

Jure Zupan and Johann Gasteiger

Neural Networks for Chemists

An Introduction

Weinheim · New York · Basel · Cambridge · Tokyo

Contents

Part I Basic Concepts

- 1 Defining the Area 3
 - 1.1 Learning from Information 3
 - 1.2 General Objectives and Concepts 4
 - 1.3 What Neural Networks are Good for 5
 - 1.4 Notation, Conventions and Abbreviations 7

- 2 Neuron 9
 - 2.1 Synapses and Input Signals 9
 - 2.2 Weights 11
 - 2.3 Linear Learning Machine 13
 - 2.4 Transfer Functions in Neurons 20
 - 2.5 Bias 29
 - 2.6 Graphical Representation of Artificial Neurons 34
 - 2.7 Essentials 35
 - 2.8 References and Suggested Readings 36

- 3 Linking Neurons into Networks 37
 - 3.1 General 37
 - 3.2 One Layer 39
 - 3.3 Input 42
 - 3.4 Architectures 44
 - 3.5 Hidden Layer; Output Layer 44
 - 3.6 Graphical Representation of Neural Networks 45
 - 3.7 Essentials 49
 - 3.8 References and Suggested Readings 50

Part II One-Layer Networks

4 Hopfield Network 53

- 4.1 General 53
- 4.2 Architecture 54
- 4.3 Transfer Function 54
- 4.4 Weight Matrix 55
- 4.5 Iteration 58
- 4.6 Capacity of Hopfield Network 60
- 4.7 Essentials 62
- 4.8 References and Suggested Readings 63

5 Adaptive Bidirectional Associative Memory (ABAM) 65

- 5.1 Unsupervised and Supervised Learning 65
- 5.2 General 67
- 5.3 ABAM Network 68
- 5.4 Learning Procedure 69
- 5.5 An Example 71
- 5.6 Significance of the Example 74
- 5.7 Essentials 77
- 5.8 References and Suggested Readings 78

6 Kohonen Network 79

- 6.1 General 79
- 6.2 Architecture 80
- 6.3 Competitive Learning 83
- 6.4 Mapping from Three to Two Dimensions 87
- 6.5 Another Example 91
- 6.6 Remarks 92
- 6.7 Essentials 94
- 6.8 References and Suggested Readings 95

Part III Multilayer Networks

7 Counter-Propagation 99

- 7.1 Transition from One to Two Layers 99
- 7.2 Lookup Table 100
- 7.3 Architecture 102
- 7.4 Supervised Competitive Learning 103
- 7.5 Learning to Play Tennis 108
- 7.6 Correlations Among the Variables 113
- 7.7 Essentials 116
- 7.8 References and Suggested Readings 118

8 Back-Propagation of Errors 119

- 8.1 General 119
- 8.2 Architecture 121
- 8.3 Learning by Back-Propagation 122
- 8.4 The Generalized Delta-Rule 124
- 8.5 Learning Algorithm 131
- 8.6 Example: Tennis Match 135
 - 8.6.1 Choice of Data 136
 - 8.6.2 Architecture and Parameters of the Network 138
 - 8.6.3 Number of Neurons in the Hidden Layer: Overtraining 141
- 8.7 Essentials 146
- 8.8 References and Suggested Readings 148

Part IV Applications

9 General Comments on Chemical Applications 151

- 9.1 Introduction 151
- 9.2 Classification 154
- 9.3 Modeling 155
- 9.4 Mapping 157
- 9.5 Associations; Moving Window 158
- 9.6 Overview of the Examples in Chapters 10 to 19 160
- 9.7 Essentials 164
- 9.8 References and Suggested Readings 165

10 Clustering of Multi-Component Analytical Data for Olive Oils 167

- 10.1 The Problem 167
- 10.2 The Data 168
- 10.3 Preliminary Exploration of Possible Networks 170
- 10.4 Learning to Make Predictions 174
- 10.5 Concluding Remarks 180
- 10.6 References and Suggested Readings 181

11 The Reactivity of Chemical Bonds 183

- 11.1 The Problem and the Data 183
- 11.2 Architecture of the Network for Back-Propagation Learning 185
- 11.3 Using an Experimental Design Technique to Select the Training Set 186
- 11.4 Application of the Kohonen Learning 190
- 11.5 Application of the Trained Multilayer Network 191
- 11.6 Chemical Significance of the Kohonen Map 193
- 11.7 References and Suggested Readings 196

12 HPLC Optimization of Wine

Analysis 197

- 12.1 The Problem of Modeling 197
- 12.2 Modeling the Mobile Phase for HPLC by a Standard Method 198
- 12.3 Modeling the Mobile Phase for HPLC by a Neural Network 200
- 12.4 Comparison of Two Networks with Identical Architectures 201
- 12.5 References and Suggested Readings 203

13 Quantitative Structure-Activity

Relationships 205

- 13.1 The Problem 205
- 13.2 Dataset 206
- 13.3 Architecture and Learning Procedure 207
- 13.4 Prospects of the Method 208
- 13.5 References and Suggested Readings 210

14 The Electrophilic Aromatic

Substitution Reaction 211

- 14.1 The Problem 211
- 14.2 The Data 212
- 14.3 The Network 213
- 14.4 Learning and Results 214
- 14.5 A Third Representation of Data 216
- 14.6 Concluding Remarks 219
- 14.7 References and Suggested Readings 220

15 Modeling and Optimizing a Recipe for a Paint Coating 221

- 15.1 The Problem 221
- 15.2 The Data 222
- 15.3 The Network and Training 223
- 15.4 The Models 224
- 15.5 References and Suggested Readings 227

16 Fault Detection and Process Control 229

- 16.1 The Problems 229
- 16.2 The Data 231
- 16.3 The Methods 234
- 16.4 Predictions of Faults 235
- 16.5 Modeling and Controlling a Continuously Stirred Tank Reactor (CSTR) 237
- 16.6 References and Suggested Readings 250

17 Secondary Structure of Proteins 253

- 17.1 The Problem 253
- 17.2 Representation of Amino Acids as Input Data 255
- 17.3 Architecture of the Network 257
- 17.4 Learning and Prediction 258
- 17.5 References and Suggested Readings 259

18 Infrared Spectrum-Structure Correlation 261

- 18.1 The Problem 261
- 18.2 The Representation of Infrared Spectra as Intensities 262
- 18.3 The Dataset, and Learning by Back-Propagation 263
- 18.4 Adjustable Representation of an Infrared Spectrum 265
- 18.5 Representing Spectra using Truncated Sets of Fourier or Hadamard Coefficients 266
- 18.6 Results of Kohonen Learning 268
- 18.7 References and Suggested Readings 274

19 Nonlinear Projection of Molecular
Electrostatic Potentials 277

19.1 The Problem 277

19.2 The Network Architecture and Training 280

19.3 Tiling with Kohonen Maps; Conformational Effects 282

19.4 Investigation of Receptors of Biological Neural Networks 285

19.5 References and Suggested Readings 291

20 Prospects of Neural Networks for
Chemical Applications 293
