TABLE OF CONTENTS

PART I

THE STRUCTURES OF DATA AND PROGRAMS

1 < Introduction

2 < Hierarchical Organisation

3 < Repetitive Structures

- Input data
- The program

4 < Detailed Organisation of a program

- General
- Input instructions
- Branch instructions
- Preparation of branch instructions
- Calculations
- Output instructions
- Detailed instruction list
- Validation of a program by using the outputs

5 < Alternative Structures

- Output data (results)
- Input data
- The program
- Detailed organisation
- Elementary program structures
- Recapitulative example

6 < Complex structures

- Complex repetitive structures
- Complex mixed structures
- Conclusion of Part I

PART II

THE OPTIMISATION OF PROGRAMS AND THE PROCESSING PHASES**1 < Input data of complex alternative structure and tree structures**

- Processing using tree structures
- Actions performed on disjoint or wholly included data sets
- Simplification of tree structures
- Codes that can take N values

2 < Complex alternative structures in programs

- Optimal solutions using complex alternative structures
- Multiple sources of input
- Composite solutions
- Recapitulative example

3 < Chain-linked truth tables

- Chains of tables
- The reconstruction of a non-hierarchically organised program

4 < The processing phases

- Definition of the phases
- General recapitulation
