# HANDBOOK OF MATHEMATICAL ECONOMICS

VOLUME IV

*Edited by*

**WERNER HILDENBRAND**

*University of Bonn*

and

**HUGO SONNENSCHIN**

*University of Pennsylvania*

1991

**NORTH-HOLLAND**  
**AMSTERDAM • NEW YORK • OXFORD • TOKYO**

## CONTENTS OF VOLUME IV

Introduction to the Series	v
Contents of the Handbook	vii
Preface to the Handbook	xiii
Introduction to Volume IV	xv

### *Chapter 30*

#### Incomplete Markets

MICHAEL MAGILL and WAYNE SHAFER	1523
1. Introduction	1524
2. Real assets	1527
2.1. Two period exchange economy	1527
2.2. Generically complete markets	1539
2.3. Incomplete markets	1547
2.4. Stochastic exchange economy	1557
3. Nominal assets	1565
3.1. Indeterminacy of GEI equilibrium with nominal assets	1567
3.2. Monetary equilibrium and real effects of money	1573
4. Production and the stock market	1576
5. Efficiency properties of markets	1590
5.1. Inefficiency in exchange	1590
5.2. Inefficiency in production	1601
6. Concluding remarks	1607
6.1. Interface with finance	1607
6.2. Secondary assets	1607
6.3. Endogenous asset formation	1608
6.4. Bankruptcy	1609
6.5. Alternative approaches to firm behavior	1609
References	1610

### *Chapter 31*

#### The Theory of Value in Security Markets

DARRELL DUFFIE	1615
1. Introduction	1617
2. Early milestones	1618
2.1. Arrow's "Role of Securities" paper	1618

2.2.	Modigliani–Miller’s irrelevance of corporate financial structure	1620
2.3.	The capital asset pricing model	1622
3.	<b>Basic asset pricing techniques</b>	1625
3.1.	Arbitrage pricing	1625
3.2.	Representative-agent pricing	1627
3.3.	Recursive representative-agent pricing	1629
3.4.	Extended recursive preference models and time consistency	1631
4.	<b>Continuous-time equilibrium in security markets</b>	1633
4.1.	General equilibrium in continuous-time	1633
4.2.	The dynamic spanning condition and Girsanov’s Theorem	1637
4.3.	The representative-agent asset pricing formula	1639
4.4.	The consumption-based CAPM	1642
5.	<b>Continuous-time derivative asset pricing</b>	1646
5.1.	Prologue	1646
5.2.	The setup	1647
5.3.	Arbitrage and self-financing strategies	1648
5.4.	The arbitrage pricing functional	1649
5.5.	Numeraire-invariance	1650
5.6.	Equivalent martingale measure	1650
5.7.	Alternate sufficient conditions for equivalent martingale measures	1653
5.8.	Equivalent martingale measure and the state price process	1654
5.9.	Arbitrage pricing of redundant securities	1655
5.10.	The Brownian case: spanning and Girsanov’s Theorem	1656
5.11.	The Markov case: the PDE for derivative asset prices	1659
5.12.	Approximate solution of the arbitrage PDE	1664
5.13.	Extensions of the PDE method	1665
6.	<b>Further reading</b>	1665
6.1.	General references	1665
6.2.	Finite-dimensional general equilibrium in security markets	1666
6.3.	Spanning and the behavior of the firm	1666
6.4.	Mutual funds and factors in asset prices	1667
6.5.	Asymmetric information	1667
6.6.	Equilibrium asset pricing models	1668
6.7.	Extended notions of spanning	1668
6.8.	Asset pricing with “frictions”	1668
6.9.	Technical references on continuous-time models	1669
6.10.	Derivative asset pricing	1669
6.11.	Infinite horizon recursive models	1670
6.12.	Estimation	1670
	<b>Appendix: Stochastic integration</b>	1670
	<b>References</b>	1673

