Arbitrage Pricing of Contingent Claims

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek

Inv.-Nr. B 20593

Springer-Verlag
Berlin Heidelberg New York Tokyo

CONTENTS

1	Introduction	1
2	The Valuation of Contingent Claims: A Survey	6
3	Existence of Consistent Price Systems	16
3.1	The basic model	16
3.2	Arbitrage and equivalent martingale measures	21
3.3	Examples	25
3.3.1	Geometric Brownian motion	25
3.3.2	A process with a random variance	26
3.3.3	Geometric Poisson process	28
4	The Continuous-time Trading Model	29
4.1	Continuous-time self-financing trading strategies	30
4.2	A characterization of P^* -attainable contingent claims	48
4.3	Classes of P^* -attainable contingent claims for specific security price processes	60
4.3.1	Geometric Brownian motion	60
4.3.2	A process with a random variance	63
4.3.3	Geometric Poisson process	72
4.4	The relationship between P^* -attainable contingent claims and solutions of associated difference-differential equations	74
4.5	Complete securities market models	80
4.6	Counterexamples	82
5	Extensions of the BLACK/SCHOLES Model	89
5.1	Determination of an equivalent martingale measure	90
5.2	The relationship between the original and the discounted model	94
5.3	Completeness and the determination of self-financing trading strategies in the case of a European call option	99
5.4	Completeness and the relaxation of assumptions	108
5.5	Incompleteness caused by variations of assumptions	109

6	From Preference-free to Preference-dependent Valuations of Contingent Claims: the Hedge Approach in Incomplete Models	111
7	Conclusion	124
