CHAPTER II

Alkylthiophenes and Their Reactions

P. Cagniant, D. Cagniant, D. Paquer, and G. Kirsch

*Laboratoire de Carbochimie et Synthèse Organique,
Faculté des Sciences, Université de Metz,
Ile du Saulcy, 57045 Metz-Cédex, France*

I. Naturally Occurring Alkylthiophenes.	120
1. Alkylthiophenes from Carbonaceous Deposits	120
A. Lignites, Shales, Coals.	120
B. Petroleum Compounds (Crude Oils and Refined Products).	120
2. Alkylthiophenes from Plant and Animal Origin.	121
II. Synthesis of Alkylthiophenes	122
1. Methods Starting from Appropriate Acyclic Compounds	123
A. Alkylthiophenes from Dialkyl sulfides	123
B. Direct Sulfurization (H_2S , CS_2 , SO_2) of 1,4-Bifunctionalized Acyclic Compounds.	124
C. Heterocyclization of Aliphatic Hydrocarbons by H_2S	126
D. Heterocyclization of Functionalized Aliphatic Compounds by CS_2	128
E. Heterocyclization of Functionalized Aliphatic Compounds by P_4S_{10} and P_4S_7	128
F. Condensation of α,β -Ethylenic Ketones with Thioglycolic Esters or Acids.	129
2. Methods involving Alkylation of Thiophenes	130
3. Methods Starting from Functionalized Thiophenes (or Dihydro and Tetrahydro Thiophanes).	133
4. Methods Starting from Other Heterocyclic Systems	134
III. Spectroscopic Studies of Alkylthiophenes.	135
1. NMR Spectroscopy.	135
A. 1H NMR	135
B. ^{13}C NMR	137
C. Various NMR Studies.	140
D. Correlation of NMR Shifts of Thiophenes with Various Parameters.	142
E. Conclusion	143
2. Mass Spectroscopy	143
3. IR and UV Spectroscopy	146
4. Notes.	146
IV. Side-Chain Reactivity of Alkylthiophenes	146
1. Thermal and Photochemical Reactivities of Alkylthiophenes.	146
2. Side-Chain Oxidation of Alkylthiophenes.	147
3. Side-Chain Halogenation.	149
4. Preparation of Nitriles from Alkylthiophenes.	149
References.	149

CHAPTER III

Halothiophenes

Manfred G. Reinecke and Peter Pedaja

Department of Chemistry, Texas Christian University, Fort Worth, Texas

I. Preparation	161
1. Fluorothiophenes	161
A. From Thienyllithium Derivatives	161
B. From Polyfluorothiolanes and Thiolenes	164
C. Other Methods	167
2. Chlorothiophenes	168
A. Chlorination	168
B. From Chlorothiolanes and Thiolenes	182
C. From Thienyllithium Derivatives	185
D. By Nucleophilic Substitution	186
E. By Ring Closure	189
F. Other Methods	192
3. Bromothiophenes	193
A. Bromination	194
B. From Organometallics	227
C. Nucleophilic and Radical Substitution	231
D. Ring Closure and Ring Contraction	233
E. Bromine Rearrangements	234
F. Debromination and Other Methods	239
4. Iodothiophenes	246
A. Iodination	246
B. From Organometallics	250
C. Iodine Rearrangements	255
D. Deiodination and Other Methods	256
5. Thienyliodonium Salts	257
A. From Thiophene	258
B. From Thienyllithium Compounds	260
II. Reactions	261
1. Electrophiles	262
A. Protonation	264
B. Nitration	271
C. Sulfonation and Chlorosulfonation	282
D. Halogenation	285
E. Alkylation	286
F. Acylation and Formylation	291
G. Other Electrophiles	303
2. Nucleophiles	305
A. Oxygen Nucleophiles	310
B. Nitrogen Nucleophiles	319

