
Economics of Worldwide Stagflation

MICHAEL BRUNO AND JEFFREY D. SACHS

Basil Blackwell

Contents

INTRODUCTION 1

- The critique of demand management policies 4
- Adding aggregate supply to the macroeconomic model 6
- A look at supply and demand factors in the stagflationary era 8
- Related studies 12
- Plan of the book 14

1 ELEMENTS OF A THEORY 16

- Factor prices and production response 16
- Savings, investment, and international capital flows 23
- Supply shocks and demand management 26
- Real wage gaps and the characterization of unemployment trade-offs 29
- Policy coordination among countries 31

2 PRODUCTION, TECHNOLOGY, AND THE FACTOR PRICE FRONTIER 35

- The production function 35
- The factor price frontier 39
- Material inputs and the analogy of productivity change 42
- The FPF in the three-factor case 44
- Change in terms of trade and demand rationing 47
- Appendix 2A: Empirical factor-price profiles in manufacturing 48
- Appendix 2B: Product measurement 57

3	FACTOR ADJUSTMENT TO SUPPLY PRICE SHOCKS	59
	Analysis in terms of the factor price frontier	59
	Changes in labor demand and output supply	61
	Analysis in terms of the two-level CES function	64
	Some simple dynamics	65
	Appendix 3A: General derivation of input demand and output supply functions	68
4	SAVINGS, INVESTMENT, AND CAPITAL FLOWS	70
	Production, investment, and the balance of payments	70
	Firm behavior	72
	Household consumption and savings behavior	73
	Temporary and permanent input price shocks	74
	Welfare analysis	76
	Wages, prices, and monetary policy	77
	Determination of the real interest rate in a multicountry world	79
	The differential response of ICs and MICs	84
5	STAGFLATION AND SHORT-RUN ADJUSTMENT	88
	The commodity market	89
	The labor market	95
	General equilibrium	98
	Appendix 5A: The detailed model	101
6	MACROECONOMIC ADJUSTMENT AND POLICY COORDINATION IN A GLOBAL SETTING	109
	A "world" model with one <i>N</i> -importing region	110
	A world model with two oil-importing economies	115
	The role for policy coordination after a supply shock	121
	Conclusions	127
	Appendix 6A: The detailed models	128
7	SIMULATION MODELS	133
	The semitractable model in an infinite horizon	134
	The one-country disequilibrium model	144
	Appendix 7A: Notation used in this chapter	152

8	EMPIRICAL OVERVIEW OF STAGFLATION IN THE OECD	154
	Supply and demand factors in the stagflation	157
	Sorting out the roles of supply and demand variables	171
	Summary and conclusions	176
9	REAL WAGES AND UNEMPLOYMENT	178
	Measurement of the wage gap	178
	The wage gap and unemployment	183
	The dynamics of the wage gap	187
	Some theoretical explanations of slow wage adjustment	188
10	PRICE AND OUTPUT DYNAMICS IN EIGHT ECONOMIES	198
	Inflation equations for the 1970s	199
	Unemployment equations for the 1970s	208
	Conclusions	216
11	LABOR MARKETS AND COMPARATIVE MACROECONOMIC PERFORMANCE	217
	Measuring macroeconomic performance	219
	An international comparison of wage-setting institutions	221
	Conclusions	241
	Appendix 11A: Wage-setting institutions for twelve countries	242
12	SUPPLY SHOCKS, DEMAND RESPONSE, AND THE PRODUCTIVITY PUZZLE	248
	Input substitution, demand, and the productivity slowdown	252
	Value-added measures of productivity growth and resource utilization	258
	Explaining the links of unemployment and trend productivity growth	265
	Comparing OECD and the MICs	268
13	LESSONS FOR THEORY AND POLICY	273
	NOTES	283
	BIBLIOGRAPHY	297
	INDEX	311