*Chapter 32*

**Sunspot Equilibria in Sequential Markets Models**

PIERRE ANDRÉ CHIAPPORI and ROGER GUESNERIE

1683

<b>1. Introduction</b>	1684
1.1. Sunspot equilibria in the broader perspective of general equilibrium with rational expectations	1684
1.2. May sunspot matter? An overview	1686
1.3. Sunspot equilibria in infinite horizon sequential models: an introductory example	1693
<b>2. The framework under consideration</b>	1697
2.1. The model	1697
2.2. Rational expectations and sunspot equilibria	1701
<b>3. Existence of sunspot equilibria: invariant set arguments</b>	1706
3.1. The invariant set argument: weak version	1706
3.2. The invariant set argument: strong version	1708
<b>4. Indeterminacy of the stationary state and local sunspot equilibria</b>	1715
4.1. Sunspot equilibria in linear models	1716
4.2. Equivalence between indeterminacy of the steady state and existence of local sunspot equilibria	1721
<b>5. Existence of sunspot equilibria: other arguments</b>	1726
5.1. Continuity arguments: the implicit function theorem	1726
5.2. Dynamical systems and heteroclinic sunspot equilibria	1729
<b>6. Structure of sunspot equilibria: the differential approaches</b>	1734
6.1. Differential topology and the Poincaré–Hopf theorem	1734
6.2. Bifurcation theory	1741
<b>7. Extensions</b>	1744
7.1. Intrinsic versus extrinsic uncertainty	1744
7.2. Learning	1748
7.3. Models with memory	1751
<b>Appendix: Some examples of the general model</b>	1754
<b>References</b>	1758

*Chapter 33*

**Utility Theory with Uncertainty**

EDI KARNI and DAVID SCHMEIDLER

1763

<b>Part 1: Introduction</b>	1765
<b>1. Decision making under risk and under uncertainty</b>	1765
1.1. The problem defined	1765
1.2. The analytical framework	1765
1.3. The main results	1767

<b>Part 2: Utility theory with risk</b>	1768
<b>2. Expected utility theory</b>	1768
2.1. Preliminaries	1768
2.2. Archimedean axiom	1769
2.3. Independence axiom	1769
2.4. Theorem (von Neumann–Morgenstern)	1769
2.5. Remarks	1770
2.6. Integral representation	1770
2.7. Bibliographical notes	1771
<b>3. Non-expected utility theories</b>	1771
3.1. Motivation	1771
3.2. Functional representation of preference relations on lotteries	1772
3.3. Utility theories with the betweenness property	1773
3.4. Expected utility with rank-dependent probabilities	1777
3.5. Local expected utility analysis	1781
<b>4. Dynamic consistency</b>	1786
4.1. The problem defined	1786
4.2. Atemporal sequential choice	1787
4.3. Temporal sequential choice	1790
<b>Part 3: Utility theory with uncertainty</b>	1792
<b>5. Expected utility theory with subjective probabilities</b>	1792
5.1. Preliminaries	1792
5.2. Savage's axioms	1794
5.3. Theorem (Savage)	1795
5.4. The Anscombe–Aumann approach	1796
5.5. Topologically connected space of consequences	1798
5.6. State dependent preferences	1800
<b>6. Expected utility with non-additive subjective probabilities</b>	1802
6.1. Motivation	1802
6.2. Expected utility with non-additive probabilities	1804
6.3. Uncertainty aversion and the maximin criterion	1805
6.4. Purely subjective non-additive probabilities	1807
6.5. Comonotonic independence and topologically connected space of consequences	1809
6.6. Reduction of uncertainty to risk	1810
<b>Part 4: Attitudes toward risk</b>	1811
<b>7. The theory of risk aversion</b>	1811
7.1. The need for measures	1811
7.2. Preliminaries	1811
7.3. The Arrow–Pratt theory of risk aversion	1812
7.4. Aversion to one risk in the presence of others	1814

7.5. Multivariate risk aversion and risk aversion with state-dependent preferences	1817
7.6. Risk aversion with non-linear preferences	1822
References	1826

