Contents

Preface ix

I. The Linear Model and Instrumental Variables Estimators

Text	1
References	12
For Further Reading	12

II. Consistency

II.1. Limits	13
II.2. Almost Sure Convergence	16
II.3. Convergence in Probability	22
II.4. Convergence in r th Mean	27
References	28

III. Laws of Large Numbers

III.1. Independent Identically Distributed Observations	29
III.2. Independent Heterogeneously Distributed Observations	32
III.3. Dependent Identically Distributed Observations	36
III.4. Dependent Heterogeneously Distributed Observations	43
III.5. Martingale Difference Sequences	51
References	60

IV. Asymptotic Normality

IV.1. Convergence in Distribution	61
IV.2. Hypothesis Testing	69
IV.3. Asymptotic Efficiency	78
References	106

V. Central Limit Theory	
V.1. Independent Identically Distributed Observations	108
V.2. Independent Heterogeneously Distributed Observations	111
V.3. Dependent Identically Distributed Observations	115
V.4. Dependent Heterogeneously Distributed Observations	124
V.5. Martingale Difference Sequences	127
References	130
VI. Estimating Asymptotic Covariance Matrices	
VI.1. General Structure of \mathbf{V}_n	132
VI.2. Case 1: \mathbf{V}_n (Block) Diagonal	134
VI.3. Case 2: \mathbf{V}_n (Block) Band Diagonal	143
VI.4. Case 3: General Case	149
References	161
VII. Efficient Estimation with Estimated Error Covariance Matrices	
VII.1. General Results	163
VII.2. Case 1: Contemporaneous Covariance	164
VII.3. Case 2: Heteroskedasticity	171
VII.4. Case 3: Serial Correlation	178
References	185
VIII. Directions for Further Study	
VIII.1. Extensions of the Linear Model	186
VIII.2. Nonlinear Models	187
VIII.3. Other Estimation Techniques	188
VIII.4. Model Misspecification	189
References	189
Solutions Set	191
Index	225
