PREFACE	XIII
NOTATION	XV
LIST OF FORMULAS	XIX

## 1 INTRODUCTION

1 Prefabrication requires skill	1
2 Consequences of prefabrication	2
3 Precast elements	5
4 The structure	12
<i>Selection of the structural elements 12; Assembly of precast elements 12; Connections 14; Modular coordination and tolerances 14; Possibilities of demounting 19</i>	
5 Strut and tie model	20
6 The composition of this book	24

## 2 THE ANCHORAGE OF REINFORCEMENT

1 The anchorage of straight high bond reinforcing bars	26
<i>The anchorage of a reinforcing bar in a wall with a tensile force 26; The anchorage of a reinforcing bar in the tensile zone of a beam with a tensile force 30; The anchorage of a welded mesh with a tensile force 32; The transmission to the concrete of a compressive force in a reinforcing bar 33; The anchorage of a bar with an anchorage plate welded at one bar end with a tensile force 35; The anchorage of a reinforcing bar to a welded cross-bar 36</i>	
2 Overlaps and splices in reinforcing bars	37
<i>Overlap or splice of two high bond bars, loaded in tension 37; Overlap of two bars, loaded in compression 40; Splice of two bars in compression by a cold joint 41; Overlap of bars by a grouted duct around a protruding</i>	

## VI Table of contents

	<i>bar 42; Coupling of bars with threaded ends 43; Overlap of two round curved bars, loaded in tension 44; Welded reinforcing bars 45</i>	
3	<i>Loops, hairpins and round curved reinforcing bars</i>	46
	<i>Loop in a reinforcing bar – Symmetrically loaded 46; Overlap of two bars behind a bend of 90° in one of the bars 49; Anchorage of a reinforcing bar by a bend of 90° 51; Hairpin in a reinforcing bar – Symmetrically loaded 53; Overlap of two symmetrical loops loaded in tension 55; Asymmetrical overlap of two loops 57; Asymmetrical overlap of loops in a corner 59</i>	
4	<i>Anchorage in the bend of stirrups</i>	61
	<i>Anchorage in the bend of a stirrup 61; Splice of parts of a stirrup by overlap 62; Splice of parts of a stirrup by hooks 62</i>	
5	<i>Reinforced concrete tension member in the serviceability state</i>	64
	<i>The relationship between a tensile force and the elongation 64; Crack width 64; Maximum elongation 67; The magnitude of the tensile force <math>F</math> at the initiation of the first crack 67; The relationship between the force <math>F</math> and the elongation <math>\epsilon</math> 67; Detailing of the reinforcement of a tension member 68; Values to be used in practical calculations 68; Example of calculation 69</i>	

### 3 THE ANCHORAGE OF PRESTRESSING STEEL

1	<i>Exterior concentrated compressive force</i>	71
	<i>Assumptions 71; The dimensions of the steel bearing plate 71; Tensile forces in the concrete in the zone of transfer 72; Group of bearing plates 74; Example of calculation 74</i>	
2	<i>Interior concentrated compressive force</i>	75
	<i>Strut and tie model 75; Example of calculation 77</i>	
3	<i>Prestressing force provided in a connection</i>	78
4	<i>Coupling of prestressing tendons</i>	79
5	<i>Pretensioned prestressing</i>	79
	<i>Transmission of a prestressing force by bond 79; Transverse reinforcement in the transmission zone 83</i>	
6	<i>Transfer of prestressing forces to a concrete structure</i>	85

### 4 JOINTS

1	<i>Mortar joint</i>	87
	<i>Assumptions 87; Determination of the strength of a mortar joint 87; Detailing 89; Execution 91; Example of calculation and example of the cross-section of the reinforcement in a joint between two columns 92</i>	
2	<i>Concrete joints cast in situ</i>	94
	<i>Assumptions 94; Calculation of the strength of concrete joints 94; Reinforcement crossing concrete joints 99; Reinforcement in the concrete ele-</i>	

