

Single-case Experimental Designs: Strategies for Studying Behavior Change

by

MICHEL HERSEN, Ph.D.

*Department of Psychiatry
Western Psychiatric Institute and Clinic
University of Pittsburgh School of Medicine*

and

DAVID H. BARLOW, Ph.D.

*Section of Psychiatry and Human Behavior
Brown University
and Butler Hospital*

with an invited chapter on statistical analyses

*by ALAN E. KAZDIN, Ph.D.
The Pennsylvania State University*

PARIS • FRANKFURT

Contents

The Authors	ix
Preface	xi
Epigram	xiii
1. The Single-case in Basic and Applied Research: An Historical Perspective	
1.1. Introduction	1
1.2. Beginnings in Experimental Physiology and Psychology	2
1.3. Origins of the Group Comparison Approach	5
1.4. The Development of Applied Research: The Case Study Method	8
1.5. Limitations of the Group Comparison Approach	13
1.6. Alternatives to the Group Approach	17
1.7. The Scientist-Practitioner Split	21
1.8. A Return to the Individual	22
1.9. The Experimental Analysis of Behavior	28
References	31
2. General Issues in a Single-case Approach	
2.1. Introduction	34
2.2. Variability	35
2.3. Experimental Analysis of Sources of Variability Through Improvised Designs	40
2.4. Behavior Trends and Intra-Subject Averaging	47
2.5. Relation of Variability to Generality of Findings	50
2.6. Generality of Findings	51
2.7. Limitation of Group Design in Establishing Generality of Findings	53
2.8. Homogeneous Groups vs. Replications of a Single-case Experiment	57
2.9. Applied Research Questions Requiring Group Designs	63
References	68

3. General Procedures in Single-case Research

3.1. Introduction	70
3.2. Repeated Measurement	71
3.3. Choosing a Baseline	74
3.4. Changing One Variable at a Time	82
3.5. Reversal and Withdrawal	92
3.6. Length of Phases	100
3.7. Evaluation of Irreversible Procedures	106
References	110

4. Repeated Measurement Techniques

4.1. Introduction	113
4.2. Indirect and Direct Measurement	114
4.3. Motoric Measures	120
4.4. Self-Report Measures	131
4.5. Physiological Measures	138
4.6. Relationships Among Motoric, Self-Report, and Physiological Measures	144
References	159

5. Basic A-B-A Designs

5.1. Introduction	167
5.2. A-B Design	168
5.3. A-B-A Design	176
5.4. A-B-A-B Design	181
5.5. B-A-B Design	189
5.6. A-B-C-B Design	192
References	195

6. Extensions of the A-B-A Design, Uses in Drug Evaluation, and Interaction Design Strategies

6.1. Extensions and Variations of the A-B-A Design	198
6.2. A-B-A-B-A-B Design	199
6.3. A-B-A-B-B'-B''-B''' Design	202
6.4. Drug Evaluations	204
6.5. Strategies for Studying Interaction Effects	213
References	223

7. Multiple Baseline, Multiple Schedule, and Concurrent Schedule Designs	
7.1. Introduction	225
7.2. Multiple Baseline Designs	226
7.3. Multiple Schedule Designs	253
7.4. Concurrent Schedule Design	258
References	262
8. Statistical Analyses for Single-case Experimental Designs by Alan E. Kazdin	
8.1. Introduction	265
8.2. The Case Against the Use of Statistics	266
8.3. The Case For the Use of Statistics	269
8.4. Serial Dependency and Conventional Statistical Analyses	272
8.5. Variations of <i>t</i> Test and ANOVA	275
8.6. Time-Series Analysis	278
8.7. Randomization Tests	290
8.8. The R_n Statistic	298
8.9. The Split Middle Method of Trend Estimation	303
8.10. Evaluation of Statistical Tests: General Considerations	310
8.11. Conclusion	313
References	314
9. Beyond the Individual: Replication Procedures	
9.1. Introduction	317
9.2. Direct Replication	318
9.3. Clinical Replication	335
9.4. Systematic Replication	338
9.5. Replication of Single-case Experiments: Some Advantages	355
References	357
Author Index	363
Subject Index	371
