
Closed-Face Tunnelling Machines and Ground Stability

A guideline for best practice

British Tunnelling Society
in association with the
Institution of Civil Engineers

ULB Darmstadt

<i>Acknowledgements</i>	vii
<i>Preface</i>	ix
<i>List of illustrations</i>	xi
1 Introduction	1
2 Technology of closed-face tunnelling machines	2
2.1 Machine types	2
2.2 Cutterhead and cutters	4
2.3 Spoil conditioning	4
2.4 Dealing with boulders	6
2.5 Screw conveyor design	6
2.6 TBM articulation	6
2.7 Seal systems	6
2.8 Tail seals	6
2.9 Control systems	6
2.10 Improved general reliability	7
2.11 Future development	7
3 Choosing between earth pressure balance machines (EPBMs) and slurry tunnelling machines (STMs)	9
3.1 Review of ground types	9
3.2 Selection criteria	11
4 Incident data	15
4.1 Introduction	15
4.2 Analysis	15
4.3 Summary	16
5 Hazards associated with urban tunnelling	19
5.1 Historical land use issues	19
5.2 Physical constraints on the works	19
5.3 Ground movements and environmental disturbance due to tunnelling	20
5.4 Management of hazards associated with urban tunnelling	21
6 Use of risk management	22
6.1 Identification	22
6.2 Assessment	22
6.3 Risk response	22
6.4 Embed and review	23
7 Review of site investigation methods	24
7.1 Site investigation generally	24
7.2 Relevant risks	24
7.3 Site investigation techniques	25
8 Tunnelling process – construction	29
8.1 Personnel	29
8.2 Management process	29

8.3	Excavation	30
8.4	Spoil conditioning	30
8.5	Operating pressures	34
8.6	Torque and thrust	37
8.7	Filling the shield body annulus	39
8.8	Ring build	39
8.9	Annular grouting	41
9	Tunnelling process – monitoring, recording and reviewing	44
9.1	Trained and skilled personnel	44
9.2	TBM operating parameters	44
9.3	Excavation spoil records	46
9.4	Ring build records	49
9.5	Annular grouting records	49
9.6	Ground and structure monitoring	49
9.7	Monitoring review and reconciliation	50
9.8	Overall monitoring and control	50
10	Conclusions and recommendations	54
Appendix A	Examples of engineering, technical hazards associated with urban tunnelling	58
Appendix B	Potential roles of geophysics in closed-face urban tunnelling	60
Appendix C	Glossary of terms	67
Appendix D	Risk register sheet	70
