

Papers presented
at the second
Australasian
Conference
of Econometricians
held at
Monash University,
9-13 August 1971

edited by

ALAN A. POWELL
*Professor of Econometrics
Monash University*

and

ROSS A. WILLIAMS
*Senior Lecturer in Economics
Monash University*

1973

Econometric Studies of Macro and Monetary Relations

NORTH-HOLLAND PUBLISHING COMPANY
AMSTERDAM • LONDON
AMERICAN ELSEVIER PUBLISHING CO., INC.
NEW YORK

CONTENTS

Preface

v

PART 1: MACROECONOMETRICS

L.R. Klein: The treatment of undersized samples in econometrics	3
1. The degrees of freedom problem	3
2. Ways of coping with undersized samples	12
3. Some practical problems	21
John Helliwell, Fred Gorbet, Ian Stewart and Don Stephenson: Some features and uses of the Canadian quarterly model RDX2	27
1. Introduction	27
2. Aggregate supply and demand, derived factor demands, and some adjustment mechanisms	29
3. Government sector behaviour	34
4. International linkages	37
5. The financial sector	38
6. Simulation contexts for RDX2	39
7. Example issues for simulation studies	43
8. Linked simulations	45
W.E. Norton and J.F. Henderson: The structure of a model of the Australian economy	49
1. Introduction	49
2. Features of RBA1	50
3. The structural equations	53
4. Some limitations	66
Appendix 1: The equations of RBA1	67
Appendix 2: Notation	77
R.S. Deane: Macroeconometric relationships within New Zealand: a preliminary examination	85
1. Introduction	85
2. Empirical considerations	87
3. Equation specification	89
4. Simulation	100
5. Conclusion	101
Appendix 1: Equations and identities	102
Appendix 2: Notation	110

C.I. Higgins: A wage-price sector for a quarterly Australian model	115
1. Scope of the study	115
2. Award wages and earnings	117
3. Prices	126
4. Simulations of the wage-price sector in the macro-economy	135
Appendix: National income forecasting model with wage-price sector incorporated, July 1971	140
Arnold Zellner and Stephen C. Peck: Simulation experiments with a quarterly macroeconomic model of the U.S. economy	149
1. Introduction	149
2. Brief overview of the model	153
3. Linearity and symmetry experiments	154
4. Major depression experiments	163
5. Summary and conclusions	167
V.W. FitzGerald: Dynamic properties of a non-linear econometric model	169
1. Introduction	169
2. Linear models	172
3. Procedures for non-linear models	179
4. The experiments	183
Eric R. Sowe: Stochastic simulation of macroeconomic models: methodology and interpretation	195
Part 1. Stochastic simulation: a discussion on methodology	195
1. Validation by simulation	195
2. Simulation categories	198
3. The significance of stochastic simulation	202
4. Evaluating simulations	205
5. Experiences with stochastic simulation in macroeconometrics	213
6. Summary	214
Part 2. Stochastic simulation of the Reserve Bank model: RBA1	215
7. Introductory	215
8. Simulation procedure	216
9. Simulation results for validating RBA1	218
10. Sources of numerical inaccuracy	225
11. Conclusion	227

PART 2: MONETARY SECTOR MODELS

L. McGregor and A.A. Walters: Real balances and output: a productivity model of a monetary economy	233
1. Introduction	233
2. The productivity of money	234
3. The model	239
4. Behaviour of the model	251
5. Quantitative considerations	255

John Helliwell, Gordon Sparks and Jack Frisch: The supply price of capital in macroeconomic models	261
1. Introduction	261
2. The concept of the supply price of capital	262
3. Estimation of the supply price of capital using Canadian data	267
4. Estimation of the supply price of capital using Australian data	270
5. Some roles for the supply price of capital	275
6. Further developments	281
Robert Crouch: A new approach to the monetisation of neoclassical growth models	285
1. The neoclassical barter model bench-mark	286
2. The monetary arrangements	288
3. Monetisation as a technological innovation	291
4. The neutrality of money	295
5. Monetisation as a technological innovation continued	298
C.R. Wymer: A continuous disequilibrium model of United Kingdom financial markets	301
1. Introduction	301
2. Dynamic models of financial markets	302
3. A model of the United Kingdom financial markets	306
4. Estimates of the model and its economic significance	319
Richard Zecher: Short-run monetary adjustments in the Australian economy, 1952-70	335
1. The model	337
2. Two periods in recent Australian experience	341
3. The demand for money	342
4. Effects of money on income	345
5. Conclusions	345
