	285
10.3.2	Shell Deposits	287
10.3.3	Placer Deposits.....	287
10.3.4	Sand and Gravel.....	288
10.4	Heavy Metals on the Deep-Sea Floor	289
10.4.1	Importance of Manganese Deposits	289
10.4.2	Nature of Manganese Deposits	291
10.4.3	Origin of Manganese Nodules.....	292
10.4.4	Ores from Spreading Axes	294
10.4.5	Red Sea Ore Deposits	297

10.5 Waste Disposal and Pollution.....	298
10.5.1 A Change in Pace	298
10.5.2 Sewage and Sludge	298
10.5.3 Oil Spills.....	300
10.5.4 Chronic Hydrocarbon Pollution	300
10.5.5 Radioactive Pollution.....	300
10.5.6 Assessment of Risk	302
Epilog.....	303
List of Books and Symposia	307
Appendix	315
A1 Conversion Between Common US Units and Metric Units.	315
A2 Topographic Statistics.....	316
A3 The Geologic Time Scale.....	317
A4 Common Minerals	318
A5 Grain Size Classification for Sediments	319
A6 Common Rock Types	320
A7 Geochemical Statistics	322
A8 Radio-Isotopes and Dating.....	323
A9 Systematic Overview for Major Groups of Common Marine Organisms Important in Sea floor Processes	327
Index of Names.....	333
Subject Index	339