	<i>ment near the surface of the joint</i> 100; <i>Execution</i> 101; <i>Example of calculation and detailing</i> 102	
3	Joints with a bonding agent <i>Assumptions</i> 103; <i>Calculation of the strength of the joints</i> 103; <i>Functions of the bonding agent</i> 104; <i>Execution</i> 105	103
4	'Cold' joints (match cast joints without a bonding agent) <i>Assumptions</i> 105	105
5	Shear in the interface between precast concrete units and in situ concrete <i>Introduction</i> 106; <i>The magnitude of the shear stress at ultimate load</i> 108; <i>No reinforcement crossing the interface</i> 109; <i>Reinforcement crossing the interface</i> 110; <i>Execution</i> 112; <i>Example of calculation</i> 112	106
6	Joints in architectural concrete	113
<b>5 WELDS, GLUED STEEL STRIPS, BEARING PADS</b>		
1	Welded connections <i>General remarks</i> 117; <i>Direct welding of protruding reinforcement</i> 118; <i>Indirect welding of protruding reinforcement with special steel components</i> 118; <i>Direct welding of steel elements provided in the concrete surface</i> 119; <i>Indirect welding of steel elements, anchored in the concrete structure, with special steel components</i> 119	117
2	Glued steel strips	120
3	Bearing pads <i>'Cold' support</i> 123; <i>Mortar joint used as a bearing pad</i> 123; <i>Steel bearings</i> 123; <i>Felt bearing pads</i> 124; <i>Lead</i> 124; <i>Plain elastomeric bearing pads</i> 125; <i>Elastomeric sandwich bearings</i> 125; <i>Bearing pads with teflon (P.T.F.E.)</i> 128; <i>Durability, maintenance, replaceability of bearing pads</i> 128	121
<b>6 CONNECTIONS BETWEEN VERTICAL ELEMENTS</b>		
1	A column to base or wall to base connection <i>Column: Reinforcing bars protruding from the foundation into vertical ducts in the bottom of the column</i> 129; <i>Wall: Reinforcing bars protruding from the foundation into ducts situated in the centre of the bottom part of the wall</i> 131; <i>Column: One dowel pin protruding from the foundation into a recess in the centre of the bottom of the column</i> 131; <i>Wall: Dowel pins protruding from the centre of the wall into recesses in the foundation</i> 132; <i>Column: Steel base plates on a mortar joint connected to the foundation and bolted to bars protruding from the foundation</i> 133; <i>Column placed in a box-shaped footing (foundation), termed socket connection</i> 134; <i>Wall (cladding panel) placed in a sleeve in the foundation</i> 137; <i>Column to base connection by prestressing</i> 137; <i>Wall to base connection by prestressing</i> 140	129

## VIII Table of contents

2	Vertical connection of two columns or two walls	140
	<i>Column to column connection with bars 140; Wall to wall connection, reinforcing bars 141; Column to column connection, one dowel pin 142; Wall to wall connection, dowel pins 142; Wall to wall connection with dowels 142; Wall to wall connection with a mortar joint only 143; Column to column connection by prestressing 143; Wall to wall connection by prestressing 144; Column to column connection by welding 144; Wall to wall connection by welding 145</i>	
3	Summary of relevant properties of the Connections VF	147
4	Summary of relevant properties of the Connections VV	147
7	<b>SIMPLY SUPPORTED CONNECTIONS BETWEEN HORIZONTAL AND VERTICAL ELEMENTS AND NON-LOAD-BEARING JOINTS</b>	
1	Beams on top of a column	148
	<i>Slab(s) on top of a wall 152; Two slabs on top of a wall 153</i>	
2	Beams with a tooth near the support on top of a column or on a corbel	156
	<i>Slab with a tooth near the support on top of a wall or on a corbel 158</i>	
3	Beams with or without a tooth supported on columns with corbels	159
	<i>Slabs supported on walls with ribs 162</i>	
4	Beams supported by mushroomlike corbels	162
	<i>Slabs supported by mushroomlike corbels 163; Four beams supported by one column 164</i>	
5	Beams supported by steel corbels	164
6	Welded connection of a beam to the support	166
	<i>Welded connection of a slab to the support 167; Welded connection of a TT-slab to the support 167</i>	
7	Non-load-bearing joints	167
8	Summary of relevant properties of the Connections FS	169
8	<b>RIGID CONNECTIONS BETWEEN TWO HORIZONTAL OR HORIZONTAL AND VERTICAL ELEMENTS</b>	
1	Rigid connection between two horizontal elements with a common axis	170
	<i>Rigid connection of two beams within their structural height to the reinforcement 170; Rigid connection of two slabs within their structural height to the reinforcement 174; Rigid connection of two beams by a reinforced concrete slab on top of the precast beams, concreted in situ 175; Rigid connection of two slabs by a reinforced concrete slab 175; Rigid connection of two beams within their structural height by prestressing 175</i>	
2	Connections between horizontal elements and main beams	177
	<i>Beams or slabs on top of the main beam or ledger beam rigidly connected to loops 178; Beams or slabs simply supported on top of main beams or ledger beams 180; Beams or slabs simply supported by bottom flanges or corbels on the main beams or ledger beams 181; Beams or slabs sup-</i>	

	<i>ported on corbels or bottom flanges and rigidly connected to the main beams or ledger beams 182; Composite structures 184</i>	
3	Rigid connections between horizontal and vertical elements <i>Beam on top of a column 186; Connection between a beam and two columns 187; Connection of a beam to the shaft of a column 187; Beams and columns 189; Beam to column connection by precasting 189; Slabs and walls 190</i>	186
4	Connections between horizontal elements and cores or shear walls <i>Beam free supporting on a corbel of the wall 191; TT-slabs free supporting on ribs of the wall 192; Hollow core slabs on ribs of a wall 193; Beam, free supporting in a recess of the wall 194; TT-slabs free supporting in a recess of the wall 194; Longitudinal joint between a TT-slab and a wall 196; Longitudinal connection between a hollow core slab and a wall 197; Precast concrete frame around a core 198</i>	190
9	STRUCTURAL SYSTEMS FOR BUILDINGS AND THE ASSOCIATED BUILDING REQUIREMENTS	
1	General remarks	199
2	Design and detailing <i>The system 199; Choice of elements 200; Connections 201; Facades – External walls 201</i>	199
3	Strength analysis of the structural components	202
4	Stability	202
5	Progressive collapse	203
6	Fire resistance <i>Concrete at elevated temperatures 206; Reinforcement 207; Prestressing steel 207; Practical evaluation of the fire resistance 209</i>	206
7	Renovation, demounting and demolition	211
10	SINGLE-STOREY BUILDING SYSTEMS	
1	General <i>Type of buildings 214; Functional requirements 214; The structure 214</i>	214
2	Systems of the precast structure <i>Structure S1 composed of columns, beams, TT-slabs 215; Structure S2 composed of columns, beams and roof elements 216; Structure S3 composed of loadbearing panels of architectural concrete in the facades and TT-slabs or hollow core slabs 218</i>	215
3	Modular coordination of the dimensions	220
4	Roof structures with supporting columns and the associated connections <i>Foundation 222; Columns 222; Roof beams 223; Supporting beams 226; Purlins 226</i>	221

