contents

preface	ix
chapter 1 an introduction to forecasting	1
what is forecasting? 1 characteristics of forecasts 2 how to make forecasting successful 4 purpose and overview of the book 6	
chapter 2 the essential materials of forecasting	9
introduction 9 a forecasting program 9 sources of information for forecasting 11 data bases for forecasting 16 product group forecasts and item forecasts 16 questions 18	
chapter 3 the choice of appropriate techniques for implementing a forecasting strategy	19
introduction <i>19</i> formulating a forecasting strategy <i>20</i>	

•

.

.

139

underlying patterns in historical data 22 evaluating and utilizing forecasting error 23 how to choose the right forecasting technique 30 questions 57

chapter 4 . . . forecasting based on regression techniques 59

introduction 59 assumptions of regression 60 the correct use of regression for forecasting 61 simple linear regression 65 multiple linear regression 72 nonlinear regression 79 auestions 79

chapter 5 . . . moving averages and exponential smoothing 83

introduction 83 simple moving averages 85 double moving averages 88 fundamental exponential smoothing .91 double exponential smoothing 94 triple exponential smoothing 95 developing initial estimates for moving averages and exponential smoothing 96 winters' method 99 choosing a smoothing constant 104 a computer program for making forecasts with techniques described in chapters 4 and 5 108 137 auestions

chapter 6 . . . the use of subjective information in forecasting

introduction 139 the delphi method 140 the use of the delphi procedure in manpower forecasting 143 subjective probability methods 152 the cross-impact method 164 an application of the cross-impact method 172 questions 189

contents	vii
chapter 7 technological forecasting	-191
introduction 191 applications of technological forecasting 193 description of technological forecasting techniques 194 technological forecasting in the chemical process industries 202 guestions 218	
chapter 8 advanced forecasting techniques	221
introduction 221 adaptive filtering 221 the box-jenkins method 223 econometric models 226 input-output tables 227 forecasting in the future 228 questions 229	
appendix a a manager's primer on forecasting	231
appendix b tests for serial correlation in regression analysis	249
introduction 249 von-neuman ratio test 250 durbin-watson test 251	
appendix c , statistical tests for regression methods	261
appendix d forecasting high consequence, low probability events	269
introduction 269 bayes' law 270 a procedure for event forecasting based on bayes' law 278	
index	289