C. Sulfur Nucleophiles	335
D. Carbon Nucleophiles	342
E. Other Nucleophiles	347
3. Radicals	349
4. Metals	351
A. Alkali Metals	351
B. Magnesium	353
C. Zinc	359
D. Copper	363
E. Other Metals	370
5. Salts, Complexes, and Organometallics	372
A. Organolithium Compounds	372
B. Organomagnesium Compounds	400
C. Organocopper Compounds	405
D. Organozinc Compounds	408
E. Nickel Complexes	409
F. Palladium Complexes	409
G. Other Organometallics	416
6. Reducing Agents	417
A. Hydrogen	417
B. Metal Hydrides	419
C. Electrochemical Reductions	420
D. Miscellaneous	426
7. Oxidizing Agents	428
8. Photochemistry	428
9. Thermolysis, Radiolysis, and Ultrasound	433
10. Dienes	436
11. 1,3-Dipoles (TCNEO)	437
12. Carbenes and Nitrenes	439
13. Dienophiles	444
III. Properties	446
1. Molecular Structure	447
2. Dipole Moments	447
3. Infrared Spectra	449
4. Nuclear Magnetic Resonance	449
A. Proton NMR	452
B. ^{13}C NMR	463
C. ^{19}F NMR	463
D. ^{33}S NMR	468
5. Nuclear Quadrupole Resonance	468
6. Electronic Spectra	468
A. Photoelectron Spectra	468
B. Ultraviolet Spectra	469
7. Mass Spectra	470
8. Gas Chromatography	473
IV. Reference Tables to Preparations and Physical Properties of Halothiophenes	475
III.78. Fluorothiophenes	476
III.79. Chlorothiophenes	477
III.80. Bromothiophenes	480
III.81. Iodothiophenes	485
III.82. Mixed Halothiophenes	488
III.83. Arylalkane Derivatives of Halothiophenes	491

CHAPTER IV

Nitrothiophenes And Their Reactions

ROBERT K. NORRIS

Department of Organic Chemistry, The University of Sydney, N.S.W., 2006 Australia

I. Preparation of Nitrothiophenes	524
1. Introduction	524
2. Nitration of Thiophenes	524
A. General Aspects	524
B. Nitration of Thiophene and 2- and 3-Nitrothiophene	527
C. Nitration of 2-Substituted Thiophenes	528
D. Nitration of 3-Substituted Thiophenes	534
E. Orientation, Reactivity, and Ipso Attack in Di-, Tri-, and Tetrasubstituted Thiophenes	537
F. Nitration and Nitrodecarboxylation of Thiophenecarboxylic Acids	551
3. Preparation of Nitrothiophenes by Cyclization and Ring- Contraction Reactions	554
A. Cyclization Reactions	554
B. Ring-Contraction Reactions	558
4. Other Methods for Direct Introduction of Nitro Groups	558
A. Diazonium Ion Reactions	558
B. Iodonium Ion Reactions	559
5. Miscellaneous Preparations of Nitrothiophenes	560
A. Syntheses involving Decarboxylation or Desulfonation Reactions	560
B. Syntheses involving Dehalogenations	562
II. Reactions of Nitrothiophenes	563
1. Electrophilic Substitution	563
A. 2- and 3-Nitrothiophene	563
B. Other Substituted Nitro- and Dinitrothiophenes	565
2. Nucleophilic Attack on Nitrothiophenes	566
A. Formation of Meisenheimer Complexes	566
B. Nucleophilic Aromatic Substitution (S_NAr) Reactions	570
C. <i>cine</i> -Substitution and Ring-Opening Reactions of Nitrothiophenes	581
D. Nucleophilic Attack on Side Chains of Substituted Nitrothiophenes	582
3. Radical Reactions of Nitrothiophenes	584
A. Free-Radical Substitution Reactions	584
B. Miscellaneous Radical Reactions	585
4. Activation of Side Chains and Functional Groups by Nuclear Nitro Groups	586
A. General	586
B. Condensation and Related Reactions involving Deprotonation of Nitrothiophenes	586
5. Reduction of Nitrothiophenes	588
A. Formation of Amines and Their Derivatives	588

CHAPTER V

Aminothiophenes and Their Derivatives

ROBERT K. NORRIS

Department of Organic Chemistry, The University of Sydney, N.S.W., 2006 Australia