X *Table of contents*

5	Roof slabs and wall elements with the associated connections	227
	<i>Roof slabs 227; Wall constructions and the associated connections 229</i>	
6	Other aspects	233
	<i>Fire resistance 233; Demountability 233; Expansion joints 234</i>	

11 MULTISTOREY BUILDINGS IN GENERAL

1	General	235
	<i>Type of buildings 235; Functional requirements 235; The structure 237; Design and detailing 237</i>	
2	Floor construction	238
	<i>General 238; TT-slabs 239; Hollow core slabs 241; Solid concrete slabs 247; Other floor constructions 248</i>	
3	Load distribution in floor constructions	248
	<i>Load distribution in floor constructions with a reinforced concrete topping 248; Load distribution in floor constructions consisting of TT-slabs without concrete topping 249; Load distribution in floor constructions with hollow core slabs without concrete topping 249</i>	
4	Diaphragm action of precast concrete floor constructions	251
	<i>General 251; Flow of forces in a diaphragm consisting of precast elements 252; Types of floor construction with precast elements 254; Longitudinal joints 261</i>	
5	Cores and shear walls	263
	<i>General 263; Stress distribution 263; Connections 265; Large panel constructions 267; Facade structure 267</i>	
6	Other aspects	268

12 INDUSTRIAL AND COMMERCIAL MULTISTOREY BUILDINGS

1	General	270
	<i>Type of buildings 270; Functional requirements 270; The structure 271</i>	
2	Systems of the precast structure	272
	<i>Structure S11 273; Structure S12 273; Cores and shear walls 274; Structure SP – Car-parks 274</i>	
3	Modular coordination	278
4	Vertical elements and the associated connections	279
	<i>Foundation 279; Columns 280; Special vertical structural elements 281; Cores 282; Shear walls 283</i>	
5	Horizontal elements and the associated connections	283
	<i>Beams 283; Floor construction-to-ledger beam connection 284; Floor construction-to-main beam connection 287; Floor construction-to-main beam-to-column connection 289; Floor construction-to-stabilizing core-to-shear wall connection 292</i>	
6	Other aspects	294

## 13 MULTISTOREY OFFICE AND APARTMENT BUILDINGS

1	General	295
	<i>Type of buildings 295; Functional requirements 295; The structure 296</i>	
2	Systems of the precast structure	297
	<i>Structure S21 297; Structure S22 297; Structure S23 298; Structure S24 299; Structure S25 301</i>	
3	Modular coordination	303
4	Vertical elements and the associated connections	303
	<i>Foundation 303; Columns 304; Wall panels 304; Loadbearing facade elements 306; Vertical joints between wall panels 307</i>	
5	Horizontal elements and the associated connections	307
	<i>Beams 307; Floor construction 307; Balconies 310</i>	
6	Other aspects	311

## 14 VIADUCTS AND BRIDGES

1	General	312
	<i>Type of bridges and viaducts 313; Functional requirements 315; Structures 315</i>	
2	Systems of precast deck structures for viaducts and bridges	317
	<i>B1 Solid slabs partly concreted in situ 317; B2 Beams with slabs concreted in situ on top 319; B3 Beams connected in transverse direction by prestressing 321; B4 Box girders constructed segmentally 324</i>	
3	Modular coordination	326
4	Standardization	327
	<i>Traffic loads 327; Dimensions of precast elements 329; Design of a precast concrete structure for bridges or viaducts 332</i>	
5	The longitudinal shape of the structure	334
	<i>General 334; Structures of expansion joints 336; Rigid connection above supports 341; Ground-plan 349</i>	
6	Cross-section of the bridge or the viaduct	352
	<i>General 352; Lateral load distribution 353; The bridge deck 354; Road surface 355; Diaphragms 355; Collision 357; Inclined road surface 358</i>	
7	Parapet, handrails, crash barriers etc.	360
	<i>Parapet beam 360; Handrails - Crash barriers 364; Discharge of rain water 365</i>	
8	Piers, abutments, bearings	366
	<i>General 366; Piers 368; Abutments 370</i>	
9	Segmental construction	370
	<i>General 370; The cross-section 370; The shape of the longitudinal profile of the structure 371; Match cast joint 371; External prestressing 372</i>
