Preface

PART ONE	BIRTH OF A NEW DISCIPLINE: BIOCOMPUTING	1
1	Progress in computing	3
	<i>Tsuguchika Kaminuma and Gen Matsumoto</i>	
1.1	From the scientific élite to the common household	3
1.2	Factors in the changing image of the computer	4
1.3	The transformation of computers into omnipotent machines	8
1.4	Similarities between biological development and computer programs	13
2	Tomorrow's computers	15
	<i>Tsuguchika Kaminuma and Gen Matsumoto</i>	
2.1	The maturation of computer technology	15
2.2	The problems with current computers	16
2.3	Re-evaluating the Von Neumann architecture	22
2.4	Research on non-Von Neumann architectures	23
2.5	Supercomputers	25
2.6	Massively parallel machines	27
2.7	Inference machines	28
2.8	Image processing and optical computers	30
3	Expectations from the life sciences	34
	<i>Tsuguchika Kaminuma and Gen Matsumoto</i>	
3.1	What is a biocomputer?	34
3.2	The honeymoon between the life sciences and the computer sciences	35
3.3	Progress during a lull	39

3.4	Horizons in the life sciences	42
3.5	The beginnings of new exchanges	45
3.6	Biocomputing as a new technological continent	47
PART TWO NEW DEVELOPMENTS IN THE LIFE SCIENCES		49
4	Bioenergetics and biodevices	51
	<i>Yasuo Kagawa</i>	
4.1	ATP and the conversion of biological energy	51
4.2	Direct measurement of energy metabolism	52
4.3	The devices and circuits of bioenergetics	55
4.4	The ultimate integration of biodevices	56
4.5	The specificity and sensitivity of biodevices	56
4.6	Amplifiers using biodevices	59
4.7	An analog-digital converter using a biodevice	61
4.8	Organic currents	63
4.9	Enzymes for ATP synthesis	65
4.10	The future of biodevices	66
5	Information processing in biological organisms	69
	<i>Joji Miwa, Yoh Tabuse and Tsuguchika Kaminuma</i>	
5.1	Developmental biology and computer research	69
5.2	Brenner's thoughts on the phenomenon of life seen as a computer	72
5.3	Investigations with nematodes	74
5.4	What is <i>C. elegans</i> ?	75
5.5	Conclusions	79
6	The neural circuitry of the brain	80
	<i>Masao Itoh</i>	
6.1	The neuron as the functional unit of the brain	81
6.2	The neural circuitry of the brain	83
6.3	Functional systems of the brain	87
6.4	The future of brain science	91
7	Thought and creativity	92
	<i>Noboru Hakkyou</i>	
7.1	Definitions of thought and creativity	92
7.2	The perception of 'sameness' and 'newness' in biological organisms	93
7.3	The mechanisms of exclusion	94
7.4	The creativity of the immune response	95
7.5	The evolutionary pressure for thought and voluntary movement	96

7.6	Long-term memory and the biological value of information	97
7.7	Memory and consciousness	99
7.8	The biological value of creativity	100
7.9	The language of brain waves and the plasma machine	101
PART THREE THE GENERAL PRINCIPLES OF BIOCOMPUTERS		105
8	Biodevice computers	107
	<i>Masuo Aizawa</i>	
8.1	Biochip fever	107
8.2	Transcending silicon technology	107
8.3	Learning from molecular structures	109
8.4	The importance of molecular processes	111
8.5	Biomolecules and semiconductor components	114
8.6	The semiconductor–biomolecule interface	117
8.7	From neuronal components to biocomputers	118
9	Learning from the brain to build a computer	120
	<i>Gen Matsumoto and Shozo Fujiwara</i>	
9.1	Introduction	120
9.2	Brains and computers	121
9.3	Biocomputing	125
9.4	Research in the neurosciences as seen from the perspective of the information sciences	128
9.5	Experimental demonstration of the model	134
9.6	Conclusions	139
10	The creative computer	140
	<i>Tsuguchika Kaminuma</i>	
10.1	Artificial intelligence and creativity	140
10.2	Creative thought in a machine	143
10.3	Preconditions for creative thought	147
10.4	The approach from practical applications	149
10.5	Computerizing the subconscious mind	154
10.6	Creativity and freedom	158
PART FOUR PLANS FOR BIOCOMPUTERS AND SOCIETY		161
11	The road towards realization of biocomputers	163
	<i>Tsuguchika Kaminuma and Gen Matsumoto</i>	
11.1	The increasing interest in biocomputing	163
11.2	Research trends	165
11.3	Previous evaluations of biocomputing	170
11.4	A map of research developments	176

11.5	The new style of research developments	183
11.6	The effects of large-scale projects	185
12	The impact of the biocomputer	188
	<i>Tsuguchika Kaminuma and Gen Matsumoto</i>	
12.1	The ripple effects of research developments	188
12.2	The impact on computing	190
12.3	Will biomachines do human work?	191
12.4	The technologies which society chooses	192
12.5	Implications for our understanding of man and nature	194
13	Recent developments in biocomputing projects in Japan	196
	<i>Gen Matsumoto</i>	
	Literature references	201
	Index	205