I. Preparation of Aminothiophenes	633
1. Introduction	633
2. Introduction and Reduction of Nitrogen-Containing Side Chains	633
3. Conversion of Acylthiophenes and Derivatives of Thiophenecarboxylic Acids into Aminothiophenes	634
A. Beckmann Rearrangement	634
B. Curtius Rearrangement	636
C. Schmidt Reaction	638
D. Hofmann Reaction	638
4. Amination of Oxotetrahydrothiophenes Followed by Aromatization	638
5. Nucleophilic Displacement of Substituents by Ammonia and Amines	639
A. Reaction of Mercapto-, Hydroxy-, and Aminothiophenes	639
B. Reaction of Unactivated Halothiophenes with Amino Compounds	640
C. Reaction of Activated Halothiophenes with Ammonia and Amines	641
D. Displacement of Other Groups by Amino Functions on Activated Thiophene Rings	642
6. Formation of Aminothiophenes by Ring-Closure Reactions	644
A. Preparation of 2-Aminothiophenes	644
B. Preparation of 3-Aminothiophenes	655
C. Preparation of 2,4-Diaminothiophenes	658
D. Preparation of 2,5-Diaminothiophenes	659
E. Preparation of 3,4-Diaminothiophenes	660
7. Preparation of Aminothiophenes from Other Ring Systems	661
8. Miscellaneous Formation of Aminothiophenes	664
II. Stability, Tautomerism, and Protonation of Aminothiophenes	665
1. Stability of Aminothiophenes and Their Derivatives	665
2. Tautomerism in Aminothiophenes	666
3. Protonation of Aminothiophenes	667
III. Conversion of Aminothiophenes into Thiophenediazonium Ions and Subsequent Reactions	669
1. Diazotization of Aminothiophenes	669
A. 2-Aminothiophenes	669
B. 3-Aminothiophenes	670
C. Diaminothiophenes	671
2. Coupling Reactions of Thiophenediazonium Ions	671
3. Dediazonation Reactions	675
4. Reduction of Thiophenediazonium Ions to Thienylhydrazines	676
5. Replacement of the Diazonium Group by Other Substituents	676
IV. Reaction at Nitrogen in Aminothiophenes and Their Derivatives	677
1. Substitution Reactions at sp^3C Electrophilic Sites	677
A. Alkylation on Nitrogen	677

B. Reaction with Ortho Esters	680
2. Attack of Nitrogen on sp^2 C Electrophilic Sites	681
A. Reaction with C=C Systems	681
B. Condensation Reactions with Aldehydes and Ketones	683
C. Acylation Reactions.	687
D. Substitution Reactions on Aromatic Rings.	698
3. Attack of Nitrogen on sp^3 C Electrophilic Sites	698
A. Nucleophilic Addition to C=C Systems.	698
B. Nucleophilic Addition to C≡N.	700
C. Reaction with Isocyanates and Isothiocyanates	702
D. Reaction with Carbon Disulfide and Related Compounds	702
4. Miscellaneous Reactions with Carbon Centers	705
5. Attack of Nitrogen on Electrophilic Sulfur	705
A. Sulfonylation Reactions	705
B. Attack on Sulfur Chlorides.	706
C. Oxidative Cyclization of <i>ortho</i> -Amino Thioamides	707
6. Attack on Electrophilic Centers Other than Carbon and Sulfur.	707
A. Nitrogen	707
B. Boron	707
C. Phosphorus.	708
D. Silicon	708
V. Ring-Carbon Reactivity in Aminothiophenes and Their Derivatives	709
1. Reactivity toward Electrophilic Reagents	709
A. Nitrosation	710
B. Nitration	710
C. Sulfonation.	711
D. Coupling with Diazonium Salts	712
E. Halogenation.	713
F. Mercuriation	715
G. Acylation.	716
H. Aminoalkylation.	719
I. Reaction with Other Carbon Electrophiles.	719
J. Reaction with Electrophilic Sulfur and Selenium Reagents	721
2. Reactivity toward Nucleophilic Reagents	722
3. Free Radical Reactions	724
4. Metalation Reactions.	724
5. Enamine Reactivity and Cycloaddition Reactions	725
6. Ring-Opening Reactions	727
7. Decarboxylation of Aminothiophenecarboxylic Acids and Derivatives	729
VI. Miscellaneous Preparations and Reactions of Derivatives of Aminothiophenes	731
1. Thienylcarbamic Esters, Thienyl Ureas, and Their Sulfur Analog.	731
2. Thienylhydroxylamines and Thienylhydrazines	732
3. Azothiophenes	734
VII. Spectroscopic and Physicochemical Properties	734
1. Molecular Orbital Calculations	734
2. Ultraviolet and Visible Spectroscopy.	735
3. Infrared Spectroscopy	736
4. Nuclear Magnetic Resonance Spectroscopy	736
A. ^1H NMR Spectroscopy	736
B. ^{13}C NMR Spectroscopy	738
5. Mass Spectroscopy	738
VIII. Tables of Compounds	740
