Contents

part I

The public economy

1

1. The no-government economy

3

The orderly anarchy. The economic organization. Principle of consumer sovereignty. The voluntary economy. Social justice, monopoly, instability, growth, and the quality of life. A basis for further discussion.

2. The all-government economy

9

The collectivity of choice. The potential for trade in presence of a numeraire. Collective organization and economic efficiency. Collective organization and distribution. The world of equals. Equal endowments and differential preferences. Differential endowments and equal preferences. Differential endowments and differential preferences. The United States in 1975.

3. Government as an economic unit

17

The subject of public finance. What is government? The government as a means of individual action.

4. Collective goods and services

25

Collective goods. The range of collective goods. The common defense. Law and order. Environmental control. Monetary stability. Regulatory

measures. Political boundaries and indivisibility. Public financing and public operation. Quasi-collective or impurely public goods and services. Private services publicly provided. Collective interest and market activity. Poverty relief and the social services. Miscellaneous government services.

5. The development of the public sector 37

The constitutional setting: Government as referee. Government as producer-supplier of "public goods." What should we try to measure? Measures of governmental activity: *Total governmental expenditure. Governmental resource absorption. Government employment. Government activity relative to gross national product.* Total government expenditure. Resources absorbed by government. Government employment.

6. Reasons for growth of the public sector 54

War and war-related expenditure. Federal "civil" expenditures. State-local expenditures. Wagner's law of increasing public activity: *Income elasticity of demand for public services. Price elasticity of demand and differential productivity. Population growth, external diseconomies, and congestion. Collective decision processes and the provision of public goods.* Displacement and scale effects.

part II

Social goals and fiscal institutions 65

7. Fiscal neutrality and economic efficiency 67

The ideally neutral fiscal system: *Wicksell's principle of taxation. Second-order efficiency. The lump-sum tax. The general proportionate income tax. The general sales tax. The lump-sum subsidy. The conception of general expenditure.* Equity and efficiency: *Equal treatment for equals.* Efficiency as a fiscal norm.

8. Redistribution via the fiscal process 81

Income distribution in the no-government economy. The ethics of marginal productivity distribution. Redistribution through the fiscal process: *Distribution in an ideally neutral structure when redistribution as such is not a collective good. Redistribution as a genuinely collective good. Constitutional redistribution emergent from social contract. Redistribution in democratic decision process. Public spending programs designed to equalize opportunities. Negative income taxation.* Redistribution by non-fiscal means.

9. Traditional principles of public finance 94

The fundamental fiscal asymmetry. The principle of horizontal equity. The ability-to-pay principle. The benefit principle.

part III

- The fiscal decision process: The theory of public choice** 105
10. The political basis for fiscal decisions 107
Government as a utility-maximizing entity. Government as a ruling committee, class, group, or "establishment." Government as a democratic process.
11. Simple models of majority voting 112
Simple majority voting—the cyclical majority possibility: *Simple majority voting—single-peaked preferences*. Majority voting and the demand for public goods. Public goods demand and relative incomes. Empirical tests for tax structure efficiency.
12. Complex majority voting models 122
Majority voting and a two-sector budget. Cyclical majority and pareto optimality. Cyclical majority and many person groups. Majority voting and explicit vote trading under two-item budgets. Tax constraints in a two-sector budget under majority voting. Tax adjustments and potential agreement under two-sector budgets.
13. The fiscal "constitution" 133
Tax shares, divisibility, and zero-sum games. How can general taxes be explained? Why must all persons pay taxes in the same way? Progressive taxation and democratic consensus. Direct versus indirect taxation.
14. Public choice and budgetary size 139
The separation of expenditure and tax choices. Fragmentation of budgetary decision making: *Controllability of outlays and budgetary size*. Majority rule and budgetary size. Voters, politicians, and bureaucrats.
15. Bureaucracy and the supply of public services 151
Models of bureaucracy. Can bureaucratic performance be improved? Education—an example.

part IV

- Federal expenditures** 159
16. The federal government budget 161
The meaning of the "budget." The expenditure budget and the executive. The budgetary process: *Congressional budget reform of 1974*. The unified budget. The budget as a combined account. Budgetary classifications of federal expenditures: *Functional classification*. *Controllability classification*. *Agency classification*. Planning and program budgeting (PPBS).
17. Efficiency in federal spending 175
The notion of efficiency. The criterion problem. Public expenditure: High-level efficiency. Rationality in decision making. Low-level efficiency:

