HANDBOOK OF POPULATION AND FAMILY ECONOMICS

VOLUME 1A

Edited by

MARK R. ROSENZWEIG
University of Pennsylvania
and
ODED STARK
University of Oslo and University of Vienna

Technische Hochschule Darmstadt
Volkswirtschaftliche Bibliothek

1997
ELSEVIER
AMSTERDAM · LAUSANNE · NEW YORK · OXFORD · SHANNON · TOKYO

CONTENTS OF THE HANDBOOK

VOLUME 1A

Chapter 1
Introduction: Population and Family Economics
MARK R. ROSENZWEIG and ODED STARK

PART I: THE FAMILY

Chapter 2
A Survey of Theories of the Family
THEODORE C. BERGSTROM

Chapter 3
The Formation and Dissolution of Families: Why Marry? Who Marries Whom? And What Happens upon Divorce
YORAM WEISS

Chapter 4
Intrahousehold Distribution and the Family
JERE R. BEHRMAN

Chapter 5
Intergenerational and Interhousehold Economic Links
JOHN LAITNER

PART II: FERTILITY

Chapter 6
The Cost of Children and the Use of Demographic Variables in Consumer Demand
BERNARD M.S. VAN PRAAG and MARCEL F. WARNAAR

Chapter 7
The Economics of Fertility in Developed Countries
V. JOSEPH HOTZ, JACOB ALEX KLERMAN and ROBERT J. WILLIS

Chapter 8
Demand for Children in Low Income Countries
T. PAUL SCHULTZ

PART III: MORTALITY AND HEALTH

Chapter 9
New Findings on Secular Trends in Nutrition and Mortality: Some Implications for Population Theory
ROBERT WILLIAM FOGEL

Chapter 10
Determinants and Consequences of the Mortality and Health of Infants and Children
KENNETH I. WOLPIN

Chapter 11
Mortality and Morbidity among Adults and the Elderly
ROBIN C. SICKLES and PAUL TAUBMAN

VOLUME 1B

PART IV: MIGRATION

Chapter 12
Internal Migration in Developed Countries
MICHAEL J. GREENWOOD

Chapter 13
Internal Migration in Developing Countries
ROBERT E.B. LUCAS

Chapter 14
Economic Impact of International Migration and the Economic Performance of Migrants
ROBERT J. LALONDE and ROBERT H. TOPEL

Chapter 15
International Migration and International Trade
ASSAF RAZIN and EFRAIM SADKA

PART V: AGING, DEMOGRAPHIC COMPOSITION, AND THE ECONOMY

Chapter 16
The Economics of Individual Aging
MICHAEL D. HURD

Chapter 17
The Economics of Population Aging
DAVID N. WEIL

Chapter 18
Demographic Variables and Income Inequality
DAVID LAM

PART VI: AGGREGATE POPULATION CHANGE AND ECONOMIC GROWTH

Chapter 19
Population Dynamics: Equilibrium, Disequilibrium, and Consequences of Fluctuations
RONALD D. LEE

Chapter 20
Growth Models with Endogenous Population: a General Framework
MARC NERLOVE and LAKSHMI K. RAUT

Chapter 21
Long-Term Consequences of Population Growth: Technological Change, Natural Resources, and the Environment
JAMES A. ROBINSON and T.N. SRINIVASAN

CONTENTS OF VOLUME 1A

Introduction to the Series v

Contents of the Handbook vii

Preface to the Handbook xi

Chapter 1
Introduction: Population and Family Economics 1
MARK R. ROSENZWEIG and ODED STARK

PART I: THE FAMILY

Chapter 2
A Survey of Theories of the Family 21
THEODORE C. BERGSTROM

1. Introduction 22
2. Household technology and utility possibility frontiers 22
   2.1. Household production functions 22
   2.2. Household public goods 23
   2.3. The household utility possibility frontier 24
   2.4. Transferable utility in the household 27
3. Decision-making in the family 31
   3.1. Unitary theories of family decision-making 32
   3.2. The family with pluralistic decision-making 37
4. Theories of the marriage and household membership 45
   4.1. Matching models 45
   4.2. Household allocation in the shadow of the marriage market 49
   4.3. Age at marriage 53
   4.4. Alternative household structures 57
5. Interdependent preferences within families 59
   5.1. Benevolence and other forms of unselfishness 59
   5.2. Interdependent utility functions 60
   5.3. Intergenerational utility interdependence 62
   5.4. Pareto optimality of competitive equilibrium in households with utility interdependence: the First Welfare Theorem 66
   5.5. Sustainability of Pareto optimality as competitive equilibria: the Second Welfare Theorem 68
   5.6. Evolutionary models of benevolence with the family 71
   5.7. Conscious choice of altruism 73