*Chapter 34*

**Equilibrium Theory in Infinite Dimensional Spaces**

ANDREU MAS-COLELL and WILLIAM R. ZAME	1835
1. Introduction	1836
2. The essential mathematical structures	1838
3. Basic assumptions	1842
4. Preferences and continuity	1843
5. Prices	1847
6. The main difficulties	1849
6.1. Compactness	1849
6.2. Supportability	1852
6.3. Joint continuity	1853
7. The basic fixed point argument	1854
8. Interior consumption and $L_\infty$	1859
9. Properness and general commodity spaces	1864
9.1. One consumer	1864
9.2. Several consumers	1867
10. The order ideal $L(\omega)$	1871
11. Separable utilities and the finance model	1874
12. The lattice structure of the price space	1876
13. Other approaches	1879
14. Production	1882
15. Final comments	1888
References	1890

*Chapter 35*

**Overlapping Generations**

JOHN D. GEANAKOPOLOS and HERAKLIS M. POLEMARCHAKIS	1899
0. Introduction	1900
1. The economy	1903
1.1. The temporal and demographic structure	1910
2. The existence of competitive equilibria	1915
2.1. Truncations	1917
3. The optimality of equilibrium allocations	1926
4. Aggregate revenue at equilibrium	1937
5. Stationary economies and cycles	1940

6. Indeterminacy	1943
7. Implications for macroeconomics	1946
References	1948

*Chapter 36***Equilibrium Analysis with Non-Convex Technologies**

DONALD J. BROWN	1963
1. Introduction	1964
2. Existence	1974
3. Local uniqueness and computation	1984
4. Optimality	1988
References	1992

*Chapter 37***Monopolistic Competition**

JEAN-PASCAL BÉNASSY	1997
1. Introduction	1999
2. History	2000
2.1. The basic framework	2000
2.2. Cournot	2000
2.3. Bertrand	2001
2.4. Edgeworth	2001
3. A basic model and existence problems	2003
3.1. A basic Chamberlinian model	2003
3.2. A first existence problem	2005
3.3. The Edgeworth problem	2005
3.4. The Chamberlinian model with entry	2007
3.5. Further reading	2009
4. How competitive is monopolistic competition?	2009
4.1. The Cournot equilibrium and market size	2009
4.2. The traditional Chamberlinian model and substitutability	2010
4.3. Bertrand–Edgeworth and market size	2011
4.4. The Chamberlinian model revisited	2013
4.5. Further reading	2015
5. Endogenous product differentiation	2015
5.1. The modelling of product differentiation and entry: a first approach	2015
5.2. Product differentiation: a general view	2018
5.3. Spatial monopolistic competition	2019
5.4. Competitiveness	2020
5.5. Efficiency	2021
5.6. Zero profits	2022
5.7. Further reading	2024

<b>6. General equilibrium representations</b>	2024
6.1. General framework	2024
6.2. Subjective demand curves	2025
6.3. Objective demand curve: Cournot	2026
6.4. Objective demand curve with price makers	2028
6.5. Further reading	2030
<b>7. Monopolistic competition and macroeconomic issues</b>	2032
7.1. The model	2032
7.2. Objective demand curves	2033
7.3. Equilibrium: definition and characterization	2035
7.4. Underemployment, underproduction and inefficiency	2037
7.5. Neutrality of monetary policy	2038
7.6. Further reading	2039
<b>8. Conclusions</b>	2039
<b>References</b>	2040

