

An Introduction to the Earth–Life System

Edited by Charles Cockell

Authors:

Charles Cockell 

Richard Corfield

Neil Edwards

Nigel Harris

Contents

CHAPTER 1 A HABITABLE PLANET	1
Neil Edwards	
1.1 How does the Earth differ from other planets?	1
1.2 Energy from the Sun	5
1.3 The Earth's surface temperature pattern	20
1.4 The Earth's air-conditioning and heating systems	24
1.5 Earth–ocean–atmosphere: the support system for life	47
Summary of Chapter 1	57
Learning outcomes for Chapter 1	59
CHAPTER 2 THE CARBON CYCLE	61
Richard Corfield	
2.1 Carbon and life	61
2.2 Carbon and climate	63
2.3 The natural carbon cycle: a question of timescale	64
2.4 A system in balance?	93
Summary of Chapter 2	100
Learning outcomes for Chapter 2	102
CHAPTER 3 PLATE TECTONICS, CLIMATE AND LIFE	103
Nigel Harris	
3.1 Volcanism and the Earth system	103
3.2 Volcanic aerosols and climatic change	108
3.3 Flood basalts and their effects on climate and life	112
3.4 Continental drift and climate	117
3.5 Sea-level changes: causes and consequences	130
Summary of Chapter 3	136
Learning outcomes for Chapter 3	138
CHAPTER 4 MOUNTAINS AND CLIMATE CHANGE	139
Nigel Harris	
4.1 Mountain building and the carbon cycle	139
4.2 The uplift of Tibet and the monsoon	142

4.3	Global climate change during the Tertiary	153
	Summary of Chapter 4	164
	Learning outcomes for Chapter 4	165
CHAPTER 5 THE EMERGENCE AND PERSISTENCE OF LIFE		167
	<i>Charles Cockell</i>	
5.1	Former worlds	167
5.2	Mat world	170
5.3	Empire of the eukaryotes	172
5.4	The carnival of the animals	185
5.5	The rules of the new evolutionary game	187
	Summary of Chapter 5	192
	Learning outcomes for Chapter 5	193
CHAPTER 6 LIFE IN THE PHANEROZOIC		195
	<i>Richard Corfield</i>	
6.1	The Proterozoic–Phanerozoic transition	198
6.2	Radiations and extinctions	206
6.3	The greening of the land	217
	Summary of Chapter 6	227
	Learning outcomes for Chapter 6	228
CHAPTER 7 THE EARTH AT EXTREMES		229
	<i>Charles Cockell</i>	
7.1	The icehouse world	229
7.2	Permo-Carboniferous glaciation and subsequent warming	234
7.3	The impact of land vegetation	239
7.4	A synthesis for the icehouse	244
7.5	The Cretaceous greenhouse world	245
7.6	Polar climate	246
7.7	Low-latitude vegetation and climate	253
7.8	Climate reconstructions	256
7.9	Geographical framework	259
7.10	A surfeit of carbon: the key to the Cretaceous greenhouse	265
7.11	Conclusions from the case studies	267
	Summary of Chapter 7	267
	Learning outcomes for Chapter 7	269

CHAPTER 8 END-OF-BOOK SUMMARY	271
<i>Charles Cockell</i>	
8.1 Possible worlds	271
8.2 Review of the options	271
8.3 Conclusions	274
ANSWERS TO QUESTIONS	275
APPENDICES 	294
A The elements	294
B SI fundamental and derived units	295
C The Greek alphabet	296
D Additional figures	297
GLOSSARY	299
FURTHER READING	308
ACKNOWLEDGEMENTS	310
SOURCES OF FIGURES, DATA AND TABLES	313
INDEX	315
