GEOPHYSICAL GEODESY

The Slow Deformations of the Earth

KURT LAMBECK
Research School of Earth Sciences
The Australian National University

CLARENDON PRESS · OXFORD
1988

CONTENTS

1 An overview 1

2 Geodetic concepts 5
2.1 Gravity and gravitational potential 6
2.2 Elements of potential theory 8
2.3 Coordinate reference frames 25
2.4 Precession and nutation 38
2.5 Rotational motion of a deformable body: general formulation 49

3 The geophysical setting 55
3.1 Radial earth structure 56
3.2 Lateral variations 73
3.3 The plate tectonics hypothesis 79
3.4 Some special loading problems 89

4 The hydrosphere and atmosphere 108
4.1 Sea-level 108
4.2 Late Pleistocene and Holocene sea-levels 117
4.3 Ocean tides 132
4.4 The atmosphere 152
4.5 The atmosphere in motion 157
4.6 Ground-water and the water balance 168

5 Terrestrial geodetic methods 171
5.1 Control surveys 172
5.2 Strain analysis 193
5.3 Gravity 203
5.4 Astronomical latitude, longitude, and time 215
5.5 Tilt and strain 225

6 Satellite methods 230
6.1 Orbital mechanics 231
6.2 Observing earth satellites 266
6.3 Estimating geodetic parameters 291
6.4 Estimating oceanographic parameters 325

7 Lunar methods **330**
7.1 Motion of the Moon 330
7.2 Lunar tides 352
7.3 Lunar laser ranging 355
7.4 Estimating selenodetic and geodetic constants 364

8 Radio interferometric methods **377**
8.1 Principles of long-baseline interferometry 379
8.2 Estimating geodetic and geophysical parameters 395
8.3 Radio interferometric observations of satellites 406

9 The Earth's gravity field **408**
9.1 Interpretation: general considerations 409
9.2 Gravity and tectonics: some examples 438
9.3 The core-mantle boundary 461

10 Crustal movements **466**
10.1 Stress in the crust and lithosphere 468
10.2 Instantaneous global tectonic motions 479
10.3 Vertical movements on geological time scales 492
10.4 Deformation at plate boundaries: some examples 513
10.5 Glacial rebound 532

11 Tides and rotation of the Earth **546**
11.1 The free rotational modes of the Earth 548
11.2 The forced nutations of the Earth 571
11.3 Tidal estimates of Love numbers 577
11.4 Tidal accelerations, torques, and dissipation 596
11.5 Some rotational excitation mechanisms 614

12 Epilogue **641**

Notation **646**

Basic constants **652**

References **654**

Index **710**