References 74

Chapter 3
The Formation and Dissolution of Families: Why Marry? Who Marries Whom? And What Happens Upon Divorce 81
YORAM WEISS

1. Introduction 82
2. Economic reasons for marriage 82
   2.1. Increasing returns 83
   2.2. Imperfect credit market 85
   2.3. Sharing collective goods 86
   2.4. Risk sharing 87
3. How families solve their economic problems 89
   3.1. Transferable utility 89
   3.2. The role of altruism 91
   3.3. Modes of family decision-making 94
   3.4. Tests of the family's modes of behavior 96
4. The marriage market 99
   4.1. Stable matching 100
   4.2. Nontransferable utility and the Gale–Shapley algorithm 103
   4.3. Search 104
   4.4. The division of the gains from marriage 109
5. Divorce and its economic consequences 110
   5.1. Determinants of divorce 110
   5.2. Divorce transfers 113
   5.3. Defensive investments 117
6. The future of the family 119
References 120

Chapter 4
Intrahousehold Distribution and the Family 125
JERE R. BEHRMAN

1. Introduction 126
2. Consensus parental preference models of intrahousehold allocations 128
   2.1. Consensus parental preference models with passive children 129
   2.2. Active children and Becker's "Rotten Kid Theorem" 144
3. Empirical explorations of single-period consensus preference models 146
   3.1. Intrahousehold human resource allocation responses to prices related to individual endowments 147
   3.2. Estimates of reinforcement or compensation of endowments 151
   3.3. Other evidence on gender and birth-order effects 163
   3.4. Sibling differences in earnings and transfers 167
4. Nonconsensus models of household behavior 172
   4.1. Nash bargaining models of intrahousehold allocations 172

4.2. Tests of income pooling in demand relations 174
4.3. Pareto-efficient collective household models 176
5. Conclusions 179
References 182

Chapter 5
Intergenerational and Interhousehold Economic Links 189
JOHN LAITNER

1. Introduction 190
2. Altruism 190
2.1. A simple altruistic model 191
2.2. Altruistic and nonaltruistic transfers 196
2.3. Economic linkages 199
2.4. Empirical evidence on interfamily transfers 206
2.5. Conclusion 211
3. More sophisticated models with altruism 212
3.1. Two-sided altruism 212
3.2. General equilibrium 217
3.3. Human capital 222
3.4. Conclusion 227
4. Transactions cost approach 228
4.1. Production 228
4.2. Insurance and credit 230
4.3. Paternalistic preferences and the demonstration effect 233
5. Conclusion 234
References 235

PART II: FERTILITY

Chapter 6
The Cost of Children and the Use of Demographic Variables in Consumer Demand 241
BERNARD M.S. VAN PRAAG and MARCEL F. WARNAAR

1. Introduction 242
2. Basic notions 244
3. Naive estimates 245
4. Traditional approaches 248
5. Equivalence scales and neo-classical demand systems 250
6. Implementing the complete demand system approach 255
7. The critique by Pollak and Wales (1979) 258
8. Subjective scales: the Leyden approach 260
9. Summary and conclusion 263

Appendix A: Official Yugoslav equivalence scale 264
Appendix B: Overview of various equivalence scales 265
References 269

Chapter 7
The Economics of Fertility in Developed Countries 275
V. JOSEPH HOTZ, JACOB ALEX KLERMAN and ROBERT J. WILLIS

