</tbody>
</table>
3. Dissipative Medium. Quasi-Stationary Solutions ..... 68
4. Structure of a Cylindrical Shock Wave. The Self-Similar Approach ................. 70
5. General Structure of Spatially Symmetric Waves with Account of Nonlinearity and Dissipation ... 73
6. Features of Propagation of Converging and Diverging Waves ......................... 75

4. Sound Waves in Dispersive Media ................. 79
   1. The Dispersive Properties of a Medium, A Medium with Relaxations .............. 79
   2. Weak and Strong Dispersion ........................................ 85
   3. Propagation of Finite Disturbances in a Relaxing Medium ....................... 88

5. Interaction of Sound Waves ......................... 97
   1. Collinear Interaction of Plane Waves ................................ 97
   2. Scattering of Sound by Sound ..................................... 107
   3. Standing Waves of Finite Amplitude ................................ 120
   4. On the Interaction of Sound with Waves of Another Form ....................... 130

6. Parametric Phenomena in Sound Waves ............ 137
   1. Three-Particle Parametric Interactions ................................ 137
   2. Parametric Sound Amplification in Media without Dispersion ................. 145
   3. Parametric Amplification of Sound in Artificial Systems with Dispersion .... 158

   2. Calculation of Waves Reflected from Discontinuities .......................... 170
   3. The Constant Component as a Consequence of the Nonlinear Self-Action of Waves ........ 175
CONTENTS

8. Acoustic Streaming ........................................ 187
   1. Derivation of the System of Equations for Acoustic Streaming ...................... 187
   2. Eckart Streaming ........................................... 191
   3. Multidimensional Streaming .................................. 197
   4. Other Types of Streaming .................................... 206
   5. Laws of Similarity and Classification of Acoustic Streaming ......................... 210

9. Propagation of Bounded Sound Beams ......................... 213
   1. Equation of the Nonlinear Acoustics of Bounded Beams .................................. 213
   2. The Parabolic Equation. Some Problems of Linear Diffraction Theory ............... 216
   3. Nonlinear Effects in Sound Beams ................................... 220
   4. Approximate Solutions for Large and Small N Numbers .................................. 223
   5. Nonlinear Geometric Acoustics. Distortion of Unipolar Disturbances ............... 228

10. Statistical Phenomena in Nonlinear Acoustics .............. 239
    1. Randomly Modulated Sound Waves ................................ 239
    3. Interaction of Modulated Waves ................................ 254
    4. Quasi-Harmonic Signals in the Presence of Phase Fluctuations Only .................. 257
    5. The Interaction of Regular Waves with Random Waves ................................ 259
