Mathematical Theory of Expanding and Contracting Economies

Oskar Morgenstern
New York University

Gerald L. Thompson
Carnegie-Mellon University

Technische Hochschule Darmstadt
Inv. Nr. F 99
Fachgebiet für Statistik und Ökonometrie

Lexington Books
D.C. Heath and Company
Lexington, Massachusetts
Toronto London

Contents

	Preface	xiii
Chapter 1	**Scope and Method of Investigation**	1
	1. Origin of the Expanding Economy Model	1
	2. Generalizations of the Model	4
	3. Method of Analysis	11
	4. Characteristics of Scientific Models	13
	5. Contraction and Compression	17
	6. Controlled Changes of Expansion	19
Chapter 2	**The KMT Closed Model**	21
	1. Introduction	21
	2. Axioms for the Model	23
	3. The von Neumann Assumption	25
	4. The KMT Assumptions	28
	5. Interpretation as a Game Theory Problem	28
	6. Existence of Economic Solutions	30
	7. Relaxation of the Free Goods and Inefficient Processes Restrictions	33
	8. The Introduction of Demand into the KMT Model	37
	Exercises	39
Chapter 3	**A Constructive Solution Method for the KMT Model**	41
	1. Introduction	41
	2. The First Method for Solving Fair Games	41
	3. The Second Method for Solving Fair Games	46
	4. The Third Method for Solving Fair Games	47
	5. Basic Results	50
	6. The Algorithm for Finding the Natural Factors	53
	7. Solution of an Example	54
	8. Historical Remarks Concerning Computational Methods and Proofs	55
	Exercises	56

Chapter 4	**The Open Expanding Economy Model**	59
	1. Axioms and Assumptions	59
	2. Existence of Solutions	67
	3. Properties of Solutions	73
	4. Further Examples	78
	5. Unequal Expansion and Interest Factors	80
	Exercises	83
Chapter 5	**Subeconomies and Aggregation**	85
	1. Subeconomies in the Closed Model	85
	2. Disconnected Subeconomies in the Closed Model	90
	3. The Introduction of Aggregation into the Closed Model	91
	4. Subeconomies in the Open Model	94
	Exercises	96
Chapter 6	**Private and Public Consumption and Savings in the Closed Model**	101
	1. Axioms and Assumptions	101
	2. Elementary Examples	103
	3. Existence Theorem	109
	4. More Complicated Examples	114
	5. Consumption of Excess Production and Excess Value	118
	6. The Public Sector Model	121
	Exercises	123
Chapter 7	**Private and Public Consumption and Savings in the Open Model**	125
	1. Consumption and Savings in the Open Model	125
	2. Consumption of Excess Production and Excess Value in the Open Model	127
	3. Examples	129
	Exercises	133
Chapter 8	**Stepwise Construction of Simple Economic Models**	135
	1. Introduction	135
	2. A Rural Economy	136

3. Technological Change 136
4. The Urban Model 138
5. Addition of Service and Luxury Industries 141
6. Addition of Disposal and Defense Industries 145
7. Addition of Defense Requirement 145
8. Comparisons Among the Solutions 146
Exercises 150

Chapter 9 Long-Term Planning Models 151

1. Introduction 151
2. Determination of the Control Variables for the Static Model 151
3. Example for the Static Model 153
4. The One-Period Dynamic Open Model 155
5. Numerical Example of the One-Period Open Dynamic Model 156
6. The *N*-Period Dynamic Open Expanding Economy Model 158
Exercises 160

Chapter 10 Stationarity, Contraction, and Compression of Economies 161

1. Introduction 161
2. Controlling Economic Growth 162
3. Stationary Economies 164
4. Contracting Economies 166
5. Compression of Economies 169
Exercises 171

Chapter 11 The World Model 173

1. Introduction 173
2. The World Expanding Economy Model 174
3. Existence of Natural World Transfer Prices 179
4. Examples 182
5. Effects on the World Model Solution of Changes in Control Variables 188
Exercises 190

Chapter 12 International Transactions 193

1. Trading Blocks 193
2. Classes of International Transactions 195

3. Causes of International Transactions 197
4. Benefits from International Trade 198
5. International Trade Theory and Expansion 200
6. Summary 200

Chapter 13 **Relationships Between von Neumann-KMT Models, Leontief Models, and Eigensystems** 203

1. Introduction 203
2. Solutions of Ordinary and Expanding Leontief Models 203
3. Solvability of the Leontief Input-Output Model 205
4. Consistent Aggregation in the Leontief Model 209
5. Expanding Models with Outside Demand 211
6. Generalized Eigensystems 212
7. Final Observations 214
Exercises 215

Chapter 14 **Conclusions and Outlook** 219

1. Review of New Concepts and Results Obtained 219
2. The Next Steps 220
3. Empirical Research Questions 221
4. Theoretical Research Questions 223

Appendix 1 **Matrix Games** 225

1. Definitions, Concepts, and Basic Results 225
2. Solving Economic Games 228
3. Theorem of the Alternative: Central Solutions 230
4. Continuity of the Economic Game Value 232

Appendex 2 **Linear Programming** 233

1. Definitions, Concepts, and Basic Results 233
2. Goal Programming 235
3. Complementary Slackness 237

Appendix 3 **"A Model of General Economic Equilibrium,"** *John von Neumann* 239

Appendix 4 **"Game-Theoretic Solution of an Economic Problem,"** *John G. Kemeny* 251