1. Introduction 276
2. Fertility in the US: data, trends and the stylized facts 277
   2.1. Completed family size 278
   2.2. Childlessness 280
   2.3. The mother's age at first birth and the pacing of subsequent births 281
   2.4. Marital and nonmarital childbearing 283
   2.5. Contraceptive practices 287
   2.6. Relationship between fertility and female labor force participation 291
3. Static models of fertility behavior 292
   3.1. The quality–quantity model 294
   3.2. Time allocation and the demand for children 298
   3.3. Marriage, fertility and out-of-wedlock childbearing 305
4. Life-cycle models of fertility 309
   4.1. Features of life-cycle models of fertility and the optimal solution 309
   4.2. The optimal timing of first births 317
   4.3. The optimal spacing of births 319
   4.4. Contraceptive choice and the efficacy of contraceptive methods 321
5. Empirical implications of models of fertility: identification issues, econometric approaches and empirical examples 322
   5.1. Strategies for identifying price and income effects for parental fertility choices 322
   5.2. Identifying the key implications of the quantity–quality models of fertility: the use of twins 333
   5.3. Econometric approaches to life-cycle models of fertility 335
6. Conclusion 342
References 342

Chapter 8
Demand for Children in Low Income Countries 349
T. PAUL SCHULTZ

1. Introduction 350
2. Regional trends in birth and death rates 351
3. Micro foundations for household behavior 355
   3.1. The general household demand framework 357
   3.2. A simple production–demand model of fertility 361
   3.3. Quantity and quality of children 363
   3.4. Empirical applications to the demand for children 365

3.5. Interdependencies among endogenous variables: fertility and mortality 368
3.6. Estimating household production functions 370
3.7. Endogenous preferences and time-series change 372
3.8. Dynamic models and birth spacing 373
3.9. Birth control and family planning 376
4. Institutional change and macroeconomics of fertility 377
4.1. Overlapping generations model 378
4.2. Credit markets, social security, and life-cycle savings 379
4.3. Mobility, marriage, risk, and technical change 379
5. Empirical evidence 380
5.1. Fertility effects of wages and nonhuman capital 380
5.2. Child mortality 384
5.3. Sex preference of parents and fertility 386
5.4. Technical and institutional change 388
5.5. Cross-program effects 390
5.6. Inter-country comparisons of fertility 393
6. Conclusions 417
Data Appendix 419
References 420

PART III: MORTALITY AND HEALTH

Chapter 9
New Findings on Secular Trends in Nutrition and Mortality: Some Implications for Population Theory 433
ROBERT WILLIAM FOGEL

1. Introduction 434
2. The evolution of thought on, and knowledge of, the secular decline in mortality 434
2.1. Initial efforts to explain the secular decline in mortality 435
2.2. McKeown's challenge to the consensus view 437
2.3. Crisis mortality and famines 440
3. Measuring the extent and significance of chronic malnutrition 445
3.1. Energy cost accounting 446
3.2. Estimating the levels and distributions of caloric consumption in Britain and France near the end of the Ancien Régime 449
3.3. The implications of stature and body mass indexes for the explanation of secular trends in morbidity and mortality 452
4. Implications for population theory 460
4.1. How variations in body size brought the population and the food supply into balance and determined the level of mortality 460
4.2. The nature of European famines 466
4.3. Contribution of improved nutrition and health to the growth of labor productivity 468

5. Conclusions and implications for current policy 470
References 473

Chapter 10
Determinants and Consequences of the Mortality and Health of Infants and Children 483
KENNETH I. WOLPIN

1. Introduction 484
2. The effect of infant and child mortality on fertility 488
   2.1. Theory 488
   2.2. Estimation issues 498
   2.3. Two biological mortality–fertility links 509
   2.4. A general model 511
   2.5. A brief survey of empirical results 513
3. The determinants of infant and child mortality 523
   3.1. The framework 523
   3.2. Empirical findings for selected behaviors 535
   3.3. Estimating the impact of public policy interventions 550
4. Conclusions 553
References 555

Chapter 11
Mortality and Morbidity Among Adults and the Elderly 559
ROBIN C. SICKLES and PAUL TAUBMAN

1. Introduction 561
2. Trends and sources of variations in international and US vital statistics 562
3. Structural economic models of health 576
   3.1. One-period models of health demand 577
   3.2. Dynamic models of health demand 587
   3.3. Death as an exhaustive state 597
4. Sources of data on mortality and morbidity and health measurement systems 598
   4.1. Mortality and morbidity data 598
   4.2. Measurement systems for health status 601
5. Statistical and numerical techniques 611
   5.1. Life-tables and mortality hazards 611
   5.2. Estimation of survival hazard models with heterogeneity 613
   5.3. Estimation of models of morbidity with heterogeneity/classical MLE 621
   5.4. Alternative estimators for structural dynamic models of health 623
6. Comments and conclusions 626
References 627
