

Finite Strip Analysis of Bridges

M.S. Cheung

*Director, Ottawa-Carleton Bridge Research Institute
and
Adjunct Professor,
Department of Civil Engineering,
University of Ottawa,
Ottawa, Canada*

W. Li

*Post-Doctoral Fellow,
Department of Civil Engineering,
University of Ottawa,
Ottawa, Canada,*

and

S.E. Chidiac

*Research Officer,
Structures Laboratory,
Institute for Research in Construction,
National Research Council Canada,
Ottawa, Canada*

E & FN SPON

An Imprint of Chapman & Hall

London · Weinheim · New York · Tokyo · Melbourne · Madras

Contents

Preface	xi
Notation	xiii
Part I Mathematical Approach	1
1 Introduction	3
1.1 Bridge analysis by refined methods	3
1.2 Development of the finite strip method	5
1.3 Reading suggestions	7
2 Basic concepts of numerical methods	9
2.1 Introduction	9
2.2 Problem formulation	10
2.3 Direct approach	13
2.4 Variational method	15
2.5 Weighted residual method	27
2.6 Finite element method	31
2.7 Convergence requirements for interpolation functions	32
2.8 Generalized procedure for a finite element solution	33
2.9 Finite strip method	36
3 Numerical errors	37
3.1 Introduction	37
3.2 Definition of computational errors	38
3.3 Assessing computational errors	39
3.4 Assessing discretization errors	41
3.5 Concluding remarks	49
Part II Finite Strip Method	51
4 Finite strip method	53
4.1 Introduction	53
4.2 Energy approach for a simple beam	54

4.3	Plate strip	56
4.4	Plane stress strip	69
4.5	Flat shell strip	75
4.6	Boundary conditions along nodal lines	78
4.7	Continuous structures: flexibility approach	80
4.8	Continuous structures: stiffness approach	81
4.9	Numerical examples	84
5	Higher order finite strips	91
5.1	Introduction	91
5.2	Plate strip HO2 with curvature continuity	91
5.3	Plate strip HO3 with an internal nodal line	93
5.4	Plane stress strip HO3	97
5.5	Flat shell strip HO3	99
5.6	Choice of approach	99
5.7	Numerical examples	99
6	Spline finite strip method	105
6.1	Introduction	105
6.2	Spline function interpolation	107
6.3	Flat shell spline finite strip	109
6.4	Analysis of arbitrarily shaped plates	112
7	Compound strip method	121
7.1	Introduction	121
7.2	Rectangular compound strip	122
7.3	Rectangular B-spline compound strip	126
7.4	Numerical examples	127
8	Finite layer method; finite prism method	133
8.1	Introduction	133
8.2	Finite layer method	134
8.3	Finite prism method	136
8.4	Circularly curved finite prism	141
8.5	Numerical examples	142
9	Vibration and stability analyses	149
9.1	Introduction	149
9.2	Vibration finite strip analysis	149
9.3	Mass matrix of a finite strip	150
9.4	Mass matrix of a plate strip	151
9.5	Mass matrix of a plane stress strip	152
9.6	Mass matrix of a flat shell strip	152
9.7	Bending and in-plane interaction	153

9.8	Stability analysis of plates	155
9.9	Stability analysis of thin-walled structures	155
9.10	Numerical examples	157
10	Nonlinear analysis	167
10.1	Introduction	167
10.2	Nonlinear solution procedure	167
10.3	Elastoplastic analysis	171
10.4	Analysis of reinforced concrete slabs	180
10.5	Geometrically nonlinear analysis	190
11	Combined analysis	203
11.1	Introduction	203
11.2	Combined FS/FE analysis of irregular plates	204
11.3	Combined FS/BE analysis of irregular plates	209
11.4	Combined BE/FS analysis of slab girder bridges	213
Part III	Finite Strip Analysis of Bridges	223
12	Slab and slab-on-girder bridges	225
12.1	Introduction	225
12.2	Stiffness matrix of a longitudinal beam	226
12.3	Deformation and settlement of support	228
12.4	Numerical examples	228
13	Curved and skewed bridges	241
13.1	Introduction	241
13.2	Circularly curved plate strip	241
13.3	Curved compound strip	244
13.4	Curved strip for box bridges	247
13.5	Skewed plate strip	250
13.6	Analysis of skewed box girder bridges	252
13.7	Numerical examples	252
14	Box girder bridges	263
14.1	Introduction	263
14.2	Elastic properties of constituent plates	264
14.3	Intermediate supports and diaphragm	266
14.4	Prestressing forces	270
14.5	Local bending moment	272
14.6	Numerical examples	273
15	Continuous haunched bridges	289
15.1	Introduction	289

15.2 Finite strip analysis	289
15.3 Spline finite strip analysis	296
15.4 Numerical examples	300
16 Cable-stayed bridges	307
16.1 Introduction	307
16.2 Girder substructure	308
16.3 Formulas for cables	309
16.4 Stiffness matrix for pylons	313
16.5 Initial-stiffness iteration	314
16.6 Numerical examples	315
17 Finite strip modeling of bridges	321
17.1 Introduction	321
17.2 Selecting approach and strip	321
17.3 Generating a finite strip model	322
17.4 Numbering nodal lines and strips	324
17.5 Input data file	324
17.6 Output file	326
References	329
Index	341