*Chapter 38*

**Computation and Multiplicity of Equilibria**

TIMOTHY J. KEHOE

2049

<b>1. Introduction</b>	2051
<b>2. Static exchange economies</b>	2051
2.1. Existence of equilibrium	2052
2.2. Scarf's algorithm	2055
2.3. The global Newton method	2057
2.4. Regularity and the index theorem	2059
2.5. Path following methods	2061
2.6. Multiplicity of equilibria	2065
2.7. Other computational methods	2068
<b>3. Equilibrium and optimization</b>	2072
3.1. Welfare theory and existence of equilibrium	2072
3.2. Computation and multiplicity of equilibria	2075
<b>4. Static production economies</b>	2078
4.1. Existence of equilibrium	2078
4.2. The index theorem and multiplicity of equilibria	2082
4.3. A tâtonnement method	2085
4.4. Computation in the space of factor prices	2086
<b>5. Economies with a finite number of infinitely lived consumers</b>	2089
5.1. Deterministic exchange economies	2089
5.2. Dynamic production economies and dynamic programming	2092
5.3. Stochastic economies	2099
5.4. Differentiability and regularity	2102
5.5. Computational methods	2103

6. Overlapping generations economies	2112
6.1. Existence of equilibrium	2112
6.2. Multiplicity of equilibria	2115
6.3. Computational methods	2122
7. Economies with taxes and externalities	2127
7.1. Static economies with taxes	2127
7.2. Dynamic economies with taxes and externalities	2131
7.3. Characterizing equilibria as solutions to optimization problems	2134
References	2137

### Chapter 39

## Non-Standard Analysis with Applications to Economics

ROBERT M. ANDERSON	2145
1. Non-standard analysis	2147
1.1. Introduction	2147
1.2. When is non-standard analysis useful?	2147
1.3. Ideal elements	2149
1.4. The ultraproduct construction	2150
1.5. Internal and external sets	2152
1.6. Notational conventions	2154
1.7. Standard models	2154
1.8. Superstructure embeddings	2156
1.9. A formal language	2157
1.10. Transfer principle	2157
1.11. Saturation	2158
1.12. Internal definition principle	2159
1.13. Non-standard extensions: enough already with the ultraproducts	2160
1.14. Hyperfinite sets	2160
1.15. Non-standard theorems have standard proofs	2161
2. Euclidean, metric and topological spaces	2161
2.1. Monads	2162
2.2. Open and closed sets	2164
2.3. Compactness	2165
2.4. Products	2167
2.5. Continuity	2168
2.6. Differentiation	2171
2.7. Riemann integration	2171
2.8. Ordinary differential equations	2172
3. Loeb measure	2173
3.1. Existence of Loeb measure	2173
3.2. Construction of Lebesgue measure	2175
3.3. Representation of Radon measures	2176

3.4. Lifting theorems	2177
3.5. Weak convergence	2178
4. Large economies	2179
4.1. Preferences	2180
4.2. Hyperfinite exchange economies	2182
4.3. Loeb measure economies	2182
4.4. Budget, support and demand gaps	2183
4.5. Core	2184
4.6. Other work in large economies	2198
5. Continuum of random variables	2198
5.1. The problem	2198
5.2. A continuum of random variables on a Loeb space	2199
5.3. Keisler's price adjustment model	2201
6. Translation of non-standard proofs	2203
7. Further reading	2205
References	2205

*Chapter 40*

<b>Non-Linear Dynamical Systems: Instability and Chaos in Economics</b>	
WILLIAM A. BROCK and W. DAVIS DECHERT	2209
1. Introduction	2210
2. The mathematics of chaos and the emergence of chaos in dynamical systems	2211
2.1. Period doubling route to chaos	2211
2.2. Liapunov exponents	2212
2.3. Chaotic dynamics	2213
2.4. Examples of chaotic dynamics and attractors	2215
2.5. Period three implies chaos	2217
2.6. Structural stability	2218
3. Chaotic equilibrium dynamics	2219
3.1. Chaos in overlapping generations models	2221
3.2. Chaos in growth models	2223
4. Detection of chaos in dynamic time series	2224
4.1. Reconstruction of the dynamics	2224
4.2. Fractal dimension	2226
5. Statistical inference theory for chaotic and non-linear dynamics	2228
5.1. BDS test	2228
5.2. Model misspecification tests	2230
5.3. Testing for deterministic versus stochastic data	2231
References	2233
Index	2237
