Ralf Merz

Understanding and estimating flood probabilities at the regional scale

Dissertationsschrift

Herausgeber:

o.Univ.-Prof. Dipl.-Ing. Dr.techn. Dieter Gutknecht

Institut für Hydraulik, Gewässerkunde und Wasserwirtschaft

Technische Universität Wien

Wien, 2002

WAR TU Darmstadt

TABLE OF CONTENTS

1. **Introduction**
2. **Digital data base and initial data analyses**
 - 2.1 Introduction
 - 2.2 Overview of the data set
 - 2.2.1 Catchment characteristics
 - 2.2.2 Flood peak data
 - 2.2.3 Other hydrological data
 - 2.3 Initial data analyses
3. **Flood frequency regionalisation – spatial proximity vs. catchment attributes**
 - 3.1 Introduction
 - 3.2 Data
 - 3.3 Methods
 - 3.3.1 Flood moments
 - 3.3.2 Geostatistics (Kriging)
 - 3.3.3 Multiple regression
 - 3.3.4 Geostatistics and catchment attributes (External drift kriging, Georegression)
 - 3.3.5 Region of Influence approach
 - 3.3.6 Analysis of predictive performance
 - 3.4 Results
 - 3.4.1 Spatial proximity - Kriging and effect of record length
 - 3.4.2 Catchment attributes - Multiple Regression
 - 3.4.3 Spatial proximity and catchment attributes
 - 3.4.4 Catchment attributes – Region of Influence
 - 3.4.5 Comparison of methods
 - 3.4.6 Analysis of error statistics
 - 3.5 Conclusions
4. **Scale effects in conceptual water balance modelling**
 - 4.1 Introduction
 - 4.2 Data
 - 4.3 Model
 - 4.3.1 Snow model
 - 4.3.2 Soil moisture accounting
 - 4.3.3 Response and transfer functions

- 4.3.4 Model calibration and verification
- 4.4 Results of model calibration and verification
- 4.5 Does the model performance change with catchment scale?
- 4.6 Do model parameters change with catchment scale?
- 4.7 Effects of the length of calibration period on model performance
- 4.8 Discussion and conclusions
- 5. Regionalisation of catchment model parameters**
 - 5.1 Introduction
 - 5.2 Data
 - 5.3 Model and calibration
 - 5.4 Parameter uncertainty
 - 5.5 Spatial patterns of model parameters
 - 5.6 Model parameters vs. catchment attributes
 - 5.7 Model efficiencies of regionalised model parameters
 - 5.8 Conclusions
- 6. A process typology of regional floods**
 - 6.1 Introduction
 - 6.2 Data and methods
 - 6.3 Proposed process types
 - 6.4 Process indicators
 - 6.5 Process classification
 - 6.6 Results
 - 6.6.1 Classification results of flood magnitudes
 - 6.6.2 Regional patterns of process types
 - 6.6.3 Process types and event properties
 - 6.6.4 Process types and seasonality
 - 6.6.5 Process types and flood sample characteristics
 - 6.7 Discussion and conclusions
- 7. Summary of results and conclusions**
- 8. References**

Appendix Process Types of Austrian Flood Peaks (1971-1997)
