APPLICATION OF INTEGRAL TRANSFORMS IN THE THEORY OF ELASTICITY

EDITED BY
I.N. SNEDDON
UNIVERSITY OF GLASGOW

SPRINGER - VERLAG

WIEN - NEW YORK

CONTENTS

A. **Integral Transform Methods for the Solution of Mixed Boundary Value Problems in the Classical Theory of Elastostatics**
by Ian N. Sneddon

I. Integral Transforms

1.1 Introduction 1
1.2 Fourier Transforms 4
1.3 Multiple Fourier Transforms 9
1.4 Mellin Transforms 11
1.5 Hankel Transforms 13

II. Plane Strain Problems

2.1 The Equations of Plane Strain 18
2.2 Basic Solutions for an Elastic Half-Plane 20
2.3 Relation of the Integral Transform Solution to Westergaard's Solution for a Half-Plane 24
2.4 The Loading of a Half-Plane 25
2.5 The Distribution of Stress in the Vicinity of a Griffith Crack in an Infinite Plane 27
2.6 A Note on the Boussinesq Problem for a Half-Plane 35
2.7 Solution of the Equilibrium Equations for an Elastic Strip 37
2.8 The Stress near a Griffith Crack in an Infinite Strip 39
2.9 The Stress in the Vicinity of an Infinite Row of Collinear Cracks 42
2.10 The Stress in a Strip of Finite Width containing an Internal Crack perpendicular to its Edges 50
2.11 Crack at the Interface of Two Bonded Half-Planes 59

III. Three-Dimensional Problems

3.1 Muki's Solution of the Equilibrium Equations in Cylindrical Coordinates 70

3.2 The Axisymmetric Boussinesq Problem 76
3.3 The Axisymmetric Boussinesq Problem with Adhesion 84
3.4 The Stress in the Vicinity of a Penny-Shaped Crack in an Infinite Solid 88
3.5 The Effect of Shear on a Penny-Shaped Crack at the Interface of an Elastic Half-Space and a Rigid Foundation 91

B. Some Punch and Crack Problems in the Theory of Elasticity
by Zbigniew Olesiak

1. The Displacement Modes of Cracks 99
2. The Effect of Cohesion Forces and Plastic Zone Surrounding Cracks 106
2.1 Unbounded Two-dimensional Solid 106
2.2 A Penny-Shaped Crack in an Elastic-Plate Unbounded Region 109
2.3 Plastic Zone in a Thick Layer with a Penny-Shaped Crack 113
3. The Influence of the Temperature on the Stress Distribution in Crack Problems 124
3.1 Thermal Stresses in an Infinite Solid Containing a Penny-Shaped Crack 124
4. Some Torsional Problems in the Theory of Elasticity 135
4.1 General Relations 135
4.2 The Reissner-Sagocci Problem 137
4.3 A Penny-Shaped Crack in a Solid under Torsion 139
4.4 The Torsion of a Thick Strip 141
5. Weber Transforms 143
5.1 Weber-Orr Integral Theorem 143
5.2 Associated Transforms of Weber Type 146
5.3 Properties of the Weber Transforms 152
5.4 Another Form of the Weber Transform 154
5.5 A Simple Application of Weber Transforms 156
5.6 Applications in the Theory of Elasticity 157
5.7 Stress in a Thick Plate with a Cylindrical Hole 159
5.8 The Punch Problem for an Elastic Half-Space (or Layer) with a Cylindrical Hole 162

C. Distortion Problems of Elasticity
by Witold Nowacki

1. Fundamental Relations and Equations 171
2. Basic Relations and Equations of Thermoelasticity 175
3. Thermal Inclusions: Nucleus of Thermoelastic Strain 184
4. Heat Sources in an Elastic Space 193
5. Heat Sources in an Infinite Space: Coupled Problem 204
6. Discontinuous Temperature Field in a Semi-Space 206

7. Stresses in an Elastic Half-Space due to a Heat Exposure on the Bounding Plane 212
8. Heat Sources in an Elastic Disk 220
9. Thermal Stresses in Infinite Cylinders: Quasi-Static Problem 228
10. The Linear Theory of Dislocations: The Volterra Concept of Dislocations 233

D. Dynamical Problems of the Theory of Elasticity
by George Eason

1. The Basic Equations

1.1 Introduction 241
1.2 The Equations of Classical Electrodynamics 243
1.3 Scalar and Vector Potential Functions 245
1.4 Summary of Equations in Cartesian Coordinates 247
1.5 Summary of Equations in Cylindrical Polar Coordinates 251
1.6 Summary of Equations in Spherical Polar Coordinates 253
1.7 Summary of Integral Transform Results 253

2. The Propagation of Plane Harmonic Waves

2.1 Introduction 256
2.2 Plane Waves in an Infinite Solid 256
2.3 Reflection of SH-waves at a Stress-Free Surface 258
2.4 Reflection of P-waves at a Stress-Free Surface 260
2.5 Relfection of SV-waves at a Stress-Free Surface 262
2.6 Rayleigh Surface Waves 264

3. Propagation of Distrubances from Spherical and Cylindrical Cavities

3.1 Introduction: The Semi-Infinite Slab 265
3.2 The Spherical Cavity 267
3.3 The Cylindrical Cavity 270
3.4 Cylindrical Cavity, Transverse Isotropy 273

4. Forces Moving with Constant Velocity

4.1 Introduction 275
4.2 Infinite Solid, Two Dimensions 276
4.3 Semi-Infinite Solid, Two Dimensions 283
4.4 Thick Slab, Two Dimensions 288
4.5 Infinite Solid, Three Dimensions 288
4.6 Semi-Infinite Solid, Three Dimensions 294

5. Periodic Forces: Two Dimensions

5.1 Introduction 301
5.2 The Infinite Solid 302
5.3 The Semi-Infinite Solid: Plane Strain 305

6. The Suddenly Applied Force

6.1 Introduction 311
6.2 Impulsive Line Loading, Anti-Plane Strain 312
6.3 Impulsive Line Loading, Plane Strain 319
6.4 Step Point Loading 329

7. Other Applications

7.1 Introduction 337
7.2 Anisotropic Elasticity 338
7.3 Thermoelasticity 341
7.4 Materials with Microstructure 343

E. Dynamics of Elastic and Viscoelastic Systems
by Witold Nowacki

1. Introduction 349
2. The Principle of Virtual Work and Hamilton's Principle 350
3. Transverse Vibrations of Some Simple One- and Two-Dimensional Systems 354
4. General Solution of Differential Equations of Transverse Vibrations 370
5. The Green's Function for the Transverse Vibration of a String of Finite Extent 374
6. The Green's Function for the Transverse Vibrations of a Membrane of Finite Extent 379
7. Free Vibrations of an Infinite String and an Infinite Membrane 383
8. The Green's Function $G(x,x',t)$ for the Transverse Vibrations of a Rod 388
9. The Green's Function $G(x,x',t)$ for the Transverse Vibrations of a Thin Plate 396
10. Transverse Vibrations of Rods and Plates resting on an Elastic Foundation 404
11. Free Vibrations of an Infinite Rod and of an Infinite Plate 409
12. Transverse Vibrations of Viscoelastic Rods and Plates 414