	<i>Suboptimization. Operations research. Systems analysis: From low to high levels. Cost-benefit comparisons. Difficulties in cost-benefit estimation. Efficiency and interdependence. Bureaucratic limits to governmental efficiency.</i>	
18.	Federal expenditures for national defense	191
	Expenditure for military personnel. The volunteer army. Expenditure for operation and maintenance. Expenditure for procurement. Research and development. Systems analysis applied to military spending.	
19.	Federal nondefense spending	203
	International affairs and finance. Space research and technology. Agriculture and rural development. Natural resources and environment. Commerce and transportation. Community development and housing. Education and manpower. Health. Income security. Veterans' benefits and services. General revenue sharing. Interest. General government.	
part V		
	Federal taxation	221
20.	The federal revenue structure: An overview	223
21.	Personal income taxation: Conceptual problems	226
	The definition of income. Definition of the reporting unit. Basic problems of measurement. Nonincome bases for tax discrimination. Discrimination by income size: Progressive taxation. The bases for progressive taxation. Negative income taxation.	
22.	Personal income taxation in the United States	237
	Definition of the tax base. Exemptions and deductions: <i>Contributions. Interest. Taxes. Medical expenses. Miscellaneous deductions. Summary of personal deductions.</i> Rate structure. Collection and enforcement.	
23.	Personal income taxation: Economic effects	255
	The notion of a general tax. Announcement effects of an income tax: <i>Work versus leisure. Income in kind. Incentives to save.</i> Proportional and progressive income taxation: <i>The decreasing "price" of leisure. Rational occupational choice. Incentives to save.</i> Effects of existing institutions of income taxation: <i>Absence of averaging. Favorable treatment of capital gains.</i>	
24.	Inflation and progressive income taxation	268
	Inflation and proportional taxation. Real rates of tax under progression. <i>Ad hoc</i> adjustments in rate structure. Built-in or automatic adjustment for inflation. Inflation as a tax. A bit of conjectural history. Inflation in a modern economy...Economic effects of inflation.	
25.	The corporation income tax	283
	The tax base. Tax administration. Rate structure. Rationale of the tax. Cyclical instability of revenues. The double taxation of corporate income.	

Direct economic effects: *Debt and equity financing. Expenditure to secure nontaxable income. Sluggishness in resource response to profit opportunities.* Incidence of the corporation income tax: *Neoclassical model: No short-run shifting, some long-run shifting. General equilibrium model: A tax on capital. Market power model: Short-run shifting.* Effect on collective choice. Special features of corporate income taxation: *Loss carry-over and carry-back and corporate mergers. Depletion allowances.*

26. Federal transfer taxation 300
Estate and gift taxes: *Federal estate tax. The federal gift tax.*
27. Federal excise taxes, and demand-restricting taxes generally considered: Sumptuary levies, pollution-control charges, and energy taxes 306
Federal excise taxation. Taxes to restrict demand: *Sumptuary taxes.* Taxation and pollution controls. The taxation of energy. Supply shortfalls and excess profits taxes. Excess profits taxes.
28. Employment taxes and the social security system 317
The social security system: *Base and rate structure. Incidence and economic effects. The social security system and the changing age profile.*

part VI

The national debt 325

29. The principles of public debt 327
Taxation versus borrowing. The burden of public debt. The transfer argument. The analogy with private debt. External and internal public debt. Real public debt and disguised money creation. When should governments borrow? Should public debt be retired? Macroeconomic policy aspects of public debt. National versus local government debt.
30. Existing public debts 344
The origin of the U.S. national debt. The composition of the national debt: *Government bonds. Treasury notes. Treasury bills.* The ownership of the national debt. Debt limitation. State and local debt.

part VII

State and local fiscal systems 353

31. State-local expenditure patterns 355
Division of responsibility between states and local units of government. State-local expenditures for education: *Economic rationale of educational spending. Economic effects of public financing of educational services.* State-local expenditures for highways: *Highways—public utilities or public goods. Highway taxes as user prices.* Criteria for highway investment and expenditure. State-local expenditures for health and welfare:

Public assistance. Public hospitals. Community facilities and services. Miscellaneous expenditures. Debt service: Tax exemption of interest on state-local securities.

32. State-local general revenue sources: Income taxation, specific excise taxation 376

General revenue. State and local income taxation. Specific excise tax: Sumptuary and regulatory. Specific excise taxation: Economic effects: *Competitive conditions—constant cost industry. Competitive conditions—constant demand price. Competitive conditions—increasing cost industry, decreasing demand price. Competitive conditions—prohibitive tax. Monopoly conditions—constant costs. Monopoly conditions—increasing costs. The excess burden of partial excise taxes. Choice through time—a case for specific excise taxation? The limitations on the partial equilibrium models.*

33. General sales taxation 396

Economic effects of general sales taxes. Secondary effects of general sales taxation. Advantages of general sales taxation. Disadvantages of general sales taxation.

34. The taxation of capital: Comparative analysis 406

The taxation of capital and income: A comparison. Ideological origins of property taxation: *The Physiocrats. The Ricardian theory of rent. The single tax and Henry George. The modern theory of economic rent.*

35. The property tax 417

The definition and classification of property. The assessment of property value. Assessed values and real values. Review and appeal of assessments. The setting of tax rates. Economic effects of property taxation: *Effects of a general capital tax. Tax capitalization. Effects of a specific property tax. Effects of actual property taxes.* Real property taxes and collective decisions.

part VIII

Intergovernmental fiscal relations 433

36. Fiscal and economic aspects of federalism 435

Independent fiscal authority. The economic aspects of federalism. Economic aspects and political realities. Political decentralization and individual choice. Interarea differences in fiscal capacity. Interstate differences in public service standards.

37. Federal-state fiscal coordination 451

Separation of tax sources. Common tax sources—supplements, credits, and shares: *Tax supplements. Tax deductibility. Tax credits. Tax sharing.* Federal grants-in-aid to state and local governments.

38. Revenue sharing	462
Characteristics of the revenue-sharing program. Economic aspects of revenue sharing.	
part IX	
Taxes, utility rates, and user prices	475
39. Public supply of private goods	477
Public supply and indirect taxation. The public utility. The user price and the tax. The determination of user price. Organization of public enterprise.	
part X	
Conclusion	493
40. Conditional prospects and projections	495
Index	501
